B.E CSE-ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

(Regulation 2024)

ARUNAI ENGINEERING COLLEGE, TIRUVANNAMALAI

(An Autonomous Institution)

**REGULATION 2024
CHOICE BASED CREDIT SYSTEM**

B.E CSE -ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

Graduates can

PEO1: Apply their technical competence in computer science to solve real world problems, with technical and people leadership.

PEO2: Conduct cutting edge research and develop solutions on problems of social relevance

PEO3: Work in a business environment, exhibiting team skills, work ethics, adaptability and lifelong learning.

PROGRAM OUTCOMES (POS)

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

PO5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

PO6: The Engineer and The World:Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

HoD/BOS Chairman

Principal

PO8: Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

WASHINGTON ACCORD KNOWLEDGE AND ATTITUDE PROFILE (WKS)

WK1: A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.

WK2: Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.

WK3: A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.

WK4: Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.

WK5: Knowledge, including efficient resource use, environmental impacts, whole-life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.

WK6: Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.

WK7: Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.

WK8: Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.

WK9: Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

PROGRAM SPECIFIC OUTCOMES (PSO)

Graduates should be able to:

PSO1: Exhibit design and programming skills to build and automate business solutions using cutting edge technologies.

PSO2: Strong theoretical foundation leading to excellence and excitement towards research, to provide elegant solutions to complex problems.

PSO3: Create, select and apply the theoretical knowledge of AI and Data Analytics along with practical industrial tools and techniques to manage and solve wicked societal problems.

SEMESTER- I

Subject Code	Subject Name	Category	L	T	P	C
IP24101	INDUCTION PROGRAMME		0	0	0	0

This is a mandatory 2 week programme to be conducted as soon as the students enter the institution. Normal classes start only after the induction program is over.

The induction programme has been introduced by AICTE with the following objective:

“Engineering colleges were established to train graduates well in the branch/department of admission,

HoD/BOS Chairman

Principal

have a holistic outlook, and have a desire to work for national needs and beyond. The graduating student must have knowledge and skills in the area of his/her study. However, he/she must also have a broad understanding of society and relationships. Character needs to be nurtured as an essential quality by which he/she would understand and fulfill his/her responsibility as an engineer, a citizen and a human being. Besides the above, several meta-skills and underlying values are needed.”

“One will have to work closely with the newly joined students in making them feel comfortable, allow them to explore their academic interests and activities, reduce competition and make them work for excellence, promote bonding within them, build relations between teachers and students, give a broader view of life, and build character. “

Hence, the purpose of this programme is to make the students feel comfortable in their new environment, open them up, set a healthy daily routine, create bonding in the batch as well as between faculty and students, develop awareness, sensitivity and understanding of the self, people around them, society at large, and nature.

The following are the activities under the induction program in which the student would be fully engaged throughout the day for the entire duration of the program.

(i) Physical Activity

This would involve a daily routine of physical activity with games and sports, yoga, gardening, etc.

(ii) Creative Arts

Every student would choose one skill related to the arts whether visual arts or performing arts. Examples are painting, sculpture, pottery, music, dance etc. The student would pursue it everyday for the duration of the program. These would allow for creative expression. It would develop a sense of aesthetics and also enhance creativity which would, hopefully, grow into engineering design later.

(iii) Universal Human Values

This is the anchoring activity of the Induction Programme. It gets the student to explore oneself and allows one to experience the joy of learning, stand up to peer pressure, take decisions with courage, be aware of relationships with colleagues and supporting stay in the hostel and department, be sensitive to others, etc. A module in Universal Human Values provides the base. Methodology of teaching this content is extremely important. It must not be through do's and don't's, but get students to explore and think by engaging them in a dialogue. It is best taught through group discussions and real life activities rather than lecturing. Discussions would be conducted in small groups of about 20 students with a faculty mentor each. It would be effective that the faculty mentor assigned is also the faculty advisor for the student for the full duration of the UG programme.

(iv) Literary Activity

Literary activity would encompass reading, writing and possibly, debating, enacting a play etc.

(v) Proficiency Modules

This would address some lacunas that students might have, for example, English, computer

familiarity etc.

(vi) Lectures by Eminent People

Motivational lectures by eminent people from all walks of life should be arranged to give the students exposure to people who are socially active or in public life.

(vii) Visits to Local Area

A couple of visits to the landmarks of the city, or a hospital or orphanage could be organized. This would familiarize them with the area as well as expose them to the under privileged.

(viii) Familiarization to Dept./Branch & Innovations

They should be told about what getting into a branch or department means what role it plays in society, through its technology. They should also be shown the laboratories, workshops & other facilities.

(ix) Department Specific Activities

About a week can be spent in introducing activities (games, quizzes, social interactions, small experiments, design thinking etc.) that are relevant to the particular branch of Engineering/Technology/Architecture that can serve as a motivation and kindle interest in building things (become a maker) in that particular field. This can be conducted in the form of a workshop. For example, CSE and IT students may be introduced to activities that kindle computational thinking, and get them to build simple games. ECE students may be introduced to building simple circuits as an extension of their knowledge in Science, and so on. Students may be asked to build stuff using their knowledge of science.

Induction Programme is totally an activity based programme and therefore there shall be no tests / assessments during this programme

References:

Guide to Induction program from AICTE

Subject Code	Subject Name	Category	L	T	P	C
HS24101	PROFESSIONAL ENGLISH- I	HSMC	3	0	0	3
Course Objectives:						
• To improve the communicative competence of learners						
• To learn to use basic grammatic structures in suitable contexts						
• To acquire lexical competence and use them appropriately in a sentence and understand their meaning in a text						
• To help learners use language effectively in professional contexts						
• To develop learners' ability to read and write complex texts, summaries, articles, blogs, definitions, essays and user manuals.						

HoD/BOS Chairman

Principal

UNIT – I	INTRODUCTION TO EFFECTIVE COMMUNICATION	1
What is effective communication? (Explain using activities) Why is communication critical for excellence during study, research and work? What are the seven C's of effective communication? What are key language skills? What is effective listening? What does it involve? What is effective speaking? What does it mean to be an excellent reader? What should you be able to do? What is effective writing? How does one develop language and communication skills? What does the course focus on? How are communication and language skills going to be enhanced during this course? What do you as a learner need to do to enhance your English language and communication skills to get the best out of this course?		
INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION		8
Reading - Reading brochures (technical context), telephone messages / social media messages relevant to technical contexts and emails. Writing - Writing emails / letters introducing oneself. Grammar - Present Tense (simple and progressive); Question types: Wh/ Yes or No/ and Tags. Vocabulary - Synonyms; One word substitution; Abbreviations & Acronyms (as used in technical contexts).		
UNIT – II	NARRATION AND SUMMATION	9
Reading - Reading biographies, travelogues, newspaper reports, Excerpts from literature, and travel & technical blogs. Writing - Guided writing-- Paragraph writing Short Report on an event (field trip etc.) Grammar –Past tense (simple); Subject-Verb Agreement; and Prepositions. Vocabulary - Word forms (prefixes& suffixes); Synonyms and Antonyms. Phrasal verbs.		
UNIT – III	DESCRIPTION OF A PROCESS / PRODUCT	9
Reading – Reading advertisements, gadget reviews; user manuals. Writing - Writing definitions; instructions; and Product /Process description. Grammar - Imperatives; Adjectives; Degrees of comparison; Present & Past Perfect Tenses. Vocabulary - Compound Nouns, Homonyms; and Homophones, discourse markers (connectives & sequence words).		
UNIT – IV	CLASSIFICATION AND RECOMMENDATIONS	9
Reading – Newspaper articles; Journal reports –and Non Verbal Communication (tables, pie charts etc.). Writing – Note-making / Note-taking (*Study skills to be taught, not tested); Writing recommendations; Transferring information from nonverbal (chart , graph etc, to verbal mode) Grammar – Articles; Pronouns - Possessive & Relative pronouns. Vocabulary - Collocations; Fixed / Semi fixed expressions.		
UNIT – V	EXPRESSION	9
Reading – Reading editorials; and Opinion Blogs; Writing – Essay Writing (Descriptive or narrative). Grammar – Future Tenses, Punctuation; Negation (Statements & Questions); and Simple, Compound & Complex Sentences. Vocabulary - Cause & Effect Expressions – Content vs Function words.		
		Total Contact Hours : 45

Course Outcomes:	At the end of the course, learners will be able
CO1:	To use appropriate words in a professional context
CO2:	To gain understanding of basic grammatical structures and use them in right context.
CO3:	To read and infer the denotative and connotative meanings of technical texts
CO4:	To write definitions, descriptions, narrations and essays on various topics

Textbooks:	
1.	English for Engineers & Technologists Orient Blackswan Private Ltd. Department of English, Anna University, (2020 edition)
2.	English for Science & Technology Cambridge University Press, 2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Jovani, Department of English, Anna University.

Subject Code	Subject Name	Category	L	T	P	C
MA24101	MATRICES AND CALCULUS	BSC	3	1	0	4

Course Objectives:

- To develop the use of matrix algebra techniques that are needed by engineers for practical applications
- To familiarize the students with differential calculus.
- To familiarize the student with functions of several variables. This is needed in many branches of engineering.
- To make the students understand various techniques of integration
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their applications

UNIT – I	MATRICES	9+3
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley - Hamilton theorem – Diagonalization of matrices by orthogonal transformation – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms – Applications: Stretching of an elastic membrane.		
UNIT – II	DIFFERENTIAL CALCULUS	9+3
Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules (sum, product, quotient, chain rules) - Implicit differentiation - Logarithmic differentiation - Applications : Maxima and Minima of functions of one variable.		
UNIT – III	FUNCTIONS OF SEVERAL VARIABLES	9+3
Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor’s series for functions of two variables – Applications : Maxima and minima of functions of two variables and Lagrange’s method of undetermined multipliers.		
UNIT – IV	INTEGRAL CALCULUS	9+3
Definite and Indefinite integrals - Substitution rule - Techniques of Integration : Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals - Applications : Hydrostatic force and pressure, moments and centres of mass.		
UNIT – V	MULTIPLE INTEGRALS	9+3
Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals – Applications: Moments and centres of mass, moment of inertia.		
		Total Contact Hours : 60

Course Outcomes:	At the end of the course the students will be able to:
CO1:	Use the matrix algebra methods for solving practical problems.
CO2:	Apply differential calculus tools in solving various application problems.
CO3:	Able to use differential calculus ideas on several variable functions.
CO4:	Apply different methods of integration in solving practical problems.
CO5:	Apply multiple integral ideas in solving areas, volumes and other practical problems.

Subject Code	Subject Name	Category	L	T	P	C
PH24101	ENGINEERING PHYSICS	BSC	3	0	0	3
Course Objectives:						
- To make the students effectively to achieve an understanding of mechanics. - To enable the students to gain knowledge of electromagnetic waves and its applications.						

HoD/BOS Chairman

Principal

• To introduce the basics of oscillations, optics and lasers.
• Equipping the students to be successfully understand the importance of quantum physics.
• To motivate the students towards the applications of quantum mechanics.

UNIT I	MECHANICS	9
Multiparticle dynamics: Center of mass (CM) – CM of continuous bodies – motion of the CM – kinetic energy of system of particles. Rotation of rigid bodies: Rotational kinematics – rotational kinetic energy and moment of inertia - theorems of M .I –moment of inertia of continuous bodies – M.I of a diatomic molecule - torque – rotational dynamics of rigid bodies – conservation of angular momentum – rotational energy state of a rigid diatomic molecule - gyroscope - torsional pendulum – double pendulum –Introduction to nonlinear oscillations.		
UNIT II	ELECTROMAGNETIC WAVES	9
The Maxwell's equations - wave equation; Plane electromagnetic waves in vacuum, Conditions on the wave field - properties of electromagnetic waves: speed, amplitude, phase, orientation and waves in matter - polarization - Producing electromagnetic waves - Energy and momentum in EM waves: Intensity, waves from localized sources, momentum and radiation pressure - Cell-phone reception. Reflection and transmission of electromagnetic waves from a non-conducting medium- vacuum interface for normal incidence.		
UNIT III	OSCILLATIONS, OPTICS AND LASERS	9
Simple harmonic motion - resonance –analogy between electrical and mechanical oscillating systems - waves on a string - standing waves - traveling waves - Energy transfer of a wave - sound waves - Doppler effect. Reflection and refraction of light waves - total internal reflection - interference –Michelson interferometer –Theory of air wedge and experiment.Theory of laser - characteristics- Spontaneous and stimulated emission - Einstein's coefficients - population inversion - Nd-YAG laser, CO ₂ laser, semiconductor laser –Basic applications of lasers in industry.		
UNIT IV	BASIC QUANTUM MECHANICS	9
Photons and light waves - Electrons and matter waves –Compton effect - The Schrodinger equation (Time dependent and time independent forms) - meaning of wave function - Normalization –Free particle - particle in a infinite potential well: 1D,2D and 3D Boxes- Normalization, probabilities and the correspondence principle.		
UNIT V	APPLIED QUANTUM MECHANICS	9
The harmonic oscillator(qualitative)- Barrier penetration and quantum tunneling(qualitative)- Tunneling microscope - Resonant diode - Finite potential wells (qualitative)- Bloch's theorem for particles in a periodic potential –Basics of Kronig-Penney model and origin of energy bands.		
		Total Contact Hours : 45

Course Outcomes:	After completion of this course students should be able to:
CO1:	Understand the importance of mechanics.
CO2:	Express their knowledge in electromagnetic waves.
CO3:	Demonstrate a strong foundational knowledge in oscillations, optics and lasers.
CO4:	Understand the importance of quantum physics.
CO5:	Comprehend and apply quantum mechanical principles towards the formation of energy bands.

Subject Code	Subject Name	Category	L	T	P	C
CY24101	ENGINEERING CHEMISTRY	BSC	3	0	0	3
Course Objectives:						
To inculcate sound understanding of water quality parameters and water treatment techniques.						
To impart knowledge on the basic principles and preparatory methods of nanomaterials.						
To introduce the basic concepts and applications of phase rule and composites.						
To facilitate the understanding of different types of fuels, their preparation, properties and combustion characteristics.						
To familiarize the students with the operating principles, working processes and applications of energy conversion and storage devices.						

UNIT– I	WATER AND ITS TREATMENT	9
Water: Sources and impurities, Water quality parameters: Definition and significance of-color, odour, turbidity, pH, hardness, alkalinity, TDS, COD and BOD, fluoride and arsenic. Municipal water treatment: primary treatment and disinfection (UV, Ozonation, break-point chlorination). Desalination of brackish water: Reverse Osmosis. Boiler troubles: Scale and sludge, Boiler corrosion, Caustic embrittlement,		

HoD/BOS Chairman

Principal

Priming & foaming. Treatment of boiler feed water: Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) and External treatment – Ion exchange demineralization and zeolite process.		
UNIT– II	NANOCHEMISTRY	9
Basics: Distinction between molecules, nanomaterials and bulk materials; Size-dependent properties (optical, electrical, mechanical and magnetic); Types of nanomaterials: Definition, properties and uses of – nanoparticle, nanocluster, nanorod, nanowire and nanotube. Preparation of nanomaterials: sol-gel, solvothermal, laser ablation, chemical vapour deposition, electrochemical deposition and electro spinning. Applications of nanomaterials in medicine, agriculture, energy, electronics and catalysis.		
UNIT– III	PHASE RULE AND COMPOSITES	9
Phase rule: Introduction, definition of terms with examples. One component system - water system; Reduced phase rule; Construction of a simple eutectic phase diagram - Thermal analysis; Two component system: lead-silver system - Pattinson process. Composites: Introduction: Definition & Need for composites; Constitution: Matrix materials (Polymer matrix, metal matrix and ceramic matrix) and Reinforcement (fiber, particulates, flakes and whiskers). Properties and applications of: Metal matrix composites (MMC), Ceramic matrix composites and Polymer matrix composites. Hybrid composites - definition and examples.		
UNIT – IV	FUELS AND COMBUSTION	9
Fuels: Introduction: Classification of fuels; Coal and coke: Analysis of coal (proximate and ultimate), Carbonization, Manufacture of metallurgical coke (Otto Hoffmann method). Petroleum and Diesel: Manufacture of synthetic petrol (Bergius process), Knocking - octane number, diesel oil - cetane number; Power alcohol and biodiesel. Combustion of fuels: Introduction: Calorific value - higher and lower calorific values, Theoretical calculation of calorific value; Ignition temperature: spontaneous ignition temperature, Explosive range; Flue gas analysis - ORSAT Method. CO ₂ emission and carbon footprint.		
UNIT – V	ENERGY SOURCES AND STORAGE DEVICES	9
Stability of nucleus: mass defect (problems), binding energy; Nuclear energy: light water nuclear power plant, breeder reactor. Solar energy conversion: Principle, working and applications of solar cells; Recent developments in solar cell materials. Wind energy; Geothermal energy; Batteries: Types of batteries, Primary battery - dry cell, Secondary battery - lead acid battery and lithium-ion battery; Electric vehicles - working principles; Fuel cells: H ₂ -O ₂ fuel cell, microbial fuel cell; Supercapacitors: Storage principle, types and examples.		
		Total Contact Hours : 45

Course Outcomes:	At the end of the course, the students will be able to :
CO1:	To infer the quality of water from quality parameter data and propose suitable treatment methodologies to treat water.
CO2:	To identify and apply basic concepts of nanoscience and nanotechnology in designing the synthesis of nanomaterials for engineering and technology applications.
CO3:	To apply the knowledge of phase rule and composites for material selection requirements.
CO4:	To recommend suitable fuels for engineering processes and applications.
CO5:	To recognize different forms of energy resources and apply them for suitable applications in energy sectors.

GE24101	PROBLEM SOLVING AND PYTHON PROGRAMMING	ESC	3	0	0	3

Course Objectives:

- To understand the basics of algorithmic problem solving.
- To learn to solve problems using Python conditionals and loops.
- To define Python functions and use function calls to solve problems.
- To use Python data structures - lists, tuples, dictionaries to represent complex data.
- To do input/output with files in Python.

UNIT- I	COMPUTATIONAL THINKING AND PROBLEM SOLVING	9
Fundamentals of Computing – Identification of Computational Problems -Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.		

HoD/BOS Chairman

Principal

UNIT– II	DATA TYPES, EXPRESSIONS, STATEMENTS	9
Python interpreter and interactive mode, debugging; values and types: int, float, boolean, string , and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.		
UNIT– III	CONTROL FLOW, FUNCTIONS, STRINGS	9
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.		
UNIT – IV	LISTS, TUPLES, DICTIONARIES	9
Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: simple sorting, histogram, Students marks statement, Retail bill preparation.		
UNIT – V	FILES, MODULES, PACKAGES	9
Files and exceptions: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file, Voter's age validation, Marks range validation (0-100).

GE24102	HERITAGE OF TAMILS	HSMC	1	0	0	1

Course Objectives:

- To appreciate Tamil art, culture and literature
- To learn the history and culture of Tamil language
- To relate to various art forms and their relevance to development
- To acknowledge the rich heritage and significant achievements of the Tamilians
- To appreciate the contribution of Tamilians to nation building

UNIT- I	LANGUAGE AND LITERATURE	3
Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.		
UNIT- II	HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE	3
Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.		
UNIT- III	FOLK AND MARTIAL ARTS	3
Therukoothu, Karagattam, VilluPattu, KaniyanKoothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.		
UNIT – IV	THINAI CONCEPT OF TAMILS	3
Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.		
UNIT – V	CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE	3
Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

Subject Code	Subject Name	Category	L	T	P	C
GE24111	PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY	ESC	0	0	4	2

Course Objectives:

• To understand the problem-solving approaches.
• To learn the basic programming constructs in Python.
• To practice various computing strategies for Python-based solutions to real-world problems.
• To use Python data structures such as lists, tuples, and dictionaries.
• To perform input/output operations with files in Python.

EXPERIMENTS:

Note: The examples suggested in each experiment are only indicative. The lab instructor is expected to design other problems on similar lines. The Examination shall not be restricted to the sample experiments listed here.

LABORATORY / PRACTICAL ACTIVITIES

HoD/BOS Chairman

Principal

1. Identification and solving of simple real life or scientific or technical problems, and developing flow charts for the same. (Electricity Billing, Retail shop billing, Sin series, weight of a motorbike, Weight of a steel bar, compute Electrical Current in Three Phase AC Circuit, etc.)
2. Python programming using simple statements and expressions (exchange the values of two variables, circulate the values of n variables, distance between two points).
3. Scientific problems using Conditionals and Iterative loops. (Number series, Number Patterns, pyramid pattern)
4. Implementing real-time/technical applications using Lists, Tuples. (Items present in a library/Components of a car/ Materials required for construction of a building –operations of list & tuples)
5. Implementing real-time/technical applications using Sets, Dictionaries. (Language, components of an automobile, Elements of a civil structure, etc.- operations of Sets & Dictionaries)
6. Implementing programs using Functions. (Factorial, largest number in a list, area of shape)
7. Implementing programs using Strings. (reverse, palindrome, character count, replacing characters)
8. Implementing programs using written modules and Python Standard Libraries (pandas, numpy. Matplotlib, scipy)
9. Implementing real-time/technical applications using File handling. (copy from one file to another, word count, longest word)
10. Implementing real-time/technical applications using Exception handling. (divide by zero error, voter's age validity, student mark range validation)
11. Exploring Pygame tool.
12. Developing a game activity using Pygame like bouncing ball, car race etc.
Total Contact Hours :60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Develop algorithmic solutions to simple computational problems.
CO2:	Develop and execute simple Python programs.
CO3:	Implement Python programs using conditionals and loops to solve real-world problems.
CO4:	Deploy functions to decompose a Python program.
CO5:	Process compound data using Python data structures.
CO6:	Utilize Python packages in developing software applications.

Subject Code	Subject Name	Category	L	T	P	C
BS24111	PHYSICS AND CHEMISTRY LABORATORY	BSC	0	0	4	2
PHYSICS LABORATORY:(Any Seven Experiments)						
Course Objectives:						
- To learn the proper use of various kinds of physics laboratory equipment. - To learn how data can be collected, presented and interpreted in a clear and concise manner. - To learn problem solving skills related to physics principles and interpretation of experimental data. - To determine error in experimental measurements and techniques used to minimize such error. - To make the student an active participant in each part of all lab exercises.						

LIST OF EXPERIMENTS:

1.	Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of regular and irregular objects.
2.	Simple harmonic oscillations of cantilever.
3.	Non-uniform bending - Determination of Young's modulus
4.	Uniform bending – Determination of Young's modulus
5.	Laser- Determination of the wavelength of the laser using grating
6.	Air wedge - Determination of thickness of a thin sheet/wire
7.	a) Optical fibre -Determination of Numerical Aperture and acceptance angle
	b) Compact disc- Determination of width of the groove using laser.
8.	Acoustic grating- Determination of velocity of ultrasonic waves in liquids.
9.	Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10.	Post office box -Determination of Band gap of a semiconductor.
11.	Photoelectric effect
12.	Michelson Interferometer.
13.	Melde's string experiment
14.	Experiment with lattice dynamics kit.

	Total Contact Hours :30
Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the functioning of various physics laboratory equipment.
CO2:	Use graphical models to analyze laboratory data.
CO3:	Use mathematical models as a medium for quantitative reasoning and describing physical reality.

HoD/BOS Chairman

Principal

CO4:	Access, process and analyze scientific information.
CO5:	Solve problems individually and collaboratively.

CHEMISTRY LABORATORY: (Any seven experiments to be conducted)
Course Objectives:
- To inculcate experimental skills to test basic understanding of water quality parameters such as acidity, alkalinity, hardness, dissolved oxygen (DO), chloride, and copper. - To induce the students to familiarize with electroanalytical techniques such as, pH metry, potentiometry and conductometry in the determination of impurities in aqueous solutions. - To demonstrate the analysis of metals and alloys. - To demonstrate the synthesis of nanoparticles.

Laboratory / Practical Activities:
- Preparation of (Na_2CO_3) as a primary standard and Estimation of acidity of a water sample using the prepared primary standard. - Determination of types and amount of alkalinity in a water sample. - Determination of total, temporary, and permanent hardness of water by EDTA method. - Determination of DO content of a water sample by Winkler's method. - Determination of chloride content of a water sample by Argentometric method. - Estimation of copper content in the given solution by Iodometry. - Estimation of total dissolved solids (TDS) of a water sample by gravimetry. - Determination of strength of given hydrochloric acid using a pH meter. - Determination of strength of acids in a mixture using a conductivity meter. - Conductometric titration of barium chloride against sodium sulphate (precipitation titration). - Estimation of iron content in a given solution using a potentiometer. - Estimation of sodium or potassium present in water using a flame photometer. - Preparation of nanoparticles (TiO_2 / ZnO / CuO) by Sol-Gel method. - Estimation of nickel in steel. - Proximate analysis of coal.
Total Contact Hours : 30

Course Outcomes:	Upon completion of the course,the students should be able to:
CO1:	To analyse the quality of water samples with respect to their acidity, alkalinity, hardness and DO.
CO2:	To determine the amount of metal ions through volumetric and spectroscopic

HoD/BOS Chairman

Principal

	techniques
CO3:	To analyse and determine the composition of alloys.
CO4:	To learn simple method of synthesis of nanoparticles
CO5:	To quantitatively analyse the impurities in solution by electroanalytical techniques

Subject Code	Subject Name	Category	L	T	P	C
GE24112	ENGLISH LABORATORY	EEC	0	0	2	1
Course Objectives:						
To improve the communicative competence of learners						
To help learners use language effectively in academic /work contexts						
To develop various listening strategies to comprehend various types of audio materials like lectures, discussions, videos etc.						
To build on students' English language skills by engaging them in listening, speaking and grammar learning activities that are relevant to authentic contexts.						
To use language efficiently in expressing their opinions via various media.						

UNIT- I	INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION	6
Listening for general information-specific details- conversation: Introduction to classmates - Audio / video (formal & informal); Telephone conversation; Listening to voicemail & messages; Listening and filling a form. Speaking - making telephone calls-Self Introduction; Introducing a friend; -politeness strategies-making polite requests, making polite offers, replying to polite requests and offers- understanding basic instructions(filling out a bank application for example).		
UNIT- II	NARRATION AND SUMMATION	6
Listening - Listening to podcasts, anecdotes / stories / event narration; documentaries and interviews with celebrities. Speaking - Narrating personal experiences / events-Talking about current and temporary situations & permanent and regular situations* - describing experiences and feelings- engaging in small talk- describing requirements and abilities.		
UNIT- III	DESCRIPTION OF A PROCESS / PRODUCT	6
Listening - Listen to product and process descriptions; a classroom lecture; and advertisements about products. Speaking – Picture description- describing locations in workplaces- Giving instruction to use the product- explaining uses and purposes- Presenting a product- describing shapes and sizes and weights-talking about quantities(large & small)-talking about precautions.		
UNIT – IV	CLASSIFICATION AND RECOMMENDATIONS	6

HoD/BOS Chairman

Principal

Listening – Listening to TED Talks; Listening to lectures - and educational videos. Speaking – Small Talk; discussing and making plans-talking about tasks-talking about progress- talking about positions and directions of movement-talking about travel preparations- talking about transportation		
UNIT – V	EXPRESSION	6
Listening – Listening to debates/ discussions; different viewpoints on an issue; and panel discussions. Speaking –making predictions- talking about a given topic-giving opinions- understanding a website-describing processes		
		Total Contact Hours :30

Course Outcomes:	At the end of the course,learners will be able
CO1:	To listen to and comprehend general as well as complex academic information
CO2:	To listen to and understand different points of view in a discussion
CO3:	To speak fluently and accurately in formal and informal communicative contexts
CO4:	To describe products and processes and explain their uses and purposes clearly and accurately
CO5:	To express their opinions effectively in both formal and informal discussions

PO & PSO / CO	CO-PO Mapping											CO-PSO Mapping

Average:	3	3	3	3	1	3	3	3	3	3	3	-	-	-

SEMESTER II

Subject Code	Subject Name	Category	L	T	P	C
HS24201	PROFESSIONAL ENGLISH - II	HSMC	2	0	0	2

Course Objectives:

- To engage learners in meaningful language activities to improve their reading and writing skills
- To learn various reading strategies and apply in comprehending documents in professional context
- To help learners understand the purpose, audience, contexts of different types of writing
- To develop analytical thinking skills for problem solving in communicative contexts
- To demonstrate an understanding of job applications and interviews for internship and placements

UNIT – I	MAKING COMPARISONS	6
Reading - Reading advertisements, user manuals, brochures; Writing – Professional emails, Email etiquette - Compare and Contrast Essay; Grammar – Mixed Tenses, Prepositional phrases		
UNIT – II	EXPRESSING CAUSAL RELATIONS IN SPEAKING AND WRITING	6

HoD/BOS Chairman

Principal

Reading - Reading longer technical texts– Cause and Effect Essays, and Letters / emails of complaint, Writing - Writing responses to complaints. Grammar - Active Passive Voice transformations, Infinitive and Gerunds		
UNIT – III	PROBLEM SOLVING	6
Reading - Case Studies, excerpts from literary texts, news reports etc. Writing – Letter to the Editor, Checklists, Problem solution essay / Argumentative Essay. Grammar – Error correction; If conditional sentences		
UNIT – IV	REPORTING OF EVENTS AND RESEARCH	6
Reading –Newspaper articles; Writing – Recommendations, Transcoding, Accident Report, Survey Report Grammar – Reported Speech, Modals Vocabulary – Conjunctions- use of prepositions		
UNIT – V	THE ABILITY TO PUT IDEAS OR INFORMATION COGENTLY	6
Reading – Company profiles, Statement of Purpose, (SOP), an excerpt of interview with professionals; Writing – Job / Internship application – Cover letter & Resume; Grammar – Numerical adjectives, Relative Clauses.		
		Total Contact Hours : 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	To compare and contrast products and ideas in technical texts.
CO2:	To identify and report cause and effects in events, industrial processes through technical texts
CO3:	To analyse problems in order to arrive at feasible solutions and communicate them in the written format.
CO4:	To present their ideas and opinions in a planned and logical manner
CO5:	To draft effective resumes in the context of job search.

Subject Code	Subject Name	Category	L	T	P	C
MA24201	STATISTICS AND NUMERICAL METHODS	BSC	3	1	0	4

Course Objectives:

- This course aims at providing the necessary basic concepts of a few statistical and numerical methods and give procedures for solving numerically different kinds of problems occurring in engineering and technology.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals and numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.

UNIT – I	TESTING OF HYPOTHESIS	9+3
Sampling distributions - Tests for single mean, proportion and difference of means (Large and small samples) – Tests for single variance and equality of variances – Chi square test for goodness of fit – Independence of attributes.		
UNIT – II	DESIGN OF EXPERIMENTS	9+3
One way and two way classifications - Completely randomized design – Randomized block design – Latin square design - 22 factorial design.		
UNIT – III	SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS	9+3
Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method- Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by Power method and Jacobi's method for symmetric matrices.		
UNIT – IV	INTERPOLATION, NUMERICAL DIFFERENTIATION AND NUMERICAL INTEGRATION	9+3
Lagrange's and Newton's divided difference interpolations – Newton's forward and backward difference interpolation – Approximation of derivatives using interpolation polynomials – Numerical single and double integrations using Trapezoidal and Simpson's 1/3 rules.		
UNIT – V	NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS	9+3

HoD/BOS Chairman

Principal

Single step methods: Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order differential equations - Multi step methods: Milne's and Adams - Bash forth predictor corrector methods for solving first order differential equations.	
	Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Apply the concept of testing of hypothesis for small and large samples in real life problems.
CO2:	Apply the basic concepts of classifications of design of experiments in the field of agriculture.
CO3:	Appreciate the numerical techniques of interpolation in various intervals and apply the numerical techniques of differentiation and integration for engineering problems.
CO4:	Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
CO5:	Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.

Subject Code	Subject Name	Category	L	T	P	C
PH24203	PHYSICS FOR INFORMATION SCIENCE	BSC	3	0	0	3
Course Objectives:						
To make the students understand the importance in studying electrical properties of materials						
To enable the students to gain knowledge in semiconductor physics						
To instill knowledge on magnetic properties of materials.						
To establish a sound grasp of knowledge on different optical properties of materials, optical displays and applications						
To inculcate an idea of significance of nano structures, quantum confinement, ensuing nano device applications and quantum computing.						

UNIT – I	ELECTRICAL PROPERTIES OF MATERIALS	9
Classical free electron theory - Expression for electrical conductivity – Thermal conductivity, expression – Wiedemann-Franz law – Success and failures - electrons in metals – Particle in a three dimensional box – degenerate states – Fermi- Dirac statistics – Density of energy states – Electron in periodic potential – Energy bands in solids – tight binding approximation - Electron effective mass – concept of hole		
UNIT – II	SEMI CONDUCTOR PHYSICS	9
Intrinsic Semiconductors – Energy band diagram – direct and indirect band gap semiconductors Carrier concentration in intrinsic semiconductors – extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors – Variation of carrier concentration with temperature – variation of Fermi level with temperature and impurity concentration – Carrier transport in Semiconductor: random motion, drift, mobility and diffusion – Hall effect and devices – Ohmic contacts – Schottky diode		
UNIT – III	MAGNETIC PROPERTIES OF MATERIALS	9
Magnetic dipole moment – atomic magnetic moments- magnetic permeability and susceptibility -Magnetic material classification: diamagnetism – para magnetism – ferromagnetism – antiferro magnetism – ferri magnetism – Ferromagnetism: origin and exchange interaction- saturation magnetization and Curie temperature – Domain Theory- M versus H behaviour – Hard and soft magnetic materials – examples and uses– Magnetic principle in computer data storage – Magnetic hard disc (GMR sensor).		

UNIT – IV	OPTICAL PROPERTIES OF MATERIALS	9
Classification of optical materials – carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode – solar cell - LED – Organic LED – Laser diodes – Optical data storage techniques.		

HOD/BOS Chairman

Principal

UNIT – V	NANODEVICES AND QUANTUM COMPUTING	9
Introduction - quantum confinement – quantum structures: quantum wells, wires and dots — band gap of nanomaterials. Tunneling – Single electron phenomena: Coulomb blockade - resonant-tunneling diode – single electron transistor – quantum cellular automata - Quantum system for information processing - quantum states – classical bits – quantum bits or qubits – CNOT gate - multiple qubits – Bloch sphere – quantum gates – advantage of quantum computing over classical computing		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Gain knowledge on classical and quantum electron theories, and energy band structures
CO2:	Acquire knowledge on basics of semiconductor physics and its applications in various devices
CO3:	Get knowledge on magnetic properties of materials and their applications in data storage,
CO4:	Have the necessary understanding on the functioning of optical materials for optoelectronics
CO5:	Understand the basics of quantum structures and their applications and basics of quantum computing

Text Books:	
1.	Jaspri Singh, “Semiconductor Devices: Basic Principles”, Wiley (Indian Edition), 2007
2.	S.O. Kasap. Principles of Electronic Materials and Devices, McGraw-Hill Education (Indian Edition), 2020
3.	Parag K. Lala, Quantum Computing: A Beginner's Introduction, McGraw-Hill Education (Indian Edition), 2020

Subject Code	Subject Name	Category	L	T	P	C
BE24201	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING	ESC	3	0	0	3

Course Objectives:

- To introduce the basics of electric circuits and analysis
- To impart knowledge in the basics of working principles and application of electrical machines
- To introduce analog devices and their characteristics
- To educate on the fundamental concepts of digital electronics
- To introduce the functional elements and working of measuring instruments

UNIT – I	ELECTRICAL CIRCUITS	9
DC Circuits: Circuit Components: Conductor, Resistor, Inductor, Capacitor – Ohm's Law - Kirchhoff's Laws –Independent and Dependent Sources – Simple problems- Nodal Analysis, Mesh analysis with Independent sources only (Steady state) Introduction to AC Circuits and Parameters: Waveforms, Average value, RMS Value, Instantaneous power, real power, reactive power and apparent power, power factor – Steady state analysis of RLC circuits (Simple problems only)		
UNIT – II	ELECTRICAL MACHINES	9
Construction and Working principle- DC Separately and Self excited Generators, EMF equation, Types and Applications. Working Principle of DC motors, Torque Equation, Types and Applications. Construction, Working principle and Applications of Transformer, Three phase Alternator, Synchronous motor and Three Phase Induction Motor.		
UNIT – III	ANALOG ELECTRONICS	9
Resistor, Inductor and Capacitor in Electronic Circuits- Semiconductor Materials: Silicon & Germanium – PN Junction Diodes, Zener Diode –Characteristics Applications – Bipolar Junction Transistor-Biasing, JFET, SCR, MOSFET, IGBT – Types, I-V Characteristics and Applications, Rectifier and Inverters		
UNIT – IV	DIGITAL ELECTRONICS	9
Review of number systems, binary codes, error detection and correction codes, Combinational logic - representation of logic functions-SOP and POS forms, K-map representations - minimization using K maps (Simple Problems only).		
UNIT – V	MEASUREMENTS AND INSTRUMENTATION	9
Functional elements of an instrument, Standards and calibration, Operating Principle, types -Moving Coil and Moving Iron meters, Measurement of three phase power, Energy Meter, Instrument Transformers-CT and PT, DSO- Block diagram- Data acquisition.		

	Total Contact Hours : 45
--	---------------------------------

Course Outcomes:	After completing this course, the students will be able to
CO1:	Compute the electric circuit parameters for simple problems
CO2:	Explain the working principle and applications of electrical machines
CO3:	Analyze the characteristics of analog electronic devices
CO4:	Explain the basic concepts of digital electronics
CO5:	Explain the operating principles of measuring instruments

Subject Code	Subject Name	Category	L	T	P	C
GE24201	ENGINEERING GRAPHICS	ESC	2	0	4	4

HoD/BOS Chairman

Principal

Course Objectives:
The main learning objective of this course is to prepare the students for:
Drawing engineering curves.
Drawing a freehand sketch of simple objects.
Drawing orthographic projection of solids and section of solids.
Drawing development of solids.
Drawing isometric and perspective projections of simple solids.

CONCEPTS AND CONVENTIONS (Not for Examination)

Importance of graphics in engineering applications — Use of drafting instruments — BIS conventions and specifications — Size, layout and folding of drawing sheets — Lettering and dimensioning

UNIT –I	PLANE CURVES	6+12
Basic Geometrical constructions, Curves used in engineering practices: Conics — Construction of ellipse, parabola and hyperbola by eccentricity method — Construction of cycloid — construction of involutes of square and circle — Drawing of tangents and normal to the above curves.		
UNIT – II	PROJECTION OF POINTS, LINES AND PLANES SURFACE	6+12
Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.		
UNIT-III	PROJECTION OF SOLIDS AND FREE HAND SKETCHING	6+12
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes and parallel to the other by rotating object method. Visualization concepts and Free Hand sketching: Visualization principles —Representation of Three Dimensional objects — Layout of views- Freehand sketching of multiple views from pictorial views of objects. Practicing three dimensional modeling of simple objects by CAD Software (Not for examination)		
UNIT- IV	PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES	6+12
Sectioning of above solids in simple vertical position when the cutting plane is inclined to one of the principal planes and perpendicular to the other — obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids — Prisms, pyramids cylinders and cones. Practicing three dimensional modeling of simple objects by CAD Software (Not for examination)		
UNIT – V	ISOMETRIC AND PERSPECTIVE PROJECTIONS	6+12
Principles of isometric projection — isometric scale — isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids - Prisms, pyramids and cylinders by visual ray method. Practicing three dimensional modeling of isometric projection of simple objects by CAD software (Not for examination)		
		Total Contact Hours :(L=30+P=60) 90

Course Outcomes:	On Successful completion of this course, students should be able to
CO1:	Use BIS conventions and specifications for engineering drawing.

HoD/BOS Chairman

Principal

CO2:	Construct the conic curves, involutes and cycloid
CO3:	Solve practical problems involving projection of lines
CO4:	Draw the orthographic, isometric and perspective projections of simple solids.
CO5:	Draw the development of simple solids.

2. IS 9609 (Parts 0 & 1) — 2001: Technical products Documentation — Lettering.
3. IS 10714 (Part 20) — 2001 & SP 46 — 2003: Lines for technical drawings.
4. IS 11669 — 1986 & SP 46 — 2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4) — 2001: Technical drawings — Projection Methods.

Special points applicable to University Examinations on Engineering Graphics:

There will be five questions, each of either or type covering all units of the syllabus

1. All questions will carry equal marks of 20 each making a total of 100.
2. The answer paper shall consist of drawing sheets of A3 size only.
3. The students will be permitted to use appropriate scale to fit a solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

Subject Code	Subject Name	Category	L	T	P	C
CS24201	PROGRAMMING IN C	PCC	3	0	0	3

Course Objectives:

- To understand the constructs of C Language.
- To develop C Programs using basic programming constructs
- To develop C programs using arrays and strings
- To develop modular applications in C using functions
- To develop applications in C using pointers and structures
- To do input/output and file handling in C

UNIT – I	BASICS OF C PROGRAMMING	9
Introduction to programming paradigms – Applications of C Language - Structure of C program - C programming: Data Types - Constants – Enumeration Constants - Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision making statements - Switch statement - Looping statements – Preprocessor directives - Compilation process		
UNIT – II	ARRAYS AND STRINGS	9
Introduction to Arrays: Declaration, Initialization – One dimensional array –Two dimensional arrays - String operations: length, compare, concatenate, copy – Selection sort, linear and binary search.		
UNIT – III	FUNCTIONS AND POINTERS	9
Modular programming - Function prototype, function definition, function call, Built-in functions (string functions, math functions) – Recursion, Binary Search using recursive functions –Pointers – Pointer operators – Pointer arithmetic – Arrays and pointers – Array of pointers – Parameter passing: Pass by value, Pass by reference.		
UNIT – IV	STRUCTURES AND UNION	9
Structure - Nested structures – Pointer and Structures – Array of structures – Self referential structures – Dynamic memory allocation - Singly linked list – typedef – Union - Storage classes and Visibility.		
UNIT – V	FILE PROCESSING	9
Files – Types of file processing: Sequential access, Random access – Sequential access file - Random access file - Command line arguments.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course, students should be able to:
CO1:	Demonstrate knowledge on C Programming constructs
CO2:	Develop simple applications in C using basic constructs
CO3:	Design and implement applications using arrays and strings
CO4:	Develop and implement modular applications in C using functions.
CO5:	Develop applications in C using structures and pointers.
CO6:	Design applications using sequential and random access file processing.

		Total Contact Hours :30

Subject Code	Subject Name	Category	L	T	P	C
GE24211	ENGINEERING PRACTICES LABORATORY	ESC	0	0	4	2
Course Objectives: The main learning objective of this course is to provide hands on training to the students in:						
Drawing pipeline plan; laying and connecting various pipe fittings used in common household plumbing work; Sawing; planning; making joints in wood materials used in common household wood work						
Wiring various electrical joints in common household electrical wirework.						
Welding various joints in steel plates using arc welding work; Machining various simple processes like turning, drilling, tapping in parts ;Assembling simple mechanical assembly of common household equipments; Making a tray out of metal sheet using sheet metal work						
Soldering and testing simple electronic circuits; Assembling and testing simple electronic components on PCB.						

GROUP – A (CIVIL & ELECTRICAL)

PART – I	CIVIL ENGINEERING PRACTICES	15
-----------------	------------------------------------	-----------

HoD/BOS Chairman

Principal

PLUMBING WORK:

- a) Connecting various basic pipe fittings like valves, taps, coupling, unions, reducers, elbows and other components which are commonly used in household.
- b) Preparing plumbing line sketches.
- c) Laying pipe connection to the suction side of a pump
- d) Laying pipe connection to the delivery side of a pump.
- e) Connecting pipes of different materials: Metal, plastic and flexible pipes used in household appliances.

WOOD WORK:

- a) Sawing,
- b) Planing and
- c) Making joints like T-Joint, Mortise joint and Tenon joint and Dovetail joint.

Wood Work Study:

- a) Studying joints in door panels and wooden furniture
- b) Studying common industrial trusses using models.

PART – II	ELECTRICAL ENGINEERING PRACTICES	15
------------------	---	-----------

- a) Introduction to switches, fuses, indicators and lamps - Basic switch board wiring with lamp, fan and three pin socket
- b) Staircase wiring
- c) Fluorescent Lamp wiring with introduction to CFL and LED types.
- d) Energy meter wiring and related calculations/ calibration
- e) Study of Iron Box wiring and assembly
- f) Study of Fan Regulator (Resistor type and Electronic type using Diac/Triac/quadrac)
- g) Study of emergency lamp wiring/Water heater

GROUP – B (MECHANICAL AND ELECTRONICS)

PART – III	MECHANICAL ENGINEERING PRACTICES	15
-------------------	---	-----------

WELDING WORK: a) Welding of Butt Joints, Lap Joints, and Tee Joints using arc welding. b) Practicing gas welding. BASIC MACHINING WORK: a) (simple)Turning. b) (simple)Drilling. c) (simple)Tapping. ASSEMBLY WORK: a) Assembling a centrifugal pump. b) Assembling a household mixer. c) Assembling an air-conditioner. SHEET METAL WORK: a) Making of a square tray FOUNDRY WORK: a) Demonstrating basic foundry operations.		
PART – IV	ELECTRONIC ENGINEERING PRACTICES	15
SOLDERING WORK: a) Soldering simple electronic circuits and checking continuity. ELECTRONIC ASSEMBLY AND TESTING WORK: a) Assembling and testing electronic components on a small PCB. ELECTRONIC EQUIPMENT STUDY: a) Study the elements of smart phone. b) Assembly and dismantle of LED TV. c) Assembly and dismantle of computer/ laptop		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Draw pipe line plan; lay and connect various pipe fittings used in common household plumbing work; Saw; plan; make joints in wood materials used in common household wood work.
CO2:	Wire various electrical joints in common household electrical wire work.
CO3:	Weld various joints in steel plates using arc welding work; Machine various simple processes like turning, drilling, tapping in parts; Assemble simple mechanical assembly of common household equipments; Make a tray out of metal sheet using sheet metal work.
CO4:	Solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

Subject Code	Subject Name	Category	L	T	P	C
CS24211	PROGRAMMING IN C LABORATORY	PCC	0	0	4	2
Course Objectives:						
- To familiarise with C programming constructs. - To develop programs in C using basic constructs. - To develop programs in C using arrays. - To develop applications in C using strings, pointers, functions. - To develop applications in C using structures. - To develop applications in C using file processing.						

LIST OF EXPERIMENTS:

Note: The lab instructor is expected to design problems based on the topics listed. The Examination shall not be restricted to the sample experiments designed.

1. I/O statements, operators, expressions
2. decision-making constructs: if-else, goto, switch-case, break-continue
3. Loops: for, while, do-while
4. Arrays: 1D and 2D, Multi-dimensional arrays, traversal
5. Strings: operations
6. Functions: call, return, passing parameters by (value, reference), passing arrays to function.
7. Recursion
8. Pointers: Pointers to functions, Arrays, Strings, Pointers to Pointers, Array of Pointers
9. Structures: Nested Structures, Pointers to Structures, Arrays of Structures and Unions.
10. Files: reading and writing, File pointers, file operations, random access, processor directives.

Total Contact Hours :60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Demonstrate knowledge on C programming constructs.
CO2:	Develop programs in C using basic constructs.
CO3:	Develop programs in C using arrays.
CO4:	Develop applications in C using strings, pointers, functions.
CO5:	Develop applications in C using structures.

HoD/BOS Chairman

Principal

CO6:	Develop applications in C using file processing.

Subject Code	Subject Name	Category	L	T	P	C
GE24212	COMMUNICATION LABORATORY	EEC	0	0	4	2
Course Objectives:						
To identify and apply group discussion skills to participate effectively in professional discussions.						
To analyse concepts and problems and deliver clear, concise, and effective presentations.						
To communicate proficiently through both formal and informal writing.						
To use appropriate language structures to write emails, reports, and essays.						
To give instructions and recommendations that are clear, contextually appropriate, and purposeful.						
UNIT – I						12
Speaking-Role Play Exercises Based on Workplace Contexts, - talking about competition- discussing						

HoD/BOS Chairman
Principal

progress toward goals-talking about experiences- talking about events in life- discussing past events- Writing: writing emails (formal& semi-formal).	
UNIT – II	12
Speaking: discussing news stories-talking about frequency-talking about travel problems- discussing travel procedures- talking about travel problems- making arrangements-describing arrangements- discussing plans and decisions- discussing purposes and reasons- understanding common technology terms-Writing: - writing different types of emails.	
UNIT – III	12
Speaking: discussing predictions-describing the climate-discussing forecasts and scenarios- talking about purchasing-discussing advantages and disadvantages- making comparisons- discussing likes and dislikes- discussing feelings about experiences-discussing imaginary scenarios Writing: short essays and reports-formal/semi-formal letters.	
UNIT – IV	12
Speaking: discussing the natural environment-describing systems-describing position and movement-explaining rules-(example- discussing rental arrangements)- understanding technical instructions-Writing: writing instructions-writing a short article.	
UNIT – V	12
Speaking: describing things relatively-describing clothing-discussing safety issues (making recommendations) talking about electrical devices-describing controlling actions- Writing: job application(Cover letter + Curriculum vitae)-writing recommendations.	
Total Contact Hours :60	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Speak effectively in group discussions held in a formal/semi formal contexts.
CO2:	Discuss, analyse and present concepts and problems from various perspectives to arrive at suitable solutions
CO3:	Write emails, letters and effective job applications.
CO4:	Write critical reports to convey data and information with clarity and precision
CO5:	Give appropriate instructions and recommendations for safe execution of tasks

SEMESTER -III

Subject Code	Subject Name	Category	L	T	P	C
MA24301	DISCRETE MATHEMATICS	BSC	3	1	0	4
Course Objectives:						
To extend student's logical and mathematical maturity and ability to deal with abstraction						
To introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems						
To understand the basic concepts of combinatorics and graph theory.						
To familiarize the applications of algebraic structures.						
To understand the concepts and significance of lattices and boolean algebra which are widely used in computer science and engineering						

UNIT – I	LOGIC AND PROOFS	9+3
Propositional logic – Propositional equivalences – Predicates – Rules of inference - Introduction to proofs – Proof methods and strategy		
UNIT – II	COMBINATORICS	9+3
Mathematical induction – Strong induction and well ordering – The basics of counting – The pigeonhole principle – Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Inclusion and exclusion principle and its applications.		
UNIT – III	GRAPHS	9+3
Graphs and graph models – Graph terminology and special types of graphs – Matrix representation of graphs and graph isomorphism – Connectivity – Euler and Hamilton paths		
UNIT – IV	ALGEBRAIC STRUCTURES	9+3
Algebraic systems – Semi groups and monoids - Groups – Subgroups – Homomorphism's – Normal subgroup and cosets – Lagrange's theorem		
UNIT – V	LATTICES AND BOOLEAN ALGEBRA	9+3
Partial ordering – Posets – Lattices as posets – Properties of lattices - Lattices as algebraic systems – Sub lattices – Direct product and homomorphism – Some special lattices – Boolean algebra		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Have knowledge of the concepts needed to test the logic of a program
CO2:	Have an understanding in identifying structures on many levels.
CO3:	Be aware of a class of functions which transform a finite set into another finite set which relates to input and output functions in computer science
CO4:	Be aware of the counting principles
CO5:	Be exposed to concepts and properties of algebraic structures such as groups, rings and fields.

Subject Code	Subject Name	Category	L	T	P	C
CS24305	DIGITAL PRINCIPLES AND COMPUTER ORGANIZATION	ESC	3	0	0	3

Course Objectives:						
To analyze and design combinational circuits.						
To analyze and design sequential circuits.						
To understand the basic structure and operation of a digital computer.						
To study the design of path unit, control unit for processor and to familiarize with the hazards.						
To understand the concepts of various memories and I/O interfacing.						

UNIT – I	COMBINATIONAL LOGIC	9
Combinational Circuits – Karnaugh Map - Analysis and Design Procedures – Binary Adder – Subtractor – Decimal Adder - Magnitude Comparator – Decoder – Encoder – Multiplexers - Demultiplexers		
UNIT – II	SYNCHRONOUS SEQUENTIAL LOGIC	9
Introduction to Sequential Circuits – Flip-Flops – operation and excitation tables, Triggering of FF, Analysis and design of clocked sequential circuits – Design – Moore/Mealy models, state minimization, state assignment, circuit implementation - Registers – Counters		
UNIT – III	COMPUTER FUNDAMENTALS	9
Functional Units of a Digital Computer: Von Neumann Architecture – Operation and Operands of Computer Hardware Instruction – Instruction Set Architecture (ISA): Memory Location, Address and Operation – Instruction and Instruction Sequencing – Addressing Modes, Encoding of Machine Instruction – Interaction between Assembly and High Level Language		
UNIT – IV	PROCESSOR	9
Instruction Execution – Building a Data Path – Designing a Control Unit – Hardwired Control, Microprogrammed Control – Pipelining – Data Hazard – Control Hazards		
UNIT – V	MEMORY AND I/O	9
Memory Concepts and Hierarchy – Memory Management – Cache Memories: Mapping and Replacement Techniques – Virtual Memory – DMA – I/O – Accessing I/O: Parallel and Serial Interface – Interrupt I/O – Interconnection Standards: USB, SATA		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Design various combinational digital circuits using logic gates.
CO2:	Design sequential circuits and analyze the design procedures.
CO3:	State the fundamentals of computer systems and analyze the execution of an instruction.
CO4:	Analyze different types of control design and identify hazards.
CO5:	Identify the characteristics of various memory systems and I/O communication .

Subject Code	Subject Name	Category	L	T	P	C
CS24304	OBJECT ORIENTED PROGRAMMING	PCC	2	0	2	3
Course Objectives:						
To Understand Object Oriented Programming concepts and basics of java programming language.						
To know the principles of inheritance and interfaces.						
To develop a java application with packages, threads and exceptions.						
To define and use I/O streams and networking.						
To design and build Graphical User Interface Application using JAVA FX.						

UNIT – I	INTRODUCTION TO OOP AND JAVA	6
Overview of OOP – Object oriented programming paradigms – Features of Object-Oriented Programming – Overview of Java – Data Types, Variables and Arrays – Operators – Control Statements – Programming Structures in Java– Defining classes in Java–Constructors-Methods-Access specifiers-Static members		
UNIT – II	INHERITANCE AND INTERFACES	6
Overloading Methods – Inheritance: Basics– Types of Inheritance - Super keyword- Method Overriding – Abstract Classes – final with Inheritance. Interfaces Strings: Basic String class and methods		
UNIT – III	PACKAGES, EXCEPTION HANDLING AND MULTITHREADING	8
Packages and Member Access – Importing Packages. Exception handling basics – Multiple catch Clauses – Nested try Statements – Java’s Built-in Exceptions – User defined Exception - Multithreaded Programming: Java Thread Model–Creating a Thread and Multiple Threads – Priorities – Synchronization – Suspending –Resuming, and Stopping Threads		
UNIT – IV	I/O, NETWORKING	5
I/O Basics – Reading and Writing Console I/O – Reading and Writing Files. Java Networking: Basics of networking in Java - Sockets and server sockets		
UNIT – V	JAVAFX EVENT HANDLING, CONTROLS	5
JAVAFX Events and Controls: Event Basics – Handling Key and Mouse Events. Controls: Checkbox – Radio Buttons – ListView – Combo Box – Text Controls. Layouts – FlowPane – HBox and VBox – Border Pane – Stack Pane – GridPane. Menus Basics – Menu bars – Menu Item.		
		Total Contact Hours :30

HoD/BOS Chairman

Principal

LIST OF EXERCISES	
1.	Solve problems by using sequential search, binary search, and quadratic sorting algorithms (selection, insertion)
2.	Develop stack and queue data structures using classes and objects.
3.	Develop a java application with an Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club funds. Generate pay slips for the employees with their gross and net salary.
4.	Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea() that prints the area of the given shape.
5.	Solve the above problem using an interface.
6.	Implement exception handling and creation of user defined exceptions.
7.	Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, the second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of the cube of the number.
8.	Write a program to perform file operations.
9.	Develop applications to demonstrate the features of generics classes.
10.	Simple chatting using Socket and ServerSocket
11.	Develop applications using JavaFX controls, layouts and menus
12.	Develop a mini project for any application using Java concepts.
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Apply the concepts of classes and objects to solve simple problems.
CO2:	Develop programs using inheritance, packages and interfaces.
CO3:	Make use of exception handling mechanisms and multithreaded model to solve real world problems.
CO4:	Build Java applications with I/O packages, string classes, Collections and generics concepts & Networking.
CO5:	Integrate the concepts of event handling and JavaFX components and controls for developing GUI based applications.

Subject Code	Subject Name	Category	L	T	P	C
AD24301	ARTIFICIAL INTELLIGENCE	PCC	3	0	0	3
Course Objectives:						
To learn the basic AI approaches.						
To develop problem solving agents.						
To explore strategic decision-making through game theory and CSP techniques.						
To implement logical reasoning and inferences						
To develop solutions using probabilistic approaches to handle uncertainty.						

UNIT – I	INTRODUCTION TO INTELLIGENT SYSTEMS	9
Introduction to AI-Agents and Environments-nature of environments-structure of agents. Problem solving agents-search algorithms-uninformed search strategies.		
UNIT – II	HEURISTIC AND LOCAL SEARCH IN AI	9
Heuristic search strategies – heuristic functions. Local search and optimization problems – local search in continuous space –search with non-deterministic actions– search in partially observable environments – online search agents and unknown environments		
UNIT – III	GAME PLAYING AND CSP	9
Game theory – optimal decisions in games – alpha-beta search – Monte-carlo tree search – stochastic games – partially observable games. Constraint satisfaction problems – constraint propagation – backtracking search for CSP – local search for CSP – structure of CSP		
UNIT – IV	LOGICAL REASONING	9
Knowledge-based agents–propositional logic–propositional theorem proving–propositional model checking – agents based on propositional logic. First-order logic – syntax and semantics – knowledge representation and engineering – inferences in first-order logic – forward chaining – backward chaining – resolution.		
UNIT – V	PROBABILISTIC REASONING	9
Acting under uncertainty–Bayesian inference–naïve Bayes models-Probabilistic reasoning– Bayesian networks–exact inference in BN–approximate inference in BN–causal networks.		
		Total Contact Hours : 45

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Explain intelligent agent frameworks
CO2:	Apply problem solving techniques
CO3:	Apply game playing and CSP techniques
CO4:	Perform logical reasoning
CO5:	Perform probabilistic reasoning under uncertainty

Subject Code	Subject Name	Category	L	T	P	C
AD24302	DATA VISUALIZATION	PCC	2	0	2	3
Course Objectives:						
- To give overview of descriptive and inferential statistics. - To provide basics of R and Python. - To manipulate and visualize data using R, python and Watson Studio. - To focus on plots using Matplotlib and seaborn. - To analyze data using various visualization tools. - To create maps in python using folium.						

UNIT – I	INTRODUCTION TO STATISTICS	6
Data collection methods – Descriptive Statistics: Mean, Median, Mode – Inferential Statistics: Random Variables, Probability Distribution		
UNIT – II	VISUALIZATION USING R	6

HoD/BOS Chairman

Principal

Descriptive data analysis using R – Data manipulation with R (dplyr, data. table, reshape2 package, tidyr package, Lubridate package) - Data Visualization with R (working with ggplot2)		
UNIT – III	WATSON STUDIO	6
Adding data to data refinery – Preprocessing & Visualization of data in Watson Studio.		
UNIT – IV	DATA ANALYSIS USING PYTHON	6
Basics of Python , Numpy Library – Arrays creation , Indexing , Slicing , Aggregation , Reshaping, Pandas Library – Series , DataFrame , using csv & excel files , Data cleaning & manipulation , Merging & Joining.		
UNIT – V	VISUALIZATION USING PYTHON	6
Data Visualization tools in python – Basic plots using Matplotlib - Advanced Visualization tools using Matplotlib – Sea born functionalities – Spatial visualization and analysis in python in folium		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Do the data manipulation operations for iris and mtcars dataset using dplyr package and obtain the results for following functions: i. filter ii. select iii. arrange iv. summarise v. mutate
2. Create a data frame and do the following operations using tidyr package i. gather ii. spread iii. separate iv. unite
3. Do the following operations for any external dataset using data. table package i. Select a subset row ii. Select a column with particular values iii. Select columns with multiple values iv. Select a column to return a vector v. Select multiple columns vi. Returns the sum and standard deviation vii. Sum of selected columns
4. Do the following visualizations for any external csv file i. Line graph ii. Bar graph iii. Histogram iv. Scatter plot v. Pie chart

5. Do the following Data analysis for your own Data set using pandas package.
i. Make the first column as index ii. Select single column and print the data iii. Select multiple columns and print the data iv. Select single column and print the last five elements of the data. v. Select multiple rows and print the first five elements of the data vi. Select multiple rows and columns from the data set and print it. vii. Select all the rows and some columns (more than two) from the data set and print it. viii. Print the same data set again and delete the first column from the data set and print it. ix. Change the 1st, 2nd and 3rd columns name and print it
6. Consider any csv file and do the following visualization using matplotlib lib package
i. Line graph /with style ii. Bar Graph iii. Histogram iv. Scatter plot v. Pie chart
7. Merge the two data sets (any two csv files) and perform the following join
i. operations ii. Natural join iii. Full outer join iv. Left outer join v. Right outer join
8.Do the EDA process for loan prediction data set
9.Data analytics and visualization using IBM Watson studio
10.Do the following operations for your own data using pandas
i. Descriptive data analytics using pandas ii. Print the data based on particular year, particular month and particular data iii. Filter the data based on conditions (any conditions) iv. Select any two columns and do the pandas sort operations (ascending and descending)
Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Differentiate descriptive and inferential statistics.
CO2:	Use R to do statistics and to visualize data.
CO3:	Visualize analyzed data using IBM Watson Studio.
CO4:	Familiar with python scripts used for visualization.
CO5:	Use advance visualization tool and sea born functionalities.

Textbooks:	
1.	IBM -CE Data Visualization Using R, Python and Watson studio

HoD/BOS Chairman

Subject Code	Subject Name	Category	L	T	P	C
IT24301	DATA STRUCTURES AND ALGORITHMS	PCC	3	0	0	3

Course Objectives:
- To understand the concepts of ADTs. - To design and implement linear data structures. - To develop and analyze efficient sorting ,searching and hashing algorithms. - To apply and evaluate tree data structures. - To explore graph data structures and algorithms.

UNIT – I	ABSTRACT DATA TYPES	9
Abstract Data Types (ADTs) – ADTs and classes – Basics of OOPS concepts – inheritance – namespaces – Introduction to analysis of algorithms – asymptotic notations – recursion – analyzing recursive algorithms.		
UNIT – II	LINEAR STRUCTURES	9
List ADT – array-based implementations – linked list implementations – singly linked lists–doubly linked lists – circularly linked lists – Stack ADT – Queue ADT – double ended queues – applications.		
UNIT – III	SORTING AND SEARCHING TECHNIQUES	9
Bubble sort – selection sort – insertion sort – merge sort – quick sort – analysis of sorting algorithms – linear search – binary search –hashing –hash functions -collision handling strategies– rehashing.		
UNIT – IV	TREE STRUCTURES	9
Tree ADT-Binary Tree ADT-tree traversals-binary search trees-AVL trees-heaps- B trees- B+trees.		
UNIT – V	GRAPH STRUCTURES	9
Graph ADT-representation of graph-graph traversals-DAG-topological ordering-greedy algorithms-dynamic programming-shortest paths-minimum spanning trees:Prims-Kruskal algorithm.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Explain Abstract Data Types (ADTs) and their role in algorithm design.
CO2:	Design, implement, and analyze linear data structures, such as lists, queues, and stacks, according to the needs of different applications.
CO3:	Apply and evaluate sorting and searching techniques, including hashing and collision resolution strategies
CO4:	Design, implement, and analyze efficient tree structures to meet requirements such as searching, indexing, and sorting.
CO5:	Model problems as graph problems and implement efficient graph algorithms to solve them.

LIST OF EXPERIMENTS	
1.Implementation of a Model-Based Agent	
2.Implementation of Greedy Best-First Search Algorithm	
3.Implementation of Hill Climbing Algorithm for Local Search	
4.Implementation of Memory Bounded A* Algorithm	
5. Implementation of Alpha Beta Tree search.	
6.Solving 8-Queens Problem using Backtracking	
7.Implementation of Tic-Tac-Toe AI using Mini-max Algorithm	
8.Implementation of Forward and Backward Chaining in AI	
9.Implementation of First-Order Logic (FOL) Inference System	
10.Implementation of Probabilistic Reasoning using Bayesian Networks	
Total Contact Hours : 45	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand and build a agent to solve simple problems
CO2:	Design and implement search strategies
CO3:	Implement game-playing strategies and constraint satisfaction techniques for AI-based decision-making.
CO4:	Develop and apply logical reasoning methods for knowledge inference in AI systems.
CO5:	Implement probabilistic reasoning techniques to handle uncertainty in AI applications.

SEMESTER-IV

Subject Code:	Subject Name	Category	L	T	P	C
MA24401	PROBABILITY AND STATISTICS	BSC	3	1	0	4
Course objectives:						
- To introduce the basic concepts of probability and random variables. - To introduce the basic concepts of Special distribution. - To introduce the basic concepts of two dimensional random variables. - To acquaint the knowledge of non parametric test. - To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.						
UNIT – I	PROBABILITY AND RANDOM VARIABLES					9+3
Axioms of probability - Conditional Probability - Baye’s Theorem – One dimensional Discrete and Continous Random variables - Moments – Moment generating functions						
UNIT – II	SPECIAL DISTRIBUTIONS					9+3
Discrete distributions : Binomial, Poisson, Geometric – Continuous distributions: Uniform, Exponential and Normal distribution.						
UNIT – III	TWO DIMENSIONAL RANDOM VARIABLES					9+3
Two dimensional random variables: Joint distribution - Marginal and Conditional distributions - Covariance – Correlation co-efficients – Regression lines.						
UNIT – IV	NON PARAMETRIC TESTS					9+3
Introduction - The sign test - The Signal - Rank test - Rank sum tests - The U-test - The H-test - Tests based on Runs - Test of randomness - The Kolmogorov Tests.						

HoD/BOS Chairman

Principal

UNIT – V	STATISTICAL QUALITY CONTROL	9+3
Control charts for measurements(X and R charts) - Control charts for attributes (p,c,np charts) - Tolreance Limits - Acceptance Sampling.		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the basic concepts of Probabilities and Random variables and apply in Engineering applications.
CO2:	Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
CO3:	Apply the concept of Two dimensional random variable in Engineering Disciplines
CO4:	Use the concept of non parametric testing for Non-Normal population.
CO5:	Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control

Subject Code	Subject Name	Category	L	T	P	C
CS24403	FOUNDATION OF DATA SCIENCE	PCC	3	0	0	3
Course Objectives:						
To understand the data science fundamentals and process.						
To learn to describe the data for the data science process						
To learn to describe the relationship between data.						
To utilize the Python libraries for Data Wrangling.						
To present and interpret data using visualization libraries in Python						

UNIT – I	INTRODUCTION	9
Introduction to Data Science and Uses – facets of data – Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation Exploratory Data analysis – build the model– presenting findings and building applications.		
UNIT – II	DESCRIBING DATA	9
Basic Statistical descriptions of Data -Types of Data – Types of Variables -Describing Data with Tables and Graphs –Describing Data with Averages – Describing Variability – Normal Distributions and Standard (z) Scores.		
UNIT – III	DESCRIBING RELATIONSHIPS	9
Correlation -Scatter plots – correlation coefficient for quantitative data –computational formula for correlation coefficient – Regression –regression line –least squares regression line – Standard error of estimate – interpretation of r ² –multiple regression equations – regression towards the mean.		

HoD/BOS Chairman

Principal

UNIT – IV	PYTHON LIBRARIES FOR DATA WRANGLING	9
Basics of Numpy arrays –aggregations –computations on arrays –comparisons, masks, boolean logic – fancy indexing – structured arrays – Data manipulation with Pandas – data indexing and selection – operating on data – missing data – Hierarchical indexing – combining datasets – aggregation and grouping – pivot tables.		
UNIT – V	DATA VISUALIZATION	9
Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three dimensional plotting – Geographic Data with Basemap – Visualization with Seaborn.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Apply the data science process.
CO2:	Understand different types of data description for datascience process
CO3:	Gain knowledge on relationships between data.
CO4:	Use the Python Libraries for DataWrangling.
CO5:	Apply visualization Libraries in Python to interpret and explore data.

Subject Code	Subject Name	Category	L	T	P	C
AD24402	FUNDAMENTALS OF OPERATING SYSTEMS	PCC	3	0	0	3
Course Objectives:						
To understand the basics and functions of operating systems						
To understand the processes and analyze the CPU scheduling algorithms						
To understand the concepts of deadlock and process synchronization						
To be familiar with I/O management and File systems.						
To be familiar with the basics of virtual machines and analyze various memory management schemes.						
UNIT – I	Operating System					9
Operating System-Introduction, Operating system services Structures-Simple Batch, Multi-programmed, Time-shared, Personal Computer, Parallel, Distributed Systems, Real-Time Systems, System components, and Operating System services-System Call.						
UNIT – II	Process and CPU Scheduling					9
Processes – Process Concept – Process Scheduling – Operations on Processes – Inter-process Communication- Threads-Scheduling Criteria-Scheduling Algorithms-Multiple – Processor Scheduling.						
UNIT – III	Deadlocks and process synchronization					9
Deadlocks - System Model- Deadlocks Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection and Recovery from Deadlock. The Critical Section Problem, Synchronization Hardware, Semaphores, and Classical Problems of Synchronization, Critical Regions, Monitors.						
UNIT – IV	Disk Management and file system operations.					9
Disk Scheduling Algorithms-FCFS,SSTF, SCAN,C-SCAN File System Interface and Operations -Access methods, Directory Structure, Protection, File System Structure, Allocation methods, kernel support for files.						
UNIT – V	Memory Management and Virtual Machines					9
Logical versus Physical Address Space, Swapping, Contiguous Allocation, Paging, Segmentation, Demand Paging, Page Replacement, Page Replacement Algorithms-Types of virtual machines and their implementations						
		Total Contact Hours : 45				

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Explain the fundamental concepts of operating systems
CO2:	Analyze the various CPU scheduling algorithms
CO3:	Explain deadlock prevention,avoidance algorithms and process synchronization
CO4:	Explain the functionality of file systems I/O systems
CO5:	Compare and contrast various memory management schemes

Subject Code	Subject Name	Category	L	T	P	C
AD24403	DATABASE DESIGN AND MANAGEMENT	PCC	3	0	0	3

Course Objectives:						
- To introduce database development lifecycle and conceptual modeling - To learn SQL for data definition ,manipulation and querying a database - To learn relational database design using conceptual mapping and Normalization - To learn transaction concepts and serializability of schedules - To learn data model and querying in object-relational and No-SQL databases						

UNIT – I	CONCEPTUAL DATA MODELING	8
Database environment–Database system development life cycle–Requirements collection–Database design--Entity-Relationship model–Enhanced-ER model–UML class diagrams		
UNIT – II	RELATIONAL MODEL AND SQL	10
Relational model concepts—Integrity constraints : Domain, Key, Referential, Check, Implementation of Constraints in SQL—SQL Data manipulation : Inserting, Modifying, Deleting, Querying, Joins–SQL Data definition : Creating and Managing Databases, Defining Tables and Data Types, Implementing Constraints, Indexing for Performance Optimization–Views—SQL programming.		

HoD/BOS Chairman

Principal

UNIT – III	RELATIONAL DATABASE DESIGN AND NORMALIZATION	10
ER and EER-to-Relational mapping – Update anomalies – Functional dependencies – Inference rules – Minimal cover – Properties of relational decomposition – Normalization (upto BCNF).		
UNIT – IV	TRANSACTION MANAGEMENT	8
Transaction concepts – properties – Schedules – Serializability – Concurrency Control – Two-phase locking techniques. Programmatic SQL: Embedded SQL, Dynamic SQL, Advanced SQL- Programming in MYSQL.		
UNIT – V	OBJECT RELATIONAL AND NO-SQL DATABASES	9
Mapping EER to ODB schema – Object identifier – referencetypes – rowtypes – UDTs – Subtypes and supertypes – user-defined routines – Collectiontypes – Object Query Language; No-SQL: CAP theorem – Document-based: MongoDB data model and CRUD operations; Column-based: Hbase data model and CRUD operations		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the database development life cycle and apply conceptual modeling
CO2:	Apply SQL and programming in SQL to create, manipulate and query the database
CO3:	Apply the conceptual-to relational mapping and normalization to design relational database
CO4:	Determine the serializability of any non-serial schedule using concurrency techniques
CO5:	Apply the data model and querying in Object-relational and No-SQL databases.

Subject Code	Subject Name	Category	L	T	P	C
AM24404	MACHINE LEARNING	PCC	2	0	2	3
Course Objectives:						
Understand the necessity of machine learning for addressing diverse problem-solving scenarios.						
Study various machine learning algorithms, including supervised, semi-supervised, and unsupervised learning techniques						
Explore emerging approaches and advancements in machine learning.						
Leverage Watson Studio for a collaborative environment equipped with tools to address business challenges effectively						
Utilize tools in Watson Studio to analyze and visualize data, cleanse and prepare data, ingest streaming data, and develop and train machine learning models						

UNIT – I	INTRODUCTION TO MACHINE LEARNING	6
Machine learning Introduction-Types of Machine learning -Supervised, Unsupervised, and reinforcement-Over fitting and Regression-Classification-Clustering-Examples		
UNIT – II	INTRODUCTION TO IBM CLOUD	6

HoD/BOS Chairman

Principal

Introduction to IBM Cloud- Resources-IBM Cloud Infrastructure- Security-IBM Cloud Foundry-Cloud Park for data- IBM Cloud vs Amazon Cloud - Cloud Native Storage and Data Service		
UNIT – III	INTRODUCTION TO WASTON STUDIO	6
Introduction to Watson Studio- Project creation- Storage- Access control-Prebuilt Watson application- Watson Solutions- Catalog and govern data		
UNIT – IV	MACHINE LEARNING IN WATSON	6
Watson Knowledge Studio and Watson Knowledge catalog-Watson Discovery Services-Watson Auto AI-Watson Open Scale- Watson API		
UNIT – V	NATURAL LANGUAGE PROCESSING	6
NLP Introduction-Natural Language Understanding (NLU)-Conversational AI-Building blocks of chat bot-Watson Assistant-Speech to Text -Text to speech.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Implement a Linear Regression model to predict house prices using a dataset.
2. Train a K-Nearest Neighbors (KNN) classifier on the Iris dataset and evaluate its accuracy
3. Perform sentiment analysis on a given text using IBM Watson Natural Language Understanding (NLU).
4. Deploy a Flask web application on IBM Cloud Foundry.
5. Apply K-Means clustering to segment customers based on their purchasing behavior.
6. Convert an audio file to text using IBM Watson Speech-to-Text API.
7. Build a basic Chabot using IBM Watson Assistant and integrate it into a Python application
8. Train a Convolutional Neural Network (CNN) to classify images from the MNIST dataset.
9. Implement Logistic Regression for spam email detection using a text dataset.
10. Use IBM Watson Natural Language Understanding (NLU) to extract named entities from a given text.
Total Contact Hours : 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Analyze various methods and theories in the filed of ML
CO2:	Gain an understanding of the fundamental principles and techniques of ML
CO3:	Utilize Watson Studio to streamline the process from experimentation to deployment, enhance data exploration and accelerate model development and training
CO4:	Demonstrate the creation and application of AI models.
CO5:	Analyse and evaluate the performance of the AI models

Subject Code	Subject Name	Category	L	T	P	C
GE24901	ENVIRONMENTAL SCIENCES AND SUSTAINABILITY	BSC	2	0	0	2
Course Objectives:						
To study the interrelationship between living organism and environment.						
To finding and implementing scientific, technological, economic and political solutions to environmental problems.						
To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.						
To study the dynamic processes and understand the features of the earth’s interior and surface.						
To study the integrated themes and biodiversity, natural resources, pollution control and waste management.						

UNIT – I	ENVIRONMENT AND BIODIVERSITY	6
Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.		
UNIT – II	ENVIRONMENTAL POLLUTION	6
Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollutions. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHSAS). Environmental protection, Environmental protection acts.		
UNIT – III	NATURAL RESOURCES	6
Forest resources: Use and over-exploitation, deforestation, case studies. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. New Renewable Energy Sources: Hydrogen energy, Solar energy, wind energy, Tidal energy, Ocean thermal energy and Geothermal energy. Role of an individual in conservation of natural resources.		
UNIT – IV	SUSTAINABILITY PRACTICES	6

HoD/BOS Chairman

Principal

Zero waste and R concept, Circular economy, Material Life cycle assessment, Environmental Impact Assessment, ISO 14000 Series, Green buildings. Water conservation, rain water harvesting. Issues and possible solutions – climate change, global warming. Concept of Carbon Credit and Carbon Footprint. Development and GDP.Environmental management in industry-A, case study.		
UNIT – V	SOCIAL ISSUES AND POPULATION	6
Population growth, variation among nations – population explosion – family welfare programme – environment and human health–human rights–value education–HIV/AIDS–women and child welfare – role of information technology in environment and human health – Case studies. Urban problems related to energy.		
		Total Contact Hours : 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	To recognize and understand the functions of environment, ecosystems and biodiversity and their conservation.
CO2:	To identify causes effects of environmental pollution and natural disasters and contribute to the preventive measures in the society.
CO3:	To apply knowledge on the conservation of natural resources by keeping the sustainable development as a main goal.
CO4:	To identify the importance of Development as a standard of living otherwise that leads to serious environmental disasters.
CO5:	To demonstrate the knowledge about human population and its drastic change which will eventually lead to unsustainable development.

Subject Code	Subject Name	Category	L	T	P	C
AD24413	DATABASE DESIGN AND MANAGEMENT LABORATORY	PCC	0	0	3	1.5
- To understand the database development life cycle - To learn database design using conceptual modeling, Normalization - To implement database using Data definition, Querying using SQL manipulation and SQL programming - To implement database applications using IDE/RAD tools - To learn querying Object-relational databases						
LIST OF EXPERIMENTS						
1. Database Development Life cycle: Problem definition and Requirement analysis Scope and Constraints						
2. Database design using Conceptual modeling (ER-EER) – top-down approach Mapping conceptual to relational database and validate using Normalization						
3. Implement the database using SQL Data definition with constraints, Views						
4. Query the database using SQL Manipulation						
5. Querying/Managing the database using SQL Programming - Stored Procedures/Functions – Constraints and security using Triggers						
6. Database design using Normalization – bottom-up approach						
7. Develop database applications using IDE/RAD tools (Eg., NetBeans, VisualStudio)						
8. Database design using EER-to-ODB mapping / UML class diagrams						
9. Object features of SQL-UDTs and sub-types, Tables using UDTs, Inheritance, Method definition						
10. Querying the Object-relational database using Object Query language						
						Total Contact Hours:45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the database development life cycle
CO2:	Design relational database using conceptual-to-relational mapping, Normalization
CO3:	Apply SQL for creation, manipulation and retrieval of data
CO4:	Develop a database applications for real-time problems
CO5:	Design and query object-relational databases

- To understand the python libraries for data science - To understand the basic Statistical and Probability measures for data science. - To learn descriptive analytics on the benchmark data sets. - To apply correlation and regression analytics on standard data sets. - To present and interpret data using visualization packages in Python.						

LIST OF EXPERIMENTS	
1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages.	
2. Working with Numpy arrays	
3. Working with Pandas data frames	
4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.	
5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following: a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis. b. Bivariate analysis: Linear and logistic regression modeling c. Multiple Regression analysis d. Also compare the results of the above analysis for the two data sets.	
6. Apply and explore various plotting functions on UCI data sets. a. Normal curves b. Density and contour plots c. Correlation and scatter plots d. Histograms e. Three dimensional plotting	
7. Visualizing Geographic Data with Basemap	
	Total Contact Hours :45

SEMESTER V

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
AM24501	DEEP LEARNING FOR VISION	PCC	3	0	0	3
Course Objectives:						
To introduce basic computer vision concepts.						
To understand the methods and terminologies involved in deep neural network.						
To impart knowledge on CNN						
To introduce RNN and Deep Generative model						
To solve real world computer vision applications using Deep learning						

UNIT – I	COMPUTER VISION BASICS	9
Introduction to Image Formation, Capture and Representation; Linear Filtering, Correlation, Convolution. Visual Features and Representations: Edge, Blobs, Corner Detection; Visual Features extraction: Bag-of-words, VLAD; RANSAC, Hough transform.		
UNIT – II	INTRODUCTION TO DEEP LEARNING	9
Deep Feed-Forward Neural Networks – Gradient Descent – Back-Propagation and Other Differentiation Algorithms – Vanishing Gradient Problem – Mitigation – Rectified Linear Unit (ReLU) – Heuristics for Avoiding Bad Local Minima – Heuristics for Faster Training – Nestors Accelerated Gradient Descent – Regularization for Deep Learning – Dropout – Adversarial Training – Optimization for Training Deep Models.		
UNIT – III	VISUALIZATION AND UNDERSTANDING CNN	9
Convolutional Neural Networks (CNNs): Introduction to CNNs; Evolution of CNN Architectures: AlexNet, ZFNet, VGG. Visualization of Kernels; Backprop-to-image/ Deconvolution Methods; Deep Dream, Hallucination, Neural Style Transfer; CAM, Grad-CAM.		
UNIT – IV	CNN and RNN FOR IMAGE AND VIDEO PROCESSING	9
CNNs for Recognition, Verification, Detection, Segmentation: CNNs for Recognition and Verification (Siamese Networks, Triplet Loss, Contrastive Loss, Ranking Loss); CNNs for Detection: Background of Object Detection, R-CNN, Fast R-CNN. CNNs for Segmentation: FCN, SegNet. Recurrent Neural Networks (RNNs): Review of RNNs; CNN + RNN Models for Video Understanding: Spatio-temporal Models, Action/Activity Recognition		
UNIT – V	DEEP GENERATIVE MODELS	9
Deep Generative Models: Review of (Popular) Deep Generative Models: GANs, VAEs Variants and Applications of Generative Models in Vision: Applications: Image Editing, Inpainting, Superresolution, 3D Object Generation, Security; Recent Trends: Self-supervised Learning; Reinforcement Learning in Vision.		
		Total Contact Hours : 45
Course Outcomes:	Upon successful completion of this course, students will be able to:	

HoD/BOS Chairman

Principal

CO1:	Implement basic Image processing operations.
CO2:	Understand the basic concept of deep learning.
CO3:	Design and implement CNN and RNN and Deep generative model
CO4:	Understand the role of deep learning in computer vision applications.
CO5:	Design and implement Deep generative model.

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
CS24501	THEORY OF COMPUTATION	PCC	3	0	0	3
Course Objectives:						
To understand foundations of computation including automata theory.						
To construct models of regular expressions and languages						
To design context free grammar for context free languages and normalize it.						
To understand Turing machines and their capability.						
To understand Undecidability and NP class problems.						

UNIT – I	AUTOMATA	9
Introduction- Basic Mathematical Notation and techniques- Finite Automata – Deterministic Finite Automata – Non-deterministic Finite Automata – Finite Automata with Epsilon Transitions		
UNIT – II	REGULAR EXPRESSIONS AND LANGUAGES	9
Regular Expressions – Finite Automata and Regular Expressions – Proving Languages not to be regular – Closure Properties of Regular Languages - Equivalence and Minimization of Automata.		
UNIT – III	CONTEXT FREE GRAMMAR	9
Types of Grammar – Context Free Grammars - Parse Trees – Ambiguity - Simplification of CFG - Greibach Normal form – Chomsky normal form - pumping lemma for Context Free Language - Problems related to Chomsky Normal Form and Greibach Normal Form.		
UNIT – IV	PUSHDOWN AUTOMATA AND TURING MACHINES	9
Pushdown Automata - Deterministic and Non-Deterministic Pushdown Automata -Equivalence of Pushdown Automata and CFG - Turing Machines – Programming Techniques for TM.		
UNIT – V	UNDECIDABILITY	9
Decidable and Undecidable language - Non Recursive Enumerable (RE) Language – Undecidable Problem with Recursively Enumerable –Properties- Undecidable Problems about Turing Machine – Post's Correspondence Problem, The Class P and NP- Kruskal's algorithm – Travelling Salesman Problem- 3-CNF SAT problems.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Construct automata For any regular languages.
CO2:	Write regular expressions for any pattern.
CO3:	Design context free grammar and Simplify it.
CO4:	Design Pushdown Automata & Turing machine for computational functions.
CO5:	Classify problems that are solvable by computers and some problems are Undecidable.

CS24503	EMBEDDED SYSTEMS AND IOT	ESC	3	0	0	3
Course Objectives:						
To learn the internal architecture and programming of an embedded processor.						
To introduce interfacing I/O devices to the processor.						
To introduce the evolution of the Internet of Things (IoT).						
To build a small low-cost embedded and IoT system using Arduino/Raspberry Pi/ open platform.						
To apply the concept of Internet of Things in real world scenario.						

UNIT – I	8-BIT EMBEDDED PROCESSOR	9
8-Bit Microcontroller – Architecture – Instruction Set and Programming – Programming Parallel Ports – Timers and Serial Port – Interrupt Handling.		
UNIT – II	EMBEDDED C PROGRAMMING	9
Memory And I/O Devices Interfacing – Programming Embedded Systems in C – Need For RTOS – Multiple Tasks and Processes – Context Switching – Priority Based Scheduling Policies.		
UNIT – III	IOT AND ARDUINO PROGRAMMING	9

HoD/BOS Chairman

Principal

Introduction to the Concept of IoT Devices – IoT Devices Versus Computers – IoT Configurations – Basic Components – Introduction to Arduino – Types of Arduino – Arduino Toolchain – Arduino Programming Structure – Sketches – Pins – Input/Output From Pins Using Sketches – Introduction to Arduino Shields – Integration of Sensors and Actuators with Arduino.		
UNIT – IV	IOT COMMUNICATION AND OPEN PLATFORMS	9
IoT Communication Models and APIs – IoT Communication Protocols – Bluetooth – WiFi – ZigBee – GPS – GSM modules – Open Platform (like Raspberry Pi) – Architecture – Programming – Interfacing – Accessing GPIO Pins – Sending and Receiving Signals Using GPIO Pins – Connecting to the Cloud.		
UNIT – V	APPLICATIONS DEVELOPMENT	9
Complete Design of Embedded Systems – Development of IoT Applications – Home Automation – Smart Agriculture – Smart Cities – Smart Healthcare–Smart Manufacturing– Supply chain management.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Explain the architecture of embedded processors.
CO2:	Write embedded C programs.
CO3:	Design simple embedded applications.
CO4:	Compare the communication models in IOT.
CO5:	Design IoT applications using Arduino/Raspberry Pi /open platform

SEMESTER VI

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
AM24601	NATURAL LANGUAGE PROCESSING	PCC	3	0	0	3
Course Objectives:						
To learn the fundamentals of natural language processing..						
To learn the word level analysis methods .						
To explore the syntactic analysis concepts.						
To understand the semantics and pragmatics.						
To learn to analyze discourses and Lexical Resources.						

UNIT – I	INTRODUCTION	9
Origins and challenges of NLP – Language Modeling: Grammar-based LM, Statistical LM - Regular Expressions, Finite-State Automata – English Morphology, Transducers for lexicon and rules, Tokenization, Detecting and Correcting Spelling Errors, Minimum Edit Distance		
UNIT – II	WORD LEVEL ANALYSIS	9
Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Backoff – Word Classes, Part-of-Speech Tagging, Rule-based, Stochastic and Transformation-based tagging, Issues in PoS tagging – Hidden Markov and Maximum Entropy models.		
UNIT – III	SYNTACTIC ANALYSIS	9
Context-Free Grammars, Grammar rules for English, Treebanks, Normal Forms for grammar – Dependency Grammar – Syntactic Parsing, Ambiguity, Dynamic Programming parsing – Shallow parsing – Probabilistic CFG, Probabilistic CYK, Probabilistic Lexicalized CFGs - Feature structures, Unification of feature structures.		
UNIT – IV	SEMANTICS AND PRAGMATICS	9
Requirements for representation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selectional restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.		
UNIT – V	DISCOURSE ANALYSIS AND LEXICAL RESOURCES	9
Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brill's Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC).		
		Total Contact Hours : 45

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	Tag a given text with basic Language features
CO2:	Implement a rule based system to tackle morphology/syntax of a language
CO3:	Design a tag set to be used for statistical processing for real-time applications.
CO4:	Compare and contrast the use of different statistical approaches for different types of NLP applications.
CO5:	Use tools to process natural language and design innovative NLP applications.

Subject Code	Subject Name	Category	L	T	P	C
CS24601	OBJECT ORIENTED SOFTWARE ENGINEERING	PCC	3	0	0	3
Course Objectives:						
To understand Software Engineering Lifecycle Models						
To Perform software requirements analysis						
To gain knowledge of the System Analysis and Design concepts using UML.						
To understand software testing and maintenance approaches						
To work on project management scheduling using DevOps						

UNIT – I	SOFTWARE PROCESS AND AGILE DEVELOPMENT	9
Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models –Introduction to Agility-Agile process-Extreme programming-XP Process-Case Study.		
UNIT – II	REQUIREMENTS ANALYSIS AND SPECIFICATION	9
Requirement analysis and specification – Requirements gathering and analysis – Software Requirement Specification – Formal system specification – Finite State Machines – Petrinets – Object modelling using UML – Use case Model – Class diagrams – Interaction diagrams – Activity diagrams – State chart diagrams – Functional modelling – Data Flow Diagram- CASE TOOLS.		
UNIT – III	SOFTWARE DESIGN	9
Software design – Design process – Design concepts – Coupling – Cohesion – Functional independence – Design patterns – Model-view-controller – Publish-subscribe – Adapter – Command– Strategy – Observer – Proxy – Facade – Architectural styles – Layered - Client Server - Tiered - Pipe and filter- User interface design-Case Study.		
UNIT – IV	SOFTWARE TESTING AND MAINTENANCE	9
Testing – Unit testing – Black box testing– White box testing – Integration and System testing– Regression testing – Debugging - Program analysis – Symbolic execution – Model Checking- CaseStudy.		
UNIT – V	PROJECT MANAGEMENT	9
Software Project Management- Software Configuration Management - Project Scheduling- DevOps: Motivation-Cloud as a platform-Operations- Deployment Pipeline:Overall Architecture Building and Testing-Deployment- Tools- Case Study.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Compare various Software Development Lifecycle Models
CO2:	Evaluate project management approaches as well as cost and schedule estimation strategies.
CO3:	Perform formal analysis on specifications
CO4:	Use UML diagrams for analysis and design
CO5:	Architect and design using architectural styles and design patterns, and test the system

Subject Code	Subject Name	Category	L	T	P	C
AM24611	CASE TOOLS LABORATORY	PCC	0	0	3	1.5
COURSE OBJECTIVES:						
- To capture the requirements specification for an intended software system. - To draw the UML diagrams for the given specification. - To map the design properly to code. - To test the software system thoroughly for all scenarios. - To improve the design by applying appropriate design patterns.						
LIST OF EXPERIMENTS						
1. Identify a software system that needs to be developed.						
2 Document the Software Requirements Specification (SRS) for the identified system.						
3. Identify use cases and develop the Use Case model.						
4 Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.						
5. Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams.						
6. Draw relevant State Chart and Activity Diagrams for the same system.						
7. Implement the system as per the detailed design.						
8 Test the software system for all the scenarios identified as per the usecase diagram.						
9 Improve the reusability and maintainability of the software system by applying appropriate design patterns.						
10. Implement the modified system and test it for various scenarios.						
						Total Contact Hours :60

SUGGESTED DOMAINS FOR MINI-PROJECT:
1. Passport automation system.
2. Book bank
3. Exam registration
4. Stock maintenance system.
5. Online course reservation system
6. Airline/Railway reservation system
7. Software personnel management system
8. Credit card processing
9. e-book management system
10. Recruitment system

HoD/BOS Chairman

Principal

11. Foreign trading system
12. Conference management system
13. BPO management system
14. Library management system
15. Student information system

Course Outcomes:	Upon completion of this course, the students will be able to:
CO1:	Perform OO analysis and design for a given problem specification.
CO2:	Identify and map basic software requirements in UML mapping.
CO3:	Improve the software quality using design patterns and to explain the rational behind applying specific design patterns
CO4:	Test the compliance of the software with the SRS.
CO5:	Construct projects using UML diagrams.

SEMESTER VII

Subject Code	Subject Name	Category	L	T	P	C
GE24902	HUMAN VALUES AND ETHICS	HSMC	2	0	0	2

Course Objectives:						
- To create awareness about values and ethics enshrined in the Constitution of India - To sensitize students about the democratic values to be upheld in the modern society. - To inculcate respect for all people irrespective of their religion or other affiliations. - To instill the scientific temper in the students' minds and develop their critical thinking. - To promote sense of responsibility and understanding of the duties of citizen.						

UNIT – I	DEMOCRATIC VALUES	6
Understanding Democratic values: Equality, Liberty, Fraternity, Freedom, Justice, Pluralism, Tolerance, Respect for All, Freedom of Expression, Citizen Participation in Governance – World Democracies: French Revolution, American Independence, Indian Freedom Movement Reading Text: Excerpts from John Stuart Mills' On Liberty		
UNIT – II	SECULAR VALUES	6
Understanding Secular values – Interpretation of secularism in Indian context - Disassociation of state from religion – Acceptance of all faiths – Encouraging non-discriminatory practices. Reading Text: Excerpt from Secularism in India: Concept and Practice by Ram Puniyani		
UNIT – III	SCIENTIFIC VALUES	6
Scientific thinking and method: Inductive and Deductive thinking, Proposing and testing Hypothesis, Validating facts using evidence based approach – Skepticism and Empiricism – Rationalism and Scientific Temper. Reading Text: Excerpt from The Scientific Temper by Antony Michaelis R		
UNIT – IV	SOCIAL ETHICS	6
Application of ethical reasoning to social problems – Gender bias and issues – Gender violence – Social discrimination – Constitutional protection and policies – Inclusive practices. Reading Text: Excerpt from 21 Lessons for the 21st Century by Yuval Noah Harari		
UNIT – V	SCIENTIFIC ETHICS	6
Transparency and Fairness in scientific pursuits – Scientific inventions for the betterment of society - Unfair application of scientific inventions – Role and Responsibility of Scientist in the modern society. Reading Text: Excerpt from American Prometheus: The Triumph and Tragedy of J.Robert Oppenheimer by Kai Bird and Martin J. Sherwin.		
		Total Contact Hours : 30

Course Outcomes:	Students will be able to
CO1:	Identify the importance of democratic, secular and scientific values in harmonious functioning of social life.
CO2:	Practice democratic and scientific values in both their personal and professional life.
CO3:	Find rational solutions to social problems.
CO4:	Behave in an ethical manner in society.
CO5:	Practice critical thinking and the pursuit of truth.

Reference books:	
1.	The Nonreligious: Understanding Secular People and Societies, Luke W. Galen Oxford University Press, 2016.
2.	Secularism: A Dictionary of Atheism, Bullivant, Stephen; Lee, Lois, Oxford University Press, 2016.
3.	The Oxford Handbook of Secularism, John R. Shook, Oxford University Press, 2017.
4.	The Civic Culture: Political Attitudes and Democracy in Five Nations by Gabriel A. Almond and Sidney Verba, Princeton University Press.
5.	Research Methodology for Natural Sciences by Soumitro Banerjee, IISc Press, January 2022.

Subject Code	Subject Name	Category	L	T	P	C
CB24701	DATA AND INFORMATION SECURITY	PCC	3	0	0	3

Course Objectives:						
- To understand the basics of Information Security - To know the legal, ethical and professional issues in Information Security - To equip the students' knowledge on digital signature, email security and web security						

UNIT – I	INTRODUCTION	9
History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC		
UNIT – II	SECURITY INVESTIGATION	9
Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues – An Overview of Computer Security - Access Control Matrix, Policy-Security policies, Confidentiality policies, Integrity policies and Hybrid policies		
UNIT – III	DIGITAL SIGNATURE AND AUTHENTICATION	9
Digital Signature and Authentication Schemes: Digital signature-Digital Signature Schemes and their Variants- Digital Signature Standards-Authentication: Overview- Requirements Protocols - Applications - Kerberos -X.509 Directory Services		
UNIT – IV	E-MAIL AND IP SECURITY	9
E-mail and IP Security: Electronic mail security: Email Architecture -PGP – Operational Descriptions Key management- Trust Model- S/MIME.IP Security: Overview- Architecture - ESP, AH Protocols IPSec Modes – Security association - Key management.		
UNIT – V	WEB SECURITY	9
Web Security: Requirements- Secure Sockets Layer- Objectives-Layers –SSL secure communication-Protocols - Transport Level Security. Secure Electronic Transaction- Entities DS Verification-SET processing.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the basics of data and information security.
CO2:	Understand the legal, ethical and professional issues in information security.
CO3:	Understand the various authentication schemes to simulate different applications.

HoD/BOS Chairman

Principal

CO4:	Understand various security practices and system security standards.
CO5:	Understand the Web security protocols for E-Commerce applications .

Subject Code	Subject Name	Category	L	T	P	C
CB24711	DATA SECURITY LABORATORY	PCC	0	0	3	1.5
Course Objectives:						
To learn different cipher techniques.						
To implement the algorithms DES,RSA,MD5,SHA-1						
To use network security tools and vulnerability assessment tools.						
LIST OF EXPERIMENTS						
1. Perform encryption, decryption using the following substitution techniques. (i) Ceaser cipher (ii) Playfair cipher (iii) Hill Cipher (iv) Vigenere cipher						

HoD/BOS Chairman

Principal

2. Perform encryption and decryption using following transposition techniques i)Railfence ii)Row& Column Transformation	
3. Apply DES algorithm for practical applications.	
4. Apply AES algorithm for practical applications.	
5. Implement RSA Algorithm using HTML and JavaScript.	
6. Implement the Diffie-Hellman Key Exchange algorithm for a given problem.	
7. Calculate the message digest of a text using the SHA-1algorithm.	
8. Implement the SIGNATURESCHEME-Digital Signature Standard.	
9. Demonstrate intrusion detection system (ids) using any tool eg.Snort or any others.	
10. Automated Attack and Penetration Tools.	
11. Exploring N-Stalker ,a Vulnerability Assessment Tool.	
12. Defeating Malware i)Building Trojans ii)Rootkit Hunter.	
	Total Contact Hours :45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Develop code for classical Encryption Techniques to solve the problems.
CO2:	Build cryptosystems by applying symmetric and public key encryption algorithms.
CO3:	Construct code for authentication algorithms.
CO4:	Develop a signature scheme using Digital signature standard.
CO5:	Demonstrate the network security system using open source tools.

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
AD24712	COMPUTATIONAL LEARNING LABORATORY	PCC	0	0	3	1.5

Course Objectives:

- To understand the data sets and apply suitable algorithms for selecting the appropriate features for analysis.
- To learn to implement supervised machine learning algorithms on standard data sets and evaluate the performance.
- To experiment the unsupervised machine learning algorithms on standard datasets and evaluate the performance.
- To build the graph based learning models for standard datasets.
- To compare the performance of different ML algorithms and select the suitable one based on the application.

LIST OF EXPERIMENTS

1. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples
2. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
3. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
4. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file and compute the accuracy with a few test data sets.
5. Implement naïve Bayesian Classifier model to classify a set of documents and measure the accuracy, precision, and recall.
6. Write a program to construct a Bayesian network to diagnose CORONA infection using standard WHO Data Set.
7. Image Classification using Logistic Regression on the MNIST Dataset
8. Building a Convolutional Neural Network (CNN) for Image Classification on CIFAR-10 Dataset
9. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select an appropriate data set for your experiment and draw graphs.

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Apply suitable algorithms for selecting the appropriate features for analysis..
CO2:	Implement supervised machine learning algorithms on standard datasets and evaluate the performance

HoD/BOS Chairman

Principal

CO3:	Apply unsupervised machine learning algorithms on standard datasets and evaluate the performance
CO4:	Build the graph based learning models for standard datasets.
CO5:	Assess and compare the performance of different ML algorithms and select the suitable one based on the application.

AM24711	SUMMER INTERNSHIP	EEC	0	0	0	2

Course Objectives:

- Get connected with reputed industry/ laboratory/academia / research institute.
- Get practical knowledge on Product Development / Services and operations / Software Design and Development / Testing / Analytics/ research/ startups/ professionalism / business processes and insights / domain knowledge/ Industry Practices/ and other related aspects and develop skills to solve related problems.
- Develop technical, soft, team skills to cater to the needs of the industry / academia / businesses / research / organizations in the core aspects of Automation, Digitalization.

The students individually undergo training in reputed firms/ research institutes / laboratories for the specified duration. After the completion of training, a detailed report should be submitted within ten days from the commencement of next semester. The students will be evaluated as per the Regulations.

Course Outcomes:	On completion of the course, the student will know about
CO1:	Industry Practices, Processes, Techniques, technology, automation and other core aspects of software industry.
CO2:	Analyze, Design solutions to complex business problems.
CO3:	Build and deploy solutions for target platform.

HoD/BOS Chairman

Principal

CO4:	Preparation of Technical reports and presentation.
-------------	--

SEMESTER- VIII

Subject Code	Subject Name	Category	L	T	P	C
AM24811	PROJECT WORK	EEC	0	0	20	10

Course Objectives:

- To train the students for gaining domain knowledge, and technical skills to solve potential business / research problems.
- Gather requirements and Design suitable software solutions and evaluate alternatives.
- To work in small teams and understand the processes and practices in the 'industry.
- Implement, Test and deploy solutions for target platforms.
- Preparing project reports and presentation.

The students shall individually / or as group work on business/research domains and related problems approved by the Department / organization that offered the internship / project.

The student can select any topic which is relevant to his/her specialization of the programme. The student should continue the work on the selected topic as per the formulated methodology. At the end of the semester, after completing the work to the satisfaction of the supervisor and review committee, a detailed report which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work, results and discussion, conclusion and references should be prepared as per the format prescribed by the University and submitted to the Head of the department. The students will be evaluated based on the report and viva-voce examination by a panel of examiners as per the Regulations.

Course Outcomes:	At the end of the project, the student will be able to
CO1:	Gain Domain knowledge and technical skill set required for solving industry / research problems.
CO2:	Provide solution architecture, module level designs, algorithms.
CO3:	Implement, test and deploy the solution for the target platform.
CO4:	Prepare detailed technical report, demonstrate and present the work.

PROFESSIONAL ELECTIVE COURSES:VERTICAL-I

Subject Code	Subject Name	Category	L	T	P	C
CCS2405	KNOWLEDGE ENGINEERING	PEC	2	0	2	3

Course Objectives:						
To understand the basics of Knowledge Engineering.						
To discuss methodologies and modeling for Agent Design and Development.						
To design and develop ontologies.						
To apply reasoning with ontologies and rules.						
To understand learning and rule learning.						

UNIT – I	REASONING UNDER UNCERTAINTY	6
Introduction – Abductive reasoning – Probabilistic reasoning: Enumerative Probabilities – Subjective Bayesian view – Belief Functions – Baconian Probability – Fuzzy Probability – Uncertainty methods - Evidence-based reasoning – Intelligent Agent – Mixed-Initiative Reasoning – Knowledge Engineering.		
UNIT – II	METHODOLOGY AND MODELING	6
Conventional Design and Development – Development tools and Reusable Ontologies – Agent Design and Development using Learning Technology – Problem Solving through Analysis and Synthesis – Inquiry-driven Analysis and Synthesis – Evidence-based Assessment – Believability Assessment – Drill-Down Analysis, Assumption-based Reasoning, and What-If Scenarios.		
UNIT – III	ONTOLOGIES – DESIGN AND DEVELOPMENT	6
Concepts and Instances – Generalization Hierarchies – Object Features – Defining Features – Representation – Transitivity – Inheritance – Concepts as Feature Values – Ontology Matching. Design and Development Methodologies – Steps in Ontology Development – Domain Understanding and Concept Elicitation – Modeling-based Ontology Specification.		
UNIT – IV	REASONING WITH ONTOLOGIES AND RULES	6
Production System Architecture – Complex Ontology-based Concepts – Reduction and Synthesis rules and the Inference Engine – Evidence-based hypothesis analysis – Rule and Ontology Matching – Partially Learned Knowledge – Reasoning with Partially Learned K		
UNIT – V	LEARNING AND RULE LEARNING	6
Machine Learning – Concepts – Generalization and Specialization Rules – Types – Formal definition of Generalization. Modelling, Learning and Problem Solving – Rule learning and Refinement – Overview – Rule Generation and Analysis – Hypothesis Learning.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Perform operations with Evidence Based Reasoning.	
2. Perform Evidence based Analysis.	
3. Perform operations on Probability Based Reasoning.	
4. Perform Believability Analysis.	
5. Implement Rule Learning and refinement.	
6. Perform analysis based on learned patterns	
7. Construction of Ontology for a given domain.	
	Total Contact Hours : 30

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	Understand the basics of Knowledge Engineering.
CO2:	Apply methodologies and modelling for Agent Design and Development.
CO3:	Design and develop ontologies.
CO4:	Apply reasoning with ontologies and rules.
CO5:	Understand learning and rule learning.

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
CCS2406	SOFT COMPUTING	PEC	2	0	2	3

Course Objectives:						
To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.						
To provide the mathematical background for carrying out the optimization associated with neural network learning						
To learn various evolutionary Algorithms.						
To become familiar with neural networks that can learn from available examples and generalize to form appropriate rules for inference systems.						
To introduce case studies utilizing the above and illustrate the Intelligent behavior of programs based on soft computing						

UNIT – I	INTRODUCTION TO SOFT COMPUTING AND FUZZY LOGIC	6
Introduction - Fuzzy Logic - Fuzzy Sets, Fuzzy Membership Functions, Operations on Fuzzy Sets, Fuzzy Relations, Operations on Fuzzy Relations, Fuzzy Rules and Fuzzy Reasoning, Fuzzy Inference Systems.		
UNIT – II	NEURAL NETWORKS	6
Supervised Learning Neural Networks – Perceptrons - Backpropagation -Multilayer Perceptrons – Unsupervised Learning Neural Networks – Kohonen Self-Organizing Networks		
UNIT – III	GENETIC ALGORITHMS	6
Chromosome Encoding Schemes -Population initialization and selection methods - Evaluation function - Genetic operators- Cross over – Mutation - Fitness Function – Maximizing function		
UNIT – IV	NEURO FUZZY MODELING	6
ANFIS architecture – hybrid learning – ANFIS as universal approximator – Coactive Neuro fuzzy modeling – Framework – Neuron functions for adaptive networks – Neuro fuzzy spectrum - Analysis of Adaptive Learning Capability		
UNIT – V	APPLICATIONS	6
Modeling a two input sine function - Printed Character Recognition – Fuzzy filtered neural networks – Plasma Spectrum Analysis – Hand written neural recognition - Soft Computing for Color Recipe Prediction.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Implementation of fuzzy control/ inference system
2. Programming exercise on classification with a discrete perceptron
3. Implementation of XOR with backpropagation algorithm
4. Implementation of self organizing maps for a specific application
5. Programming exercises on maximizing a function using Genetic algorithm.

HoD/BOS Chairman

Principal

6. Implementation of two input sine function	
7. Implementation of three input non linear function.	
	Total Contact Hours : 30

Course Outcomes:	
CO1:	Understand the fundamentals of fuzzy logic operators and inference mechanisms.
CO2:	Understand neural network architecture for AI applications such as classification and clustering.
CO3:	Learn the functionality of Genetic Algorithms in Optimization problems.
CO4:	Use hybrid techniques involving Neural networks and Fuzzy logic.
CO5:	Apply soft computing techniques in real world applications.

Textbooks:	
1.	SaJANG, J.-S. R., SUN, C.-T., & MIZUTANI, E. (1997). Neuro-fuzzy and soft computing: A computational approach to learning and machine intelligence. Upper Saddle River, NJ, Prentice Hall, 1997
2.	Himanshu Singh, Yunis Ahmad Lone, Deep Neuro-Fuzzy Systems with Python.
3.	With Case Studies and Applications from the Industry, Apress, 2020

Subject Code	Subject Name	Category	L	T	P	C
CCS2407	TEXT AND SPEECH ANALYSIS	PEC	2	0	2	3
Course Objectives:						
Understand natural language processing basics						
Apply classification algorithms to text documents						
To Build question-answering and dialogue systems						
Develop a speech recognition system						
Develop a speech synthesizer						

UNIT – I	NATURAL LANGUAGE BASICS	6
Foundations of natural language processing – Language Syntax and Structure- Text Preprocessing and Wrangling – Text tokenization – Stemming – Lemmatization – Removing stop-words – Feature Engineering for Text representation – Bag of Words model- Bag of N-Grams model – TF-IDF model Suggested Activities - Flipped classroom on NLP - Implementation of Text Preprocessing using NLTK - Implementation of TF-IDF models Suggested Evaluation Methods - Quiz on NLP Basics - Demonstration of Programs		
UNIT – II	TEXT CLASSIFICATION	6
Vector Semantics and Embeddings -Word Embeddings - Word2Vec model – Glove model – FastText model – Overview of Deep Learning models – RNN – Transformers – Overview of Text summarization and Topic Models. Suggested Activities - Flipped classroom on Feature extraction of documents - Implementation of SVM models for text classification - External learning: Text summarization and Topic models Suggested Evaluation Methods - Assignment on above topics - Quiz on RNN, Transformers - Implementing NLP with RNN and Transformers		
UNIT – III	QUESTION ANSWERING AND DIALOGUE SYSTEMS	6
Information retrieval – IR-based question answering – knowledge-based question answering – language models for QA – classic QA models – chatbots – Design of dialogue systems – evaluating dialogue systems. Suggested Activities: - Flipped classroom on language models for QA - Developing a knowledge-based question-answering system - Classic QA model development Suggested Evaluation Methods - Assignment on the above topics		

• Quiz on knowledge-based question answering system • Development of simple chatbots		
UNIT – IV	TEXT-TO-SPEECH SYNTHESIS	6
Overview. Text normalization. Letter-to-sound. Prosody, Evaluation. Signal processing - Concatenative and parametric approaches, WaveNet and other deep learning-based TTS systems. Suggested Activities: • Flipped classroom on Speech signal processing • Exploring Text normalization • Data collection • Implementation of TTS systems Suggested Evaluation Methods • Assignment on the above topics • Quiz on wavenet, deep learning-based TTS systems • Finding accuracy with different TTS systems		
UNIT – V	AUTOMATIC SPEECH RECOGNITION	6
Speech recognition: Acoustic modelling – Feature Extraction - HMM, HMM-DNN systems Suggested Activities: • Flipped classroom on Speech recognition. • Exploring Feature extraction Suggested Evaluation Methods • Assignment on the above topics • Quiz on acoustic modeling		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Create Regular expressions in Python for detecting word patterns and tokenizing text	
2. Getting started with Python and NLTK - Searching Text, Counting Vocabulary, Frequency Distribution, Collocations, Bigrams	
3. Accessing Text Corpora using NLTK in Python	
4. Write a function that finds the 50 most frequently occurring words of a text that are not stop words	
5. Implement the Word2Vec model	
6. Use a transformer for implementing classification	
7. Design a chatbot with a simple dialog system	
8. Convert text to speech and find accuracy	
9. Design a speech recognition system and find the error rate	
Total Contact Hours : 30	

Course Outcomes:	On completion of the course, the students will be able to
CO1:	Explain existing and emerging deep learning architectures for text and speech processing
CO2:	Apply deep learning techniques for NLP tasks, language modelling and machine translation.

HoD/BOS Chairman

Principal

CO3:	Explain coreference and coherence for text processing.
CO4:	Build question-answering systems, chatbots and dialogue systems.
CO5:	Apply deep learning models for building speech recognition and text-to-speech systems.

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2402	ETHICS AND AI	PEC	2	0	2	3

Course Objectives:						
- Study the morality and ethics in AI - Learn about the Ethical initiatives in the field of artificial intelligence - Study about AI standards and Regulations - Study about social and ethical issues of Robot Ethics - Study about AI and Ethics- challenges and opportunities						

UNIT – I	INTRODUCTION	6
Definition of morality and ethics in AI-Impact on society-Impact on human psychology-Impact on the legal system-Impact on the environment and the planet-Impact on trust		
UNIT – II	ETHICAL INITIATIVES IN AI	6
International ethical initiatives-Ethical harms and concerns-Case study: healthcare robots, Autonomous Vehicles , Warfare and weaponization.		

HoD/BOS Chairman

Principal

UNIT – III	AI STANDARDS AND REGULATION	6
Model Process for Addressing Ethical Concerns During System Design - Transparency of Autonomous Systems-Data Privacy Process- Algorithmic Bias Considerations - Ontological Standard for Ethically Driven Robotics and Automation Systems		
UNIT – IV	ROBO ETHICS: SOCIAL AND ETHICAL IMPLICATION OF ROBOTICS	6
Robot-Roboethics- Ethics and Morality- Moral Theories-Ethics in Science and Technology - Ethical Issues in an ICT Society- Harmonization of Principles- Ethics and Professional Responsibility- Roboethics Taxonomy.		
UNIT – V	AI AND ETHICS- CHALLENGES AND OPPORTUNITIES	6
Challenges - Opportunities- ethical issues in artificial intelligence- Societal Issues Concerning the Application of Artificial Intelligence in Medicine- decision-making role in industries- National and International Strategies on AI.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Recent case study of ethical initiatives in healthcare, autonomous vehicles and defense	
2. Exploratory data analysis on a 2 variable linear regression model	
3. Experiment the regression model without a bias and with bias	
4. Classification of a dataset from UCI repository using a perceptron with and without bias	
5. Case study on ontology where ethics is at stake	
6. Identification on optimization in AI affecting ethics	
Total Contact Hours : 30	

Course Outcomes:	On completion of the course, the students will be able to
CO1:	Learn about morality and ethics in AI speech processing
CO2:	Acquire the knowledge of real time application ethics, issues and its challenges.
CO3:	Understand the ethical harms and ethical initiatives in AI
CO4:	Learn about AI standards and Regulations like AI Agent, Safe Design of Autonomous and Semi-Autonomous Systems
CO5:	Understand the concepts of Roboethics and Morality with professional responsibilities.
CO6:	Learn about the societal issues in AI with National and International Strategies on AI

Subject Code	Subject Name	Category	L	T	P	C
CCS2436	IMAGE AND VIDEO ANALYTICS	PEC	2	0	2	3
Course Objectives:						
To understand the basics of image processing techniques for computer vision.						
To learn the techniques used for image pre-processing.						
To discuss the various object detection techniques.						
To understand the various Object recognition mechanisms.						
To elaborate on the video analytics techniques.						

UNIT – I	INTRODUCTION	6
Computer Vision – Image representation and image analysis tasks - Image representations – digitization – properties – color images – Data structures for Image Analysis - Levels of image data representation - Traditional and Hierarchical image data structures.		
UNIT – II	IMAGE PRE-PROCESSING	6
Local pre-processing - Image smoothing - Edge detectors - Zero-crossings of the second derivative - Scale in image processing - Canny edge detection - Parametric edge models - Edges		

HoD/BOS Chairman

Principal

in multi spectral images - Local pre-processing in the frequency domain - Line detection by local pre processing operators - Image restoration.		
UNIT – III	OBJECT DETECTION USING MACHINE LEARNING	6
Object detection– Object detection methods – Deep Learning framework for Object detection bounding box approach-Intersection over Union (IoU) –Deep Learning Architectures-R-CNN-Faster R-CNN-You Only Look Once(YOLO)-Salient features-Loss Functions-YOLO architectures		
UNIT – IV	FACE RECOGNITION AND GESTURE RECOGNITION	6
Face Recognition-Introduction-Applications of Face Recognition-Process of Face Recognition-DeepFace solution by Facebook-FaceNet for Face Recognition- Implementation using FaceNet Gesture Recognition.		
UNIT – V	VIDEO ANALYTICS	6
Video Processing – use cases of video analytics-Vanishing Gradient and exploding gradient problem ResNet architecture-ResNet and skip connections-Inception Network-GoogleNet architecture Improvement in Inception v2-Video analytics-ResNet and Inception v3.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Write a program that computes the T-pyramid of an image.	
2. Write a program that derives the quad tree representation of an image using the homogeneity criterion of equal intensity	
3. Develop programs for the following geometric transforms: (a) Rotation (b) Change of scale (c) Skewing (d) Affine transform calculated from three pairs of corresponding points (e) Bilinear transform calculated from four pairs of corresponding points.	
4. Develop a program to implement Object Detection and Recognition	
5. Develop a program for motion analysis using moving edges and apply it to your image sequences	
6. Develop a program for Facial Detection and Recognition	
7. Write a program for event detection in video surveillance system	
Total Contact Hours : 30	

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	Understand the basics of image processing techniques for computer vision and video analysis.
CO2:	Explain the techniques used for image pre-processing.
CO3:	Develop various object detection techniques.
CO4:	Understand the various face recognition mechanisms.
CO5:	Elaborate on deep learning-based video analytics.

Subject Code	Subject Name	Category	L	T	P	C
CCS2437	COMPUTER VISION	PEC	2	0	2	3

Course Objectives:						
- To understand the fundamental concepts related to Image formation and processing.. - To learn feature detection, matching and detection. - To become familiar with feature based alignment and motion estimation - To develop skills on 3D reconstruction - To understand image based rendering and recognition.						

UNIT – I	INTRODUCTION TO IMAGE FORMATION AND PROCESSING	6
Computer Vision - Geometric primitives and transformations - Photometric image formation - The digital camera - Point operators - Linear filtering - More neighborhood operators - Fourier transforms - Pyramids and wavelets - Geometric transformations - Global optimization.		
UNIT – II	FEATURE DETECTION, MATCHING AND SEGMENTATION	6
Points and patches - Edges - Lines - Segmentation - Active contours - Split and merge - Mean shift and mode finding - Normalized cuts - Graph cuts and energy-based methods.		
UNIT – III	FEATURE-BASED ALIGNMENT & MOTION ESTIMATION	6
2D and 3D feature-based alignment - Pose estimation - Geometric intrinsic calibration - Triangulation - Two-frame structure from motion - Factorization - Bundle adjustment - Constrained structure and motion - Translational alignment - Parametric motion - Spline-based motion - Optical flow - Layered motion.		
UNIT – IV	3D RECONSTRUCTION	6
Shape from X - Active rangefinding - Surface representations - Point-based representations-		

HoD/BOS Chairman

Principal

Volumetric representations - Model-based reconstruction - Recovering texture maps and albedos.		
UNIT – V	IMAGE-BASED RENDERING AND RECOGNITION	6
View interpolation Layered depth images - Light fields and Lumigraphs - Environment mattes - Video based rendering-Object detection - Face recognition - Instance recognition - Category recognition - Context and scene understanding- Recognition databases and test sets.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
OpenCV computer vision Library for OpenCV in Python / PyCharm or C++ / Visual Studio or or equivalent	
• OpenCV Installation and working with Python • Basic Image Processing - loading images, Cropping, Resizing, Thresholding, Contour analysis, Blob detection • Image Annotation – Drawing lines, text circle, rectangle, ellipse on images	
Image Enhancement - Understanding Color spaces, color space conversion, Histogram equalization, Convolution, Image smoothing, Gradients, Edge Detection	
• Image Features and Image Alignment – Image transforms – Fourier, Hough, Extract ORB Image features, Feature matching, cloning, Feature matching based image alignment • Image segmentation using Graphcut / Grabcut • Camera Calibration with circular grid • Pose Estimation • 3D Reconstruction – Creating Depth map from stereo images • Object Detection and Tracking using Kalman Filter, Camshift	
1. docs.opencv.org 2. https://opencv.org/opencv-free-course/	
Total Contact Hours : 30	

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	To understand basic knowledge, theories and methods in image processing and computer vision..
CO2:	To implement basic and some advanced image processing techniques in OpenCV.
CO3:	To apply 2D a feature-based based image alignment, segmentation and motion estimations.
CO4:	To apply 3D image reconstruction techniques
CO5:	To design and develop innovative image processing and computer vision applications.

Subject Code	Subject Name	Category	L	T	P	C
CCS2435	EXPLORATORY DATA ANALYSIS	PEC	2	0	2	3
Course Objectives:						
- To outline an overview of exploratory data analysis. - To implement data visualization using Matplotlib. - To perform univariate data exploration and analysis. - To apply bivariate data exploration and analysis. - To use Data exploration and visualization techniques for multivariate and time series data.						

UNIT – I	EXPLORATORY DATA ANALYSIS	6
EDA fundamentals – Understanding data science – Significance of EDA – Making sense of data – Comparing EDA with classical and Bayesian analysis – Software tools for EDA - Visual Aids for EDA- Data transformation techniques-merging database, reshaping and pivoting, Transformation techniques.		
UNIT – II	EDA USING PYTHON	6
Data Manipulation using Pandas – Pandas Objects – Data Indexing and Selection – Operating on Data – Handling Missing Data – Hierarchical Indexing – Combining datasets – Concat, Append, Merge and Join – Aggregation and grouping – Pivot Tables – Vectorized String Operations.		
UNIT – III	UNIVARIATE ANALYSIS	6
Introduction to Single variable: Distribution Variables - Numerical Summaries of Level and Spread - Scaling and Standardizing – In		
UNIT – IV	BIVARIATE ANALYSIS	6
Relationships between Two Variables - Percentage Tables - Analysing Contingency Tables - Handling Several Batches - Scatterplots and Resistant Lines.		

HoD/BOS Chairman

Principal

UNIT – V	MULTIVARIATE AND TIME SERIES ANALYSIS	6
Introducing a Third Variable - Causal Explanations - Three-Variable Contingency Tables and Beyond – Fundamentals of TSA – Characteristics of time series data – Data Cleaning – Time based indexing – Visualizing – Grouping – Resampling.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Install the data Analysis and Visualization tool: R/ Python /Tableau Public/ Power BI.
2. Perform exploratory data analysis (EDA) with datasets like email data set. Export all your Emails as a dataset, import them inside a pandas data frame, visualize them and get different insights from the data.
3. Working with Numpy arrays, Pandas data frames , Basic plots using Matplotlib.
4. Explore various variable and row filters in R for cleaning data. Apply various plot features in R on sample data sets and visualize.
5. Perform Time Series Analysis and apply the various visualization techniques.
6. Perform Data Analysis and representation on a Map using various Map data sets with Mouse Rollover effect, user interaction, etc..
7. Build cartographic visualization for multiple datasets involving various countries of the world states and districts in India etc.
8. Perform EDA on Wine Quality Data Set.
9. Use a case study on a data set and apply the various EDA and visualization techniques and present an analysis report.
Total Contact Hours : 30

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	Understand the fundamentals of exploratory data analysis.
CO2:	Implement the data visualization using Matplotlib.
CO3:	Perform univariate data exploration and analysis.
CO4:	Apply bivariate data exploration and analysis.
CO5:	Use Data exploration and visualization techniques for multivariate and time series data.

PROFESSIONAL ELECTIVE COURSES:VERTICAL-II

Subject Code	Subject Name	Category	L	T	P	C
CCS2408	APP DEVELOPMENT	PEC	2	0	2	3

Course Objectives:						
- To learn development of native applications with basic GUI Components - To develop cross-platform applications with event handling - To develop applications with location and data storage capabilities - To develop web applications with database access - To learn development of native applications with basic GUI Components						

UNIT – I	FUNDAMENTALS OF MOBILE & WEB APPLICATION DEVELOPMENT	6
Basics of Web and Mobile application development, Native App, Hybrid App, Cross-platform App, What is Progressive Web App, Responsive Web design,		
UNIT – II	NATIVE APP DEVELOPMENT USING JAVA	6
Native Web App, Benefits of Native App, Scenarios to create Native App, Tools for creating Native App, Cons of Native App, Popular Native App Development Frameworks, Java & Kotlin for Android, Swift & Objective-C for iOS, Basics of React Native, Native Components, JSX, State, Props		
UNIT – III	HYBRID APP DEVELOPMENT	6
Hybrid Web App, Benefits of Hybrid App, Criteria for creating Native App, Tools for creating Hybrid App, Cons of Hybrid App, Popular Hybrid App Development Frameworks, Ionic, Apache Cordova,		
UNIT – IV	CROSS-PLATFORM APP DEVELOPMENT USING REACT-NATIVE	6
What is Cross-platform App, Benefits of Cross-platform App, Criteria for creating Cross-platform App, Tools for creating Cross-platform App, Cons of Cross-platform App, Popular Cross-platform App Development Frameworks, Flutter, Xamarin, React-Native, Basics of React Native, Native Components, JSX, State, Props		

HoD/BOS Chairman

Principal

UNIT – V	NON-FUNCTIONAL CHARACTERISTICS OF APP FRAMEWORKS	6
Comparison of different App frameworks, Build Performance, App Performance, Debugging capabilities, Time to Market, Maintainability, Ease of Development, UI/UX, Reusability		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Using react native, build a cross platform application for a BMI calculator.	
2. Build a cross platform application for a simple expense manager which allows entering expenses and income on each day and displays category wise weekly income and expense.	
3. Develop a cross platform application to convert units from imperial system to metric system (km to miles, kg to pounds etc.,)	
4. Design and develop a cross platform application for day to day task (to-do) management.	
5. Design an android application using Cordova for a user login screen with username, password, reset button and a submit button. Also, include header image and a label. Use layout managers	
6. Design and develop an android application using Apache Cordova to find and display the current location of the user.	
7. Write programs using Java to create Android application having Databases	
• For a simple library application. • For displaying books available, books lend, book reservation.	
Assume that student information is available in a database which has been stored in a database server.	
Total Contact Hours : 30	

Course Outcomes:	At the end of this course, the students will be able to:
CO1:	Develop Native applications with GUI Components.
CO2:	Develop hybrid applications with basic event handling.
CO3:	Implement cross-platform applications with location and data storage capabilities.
CO4:	Implement cross platform applications with basic GUI and event handling.
CO5:	Develop web applications with cloud database access.

Textbooks:	
1.	Head First Android Development, Dawn Griffiths, O'Reilly, 1st edition
2.	Apache Cordova in Action, Raymond K. Camden, Manning, 2015
3.	Full Stack React Native: Create beautiful mobile apps with JavaScript and React Native, Anthony Accomazzo, Houssein Djirdeh, Sophia Shoemaker, Devin Abbott, FullStack publishing

Reference books/other materials/web resources:	
1.	Android Programming for Beginners, John Horton, Packt Publishing, 2nd Edition
2.	Native Mobile Development by Shaun Lewis, Mike Dunn
3.	Building Cross-Platform Mobile and Web Apps for Engineers and Scientists: An Active Learning Approach, Pawan Lingras, Matt Triff, Rucha Lingras

Subject Code	Subject Name	Category	L	T	P	C
CCS2445	INTERNET PROGRAMMING	PEC	2	0	2	3
Course Objectives:						
- To understand different Internet Technologies - To learn java-specific web services architecture - To Develop web applications using frameworks						

UNIT – I	WEBSITE BASICS,HTML5,CSS3,WEB2.0	7
Web Essentials: Clients, Servers and Communication – The Internet – World wide web – HTTP Request Message–HTTPResponseMessage –WebClients –WebServers –HTML5–Tables– Lists – Image – HTML5 control elements –Drag and Drop – Audio – Video controls - CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations. Bootstrap Framework		
UNIT – II	CLIENT SIDE PROGRAMMING	6
Java Script: An introduction to JavaScript–JavaScript DOM Model-Exception Handling- Validation- Built-in objects-Event Handling- DHTML with JavaScript- JSON introduction – Syntax – Function Files.		
UNIT – III	SERVER SIDE PROGRAMMING	5
Servlets: Java Servlet Architecture- Servlet Life Cycle- Form GET and POST actions- Session Handling- Understanding Cookies- DATABASE CONNECTIVITY: JDBC.		
UNIT – IV	PHP AND XML	6
An introduction to PHP: PHP- Using PHP- Variables- Program control- Built-in functions- Form Validation. XML: Basic XML- Document Type Definition- XML Schema, XML Parsers and Validation, XSL		
UNIT – V	INTRODUCTION TO ANGULAR AND WEB APPLICATIONS FRAMEWORKS	6
Introduction to AngularJS, MVC Architecture, Understanding ng attributes, Expressions and data binding, Conditional Directives, Style Directives, Controllers, Filters, Forms, Routers, Modules, Services; Web Applications Frameworks and Tools – Firebase- Docker- Node JS- React- Django- UI & UX.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS:	
1	Create a webpage with the following using HTML. To embed an image map in a webpage. To fix the hotspots. Show all the related information when the hotspots are clicked.
2	Create a webpage with all types of Cascading style sheets.
3	ClientSide Scripts for Validating WebForm Controls using DHTML.
4	Installation of Apache Tomcat webserver.
5	Write programs in Java using Servlets:
6	To invoke servlets from HTML forms.
7	Session Tracking.
8	Write programs in Java to create three-tier applications using JSP and Databases For conducting on-line examination. For displaying studentmarklist. Assume that student information is available in a database which has been stored in a database server.
9.	Programs using XML–Schema–XSLT/XSL.
Total Contact Hours: 30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Construct a basic website using HTML and Cascading Style Sheets
CO2:	Build dynamic webpage with validation using JavaScript objects and by applying different event handling mechanisms.
CO3:	Develop server side programs using Servlets and JSP.
CO4:	Construct simple webpages in PHP and to represent data in XML format.
CO5:	Develop interactive web applications

Textbooks:	
1.	Deitel and Deitel and Nieto, Internet and World Wide Web - How to Program, Prentice Hall, 5th Edition, 2011.

Subject Code	Subject Name	Category	L	T	P	C
CCS2410	UI AND UX DESIGN	PEC	2	0	2	3
Course Objectives:						
- To provide a sound knowledge in UI & UX - To understand the need for UI and UX - To understand the various Research Methods used in Design - To explore the various Tools used in UI & UX - Creating a wireframe and prototype						

UNIT – I	FOUNDATIONS OF DESIGN	6
UI vs. UX Design - Core Stages of Design Thinking - Divergent and Convergent Thinking - Brainstorming and Game storming - Observational Empathy		
UNIT – II	FOUNDATIONS OF UI DESIGN	6
Visual and UI Principles - UI Elements and Patterns - Interaction Behaviors and Principles – Branding - Style Guides		
UNIT – III	FOUNDATIONS OF UX DESIGN	6
Introduction to User Experience - Why You Should Care about User Experience - Understanding User Experience - Defining the UX Design Process and its Methodology - Research in User Experience Design - Tools and Method used for Research - User Needs and its Goals - Know about Business Goals		
UNIT – IV	WIREFRAMING, PROTOTYPING AND TESTING	6
Sketching Principles - Sketching Red Routes - Responsive Design – Wireframing - Creating Wireflows - Building a Prototype - Building High-Fidelity Mockups - Designing Efficiently with Tools - Interaction Patterns - Conducting Usability Tests - Other Evaluative User Research Methods - Synthesizing Test Findings - Prototype Iteration		
UNIT – V	RESEARCH, DESIGNING, IDEATING, & INFORMATION ARCHITECTURE	6

Identifying and Writing Problem Statements - Identifying Appropriate Research Methods - Creating Personas - Solution Ideation - Creating User Stories - Creating Scenarios - Flow Diagrams - Flow Mapping - Information Architecture	
	Total Contact Hours : 30

LIST OF EXPERIMENTS	
1.Designing a Responsive layout for an societal application	
2. Exploring various UI Interaction Patterns	
3. Developing an interface with proper UI Style Guides	
4. Developing Wireflow diagram for application using open source software	
5. Exploring various open source collaborative interface Platform	
6. Hands on Design Thinking Process for a new product	
7. Brainstorming feature for proposed product	
8. Defining the Look and Feel of the new Project	
9. Create a Sample Pattern Library for that product (Mood board, Fonts, Colors based on UI principles)	
10. Identify a customer problem to solve	
11. Conduct end-to-end user research - User research, creating personas, Ideation	
12. Sketch, design with popular tool and build a prototype and perform usability testing and identify improvements	
	Total Contact Hours : 30

Course Outcomes:	On completion of the course, the students will be able to:
CO1:	Build UI for user Applications
CO2:	Evaluate UX design of any product or application
CO3:	Demonstrate UX Skills in product development
CO4:	Implement Sketching principles
CO5:	Create Wireframe and Prototype

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2411	SOFTWARE TESTING AND AUTOMATION	PEC	2	0	2	3
Course Objectives:						
- To understand the basics of software testing - To learn how to do the testing and planning effectively - To build test cases and execute them - To focus on wide aspects of testing and understanding multiple facets of testing - To get an insight about test automation and the tools used for test automation						

UNIT – I	FOUNDATIONS OF SOFTWARE TESTING	6
Why do we test Software?, Black-Box Testing and White-Box Testing, Software Testing Life Cycle, V-model of Software Testing, Program Correctness and Verification, Reliability versus Safety, Failures, Errors and Faults (Defects), Software Testing Principles, Program Inspections, Stages of Testing: Unit Testing, Integration Testing, System Testing		
UNIT – II	TEST PLANNING	6
The Goal of Test Planning, High Level Expectations, Intergroup Responsibilities, Test Phases, Test Strategy, Resource Requirements, Tester Assignments, Test Schedule, Test Cases, Bug Reporting, Metrics and Statistics.		
UNIT – III	TEST DESIGN AND EXECUTION	6
Test Objective Identification, Test Design Factors, Requirement identification, Testable Requirements, Modeling a Test Design Process, Modeling Test Results, Boundary Value Testing, Equivalence Class Testing, Path Testing, Data Flow Testing, Test Design Preparedness Metrics, Test Case Design Effectiveness, Model-Driven Test Design, Test Procedures, Test Case Organization and Tracking, Bug Reporting, Bug Life Cycle.		
UNIT – IV	ADVANCED TESTING CONCEPTS	6
Performance Testing: Load Testing, Stress Testing, Volume Testing, Fail-Over Testing, Recovery Testing, Configuration Testing, Compatibility Testing, Usability Testing, Testing the Documentation, Security testing, Testing in the Agile Environment, Testing Web and Mobile Applications.		
UNIT – V	TEST AUTOMATION AND TOOLS	6

HoD/BOS Chairman

Principal

Automated Software Testing, Automate Testing of Web Applications, Selenium: Introducing Web Driver and Web Elements, Locating Web Elements, Actions on Web Elements, Different Web Drivers, Understanding Web Driver Events, Testing: Understanding Testing.xml, Adding Classes, Packages, Methods to Test, Test Reports.	
	Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Develop the test plan for testing an e-commerce web/mobile application (www.amazon.in).	
2. Design the test cases for testing the e-commerce application	
3. Test the e-commerce application and report the defects in it.	
4. Develop the test plan and design the test cases for an inventory control system.	
5. Execute the test cases against a client server or desktop application and identify the defects.	
6. Test the performance of the e-commerce application.	
7. Automate the testing of e-commerce applications using Selenium.	
8. Integrate TestNG with the above test automation.	
9. Mini Project:	
a) Build a data-driven framework using Selenium and TestNG	
b) Build Page object Model using Selenium and TestNG	
c) Build BDD framework with Selenium, TestNG and Cucumber	
	Total Contact Hours : 30

Course Outcomes:	On completion of the course, the students will be able to:
CO1:	Understand the basic concepts of software testing and the need for software testing
CO2:	Design Test planning and different activities involved in test planning
CO3:	Design effective test cases that can uncover critical defects in the application
CO4:	Carry out advanced types of testing
CO5:	Automate the software testing using Selenium and TestNG

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2404	WEB APPLICATION SECURITY	PEC	2	0	2	3
Course Objectives:						
To understand the fundamentals of web application security						
To focus on wide aspects of secure development and deployment of web applications						
To learn how to build secure APIs						
To learn the basics of vulnerability assessment and penetration testing						
To get an insight about Hacking techniques and Tools						

UNIT – I	FUNDAMENTALS OF WEB APPLICATION SECURITY	6
The history of Software Security-Recognizing Web Application Security Threats, Web Application Security, Authentication and Authorization, Secure Socket layer, Transport layer Security, Session Management-Input Validation		
UNIT – II	SECURE DEVELOPMENT AND DEPLOYMENT	5
Web Applications Security - Security Testing, Security Incident Response Planning, The Microsoft Security Development Lifecycle (SDL), OWASP Comprehensive Lightweight Application Security Process (CLASP), The Software Assurance Maturity Model (SAMM)		
UNIT – III	SECURE API DEVELOPMENT	6
API Security- Session Cookies, Token Based Authentication, Securing Natter APIs: Addressing threats with Security Controls, Rate Limiting for Availability, Encryption, Audit logging, Securing service-to-service APIs: API Keys , OAuth2, Securing Microservice APIs: Service Mesh, Locking Down Network Connections, Securing Incoming Requests.		
UNIT – IV	VULNERABILITY ASSESSMENT AND PENETRATION TESTING	6
Vulnerability Assessment Lifecycle, Vulnerability Assessment Tools: Cloud-based vulnerability scanners, Host-based vulnerability scanners, Network-based vulnerability scanners, Database based vulnerability scanners, Types of Penetration Tests: External Testing, Web Application Testing, Internal Penetration Testing, SSID or Wireless Testing, Mobile Application Testing.		
UNIT – V	HACKING TECHNIQUES AND TOOLS	7

HoD/BOS Chairman

Principal

Social Engineering, Injection, Cross-Site Scripting(XSS), Broken Authentication and Session Management, Cross-Site Request Forgery, Security Misconfiguration, Insecure Cryptographic Storage, Failure to Restrict URL Access, Tools: Comodo, OpenVAS, Nexpose, Nikto, Burp Suite, etc.	
	Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Install wire shark and explore the various protocols a. Analyze the difference between HTTP vs HTTPS b. Analyze the various security mechanisms embedded with different protocols.	
2. Identify the vulnerabilities using OWASP ZAP tool	
1. Create simple REST API using python for following operation . GET a. PUSH b. POST c. DELETE	
2. Install Burp Suite to do following vulnerabilities: . SQL injection a. cross-site scripting (XSS)	
5. Attack the website using Social Engineering method	
	Total Contact Hours : 30

Course Outcomes:	
CO1:	Understanding the basic concepts of web application security and the need for it
CO2:	Be acquainted with the process for secure development and deployment of web applications
CO3:	Acquire the skill to design and develop Secure Web Applications that use Secure APIs
CO4:	Be able to get the importance of carrying out vulnerability assessment and penetration testing
CO5:	Acquire the skill to think like a hacker and to use hackers tool sets

Subject Code	Subject Name	Category	L	T	P	C
CCS2412	DEVOPS	PEC	2	0	2	3
Course Objectives:						
To introduce DevOps terminology, definition & concepts						
To understand the different Version control tools like Git, Mercurial						
To understand the concepts of Continuous Integration/ Continuous Testing/ Continuous Deployment)						
To understand Configuration management using Ansible						
Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve real world problems						

UNIT – I	INTRODUCTION TO DEVOPS	6
Devops Essentials - Introduction To AWS, GCP, Azure - Version control systems: Git and Github.		
UNIT – II	COMPILE AND BUILD USING MAVEN & GRADLE	6
Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases(compile build, test, package) Maven Profiles, Maven repositories(local, central, global),Maven plugins, Maven create and build Artifacts, Dependency management, Installation of Gradle, Understand build using Gradle.		
UNIT – III	CONTINUOUS INTEGRATION USING JENKINS	6
Install & Configure Jenkins, Jenkins Architecture Overview, Creating a Jenkins Job, Configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, Commonly used plugins (Git Plugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters). Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkins workspace.		
UNIT – IV	CONFIGURATION MANAGEMENT USING ANSIBLE	6
Ansible Introduction, Installation, Ansible master/slave configuration, YAML basics, Ansible modules, Ansible Inventory files, Ansible playbooks, Ansible Roles, adhoc commands in ansible		
UNIT – V	BUILDING DEVOPS PIPELINES USING AZURE	6
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build		

HoD/BOS Chairman

Principal

a sample code, Modify azure-pipelines.yaml file	
	Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Create Maven Build pipeline in Azure
2. Run regression tests using Maven Build pipeline in Azure
3. Install Jenkins in Cloud
4. Create CI pipeline using Jenkins
5. Create a CD pipeline in Jenkins and deploy in Cloud
6. Create an Ansible playbook for a simple web application infrastructure
7. Build a simple application using Gradle
8. Install Ansible and configure ansible roles and to write playbooks
Total Contact Hours : 30

Course Outcomes:	
CO1:	Understand different actions performed through Version control tools like Git.
CO2:	Perform Continuous Integration and Continuous Testing and Continuous Deployment using Jenkins by building and automating test cases using Maven & Gradle.
CO3:	Ability to Perform Automated Continuous Deployment
CO4:	Ability to do configuration management using Ansible
CO5:	Understand to leverage Cloud-based DevOps tools using Azure DevOps

Textbooks:	
1.	Roberto Vormittag, "A Practical Guide to Git and GitHub for Windows Users: From Beginner to Expert in Easy Step-By-Step Exercises", Second Edition, Kindle Edition, 2016.
2.	Jason Cannon, "Linux for Beginners: An Introduction to the Linux Operating System and Command Line", Kindle Edition, 2014

Reference books/other materials/webresources:

Average:	3	3	3	2	3	-	-	-	-	-	-	2	2	2

Subject Code	Subject Name	Category	L	T	P	C
CCS2413	PRINCIPLES OF PROGRAMMING LANGUAGES	PEC	2	0	2	3

Course Objectives:						
- To understand and describe syntax and semantics of programming languages - To understand data, data types, and basic statements - To understand call-return architecture and ways of implementing them - To understand object-orientation, concurrency, and event handling in programming languages - To develop programs in non-procedural programming paradigms						

UNIT – I	SYNTAX AND SEMANTICS	6
Evolution of programming languages – describing syntax – context-free grammars – attribute grammars – describing semantics – lexical analysis – parsing – recursive-descent – bottom up parsing		
UNIT – II	DATA, DATA TYPES, AND BASIC STATEMENTS	6
Names – variables – binding – type checking – scope – scope rules – lifetime and garbage collection – primitive data types – strings – array types – associative arrays – record types – union types – pointers and references – Arithmetic expressions – overloaded operators – type conversions – relational and boolean expressions – assignment statements – mixed mode assignments – control structures – selection – iterations – branching – guarded statements		
UNIT – III	SUBPROGRAMS AND IMPLEMENTATIONS	6
Subprograms – design issues – local referencing – parameter passing – overloaded methods – generic methods – design issues for functions – semantics of call and return – implementing simple subprograms – stack and dynamic local variables – nested subprograms – blocks – dynamic scoping		
UNIT – IV	OBJECT-ORIENTATION, CONCURRENCY, AND EVENT HANDLING	6
Object-orientation – design issues for OOP languages – implementation of object-oriented constructs – concurrency – semaphores – monitors – message passing – threads – statement level concurrency – exception handling – event handling		
UNIT – V	FUNCTIONAL AND LOGIC PROGRAMMING LANGUAGES	6

Introduction to lambda calculus – fundamentals of functional programming languages – Programming with Scheme – Programming with ML – Introduction to logic and logic programming – Programming with Prolog – multi-paradigm languages
Total Contact Hours :30

LIST OF EXPERIMENTS:	
1	Develop a problem to solve balancing the symbols using control structures in C
2	Develop a problem to solve Euler's method using C
3	Develop a program to solve Shortest path algorithm using C
4	Develop a java application with an Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club funds. Generate pay slips for the employees with their gross and net salary.
5	Implement exception handling and creation of user defined exceptions.
6	Develop stack and queue data structures using classes and objects in Java
7	Implementing a Scientific problems using Conditionals and Iterative loops. (Number series, Number Patterns, pyramid pattern) using Python
8	Implementing real-time/technical applications using Lists, Tuples. (Items present in a library/Components of a car/ Materials required for construction of a building – operations of list & tuples)using Python
9	Implementing programs using Functions. (Factorial, largest number in a list, area of shape)using Python
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Describe syntax and semantics of programming languages
CO2:	Explain data, data types, and basic statements of programming languages
CO3:	Design and implement subprogram constructs
CO4:	Apply object-oriented, concurrency, and event handling programming constructs and Develop programs in Scheme, ML, and Prolog
CO5:	Understand and adopt new programming languages

Textbooks:

PROFESSIONAL ELECTIVE COURSES:VERTICAL-III

Subject Code	Subject Name	Category	L	T	P	C
CCS2403	CLOUD COMPUTING	PEC	2	0	2	3
Course Objectives:						
To understand the principles of cloud architecture, models and infrastructure						
To understand the concepts of virtualization and virtual machines.						
To gain knowledge about virtualization Infrastructure.						
To explore and experiment with various Cloud deployment environments.						
To learn about the security issues in the cloud environment.						

UNIT – I	CLOUD ARCHITECTURE MODELS AND INFRASTRUCTURE	6
Cloud Architecture: System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture – Cloud deployment models – Cloud service models; Cloud Infrastructure: Architectural Design of Compute and Storage Clouds – Design Challenges		
UNIT – II	VIRTUALIZATION BASICS	6
Virtual Machine Basics – Taxonomy of Virtual Machines – Hypervisor – Key Concepts – Virtualization structure – Implementation levels of virtualization – Virtualization Types: Full Virtualization – Para Virtualization – Hardware Virtualization – Virtualization of CPU, Memory and I/O devices.		
UNIT – III	VIRTUALIZATION INFRASTRUCTURE AND DOCKER	7
Desktop Virtualization – Network Virtualization – Storage Virtualization – System-level of Operating Virtualization – Application Virtualization – Virtual clusters and Resource Management – Containers vs. Virtual Machines – Introduction to Docker – Docker Components – Docker Container – Docker Images and Repositories.		
UNIT – IV	CLOUD DEPLOYMENT ENVIRONMENT	6
Google App Engine – Amazon AWS – Microsoft Azure; Cloud Software Environments – Eucalyptus – OpenStack.		
UNIT – V	CLOUD SECURITY	5
Virtualization System-Specific Attacks: Guest hopping – VM migration attack – hyperjacking. Data Security and Storage; Identity and Access Management (IAM) - IAM Challenges - IAM Architecture and Practice.		
		Total Contact Hours :30

HoD/BOS Chairman

Principal

LIST OF EXPERIMENTS	
1. Install Virtualbox/VMware/ Equivalent open source cloud Workstation with different flavours of Linux or Windows OS on top of windows 8 and above.	
2. Install a C compiler in the virtual machine created using a virtual box and execute Simple Programs.	
3. Install Google App Engine. Create a hello world app and other simple web applications using python/java.	
4. Use the GAE launcher to launch the web applications.	
5. Simulate a cloud scenario using Cloud Sim and run a scheduling algorithm that is not present in Cloud Sim.	
6. Find a procedure to transfer the files from one virtual machine to another virtual machine.	
7. Install Hadoop single node cluster and run simple applications like wordcount.	
8. Creating and Executing Your First Container Using Docker.	
9. Run a Container from Docker Hub	
	Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the design challenges in the cloud.
CO2	Apply the concept of virtualization and its types.
CO3	Experiment with virtualization of hardware resources and Docker.
CO4	Develop and deploy services on the cloud and set up a cloud environment.
CO5	Explain security challenges in the cloud environment.

Subject Code	Subject Name	Category	L	T	P	C
CCS2414	VIRTUALIZATION	PEC	2	0	2	3
Course Objectives:						
To Learn the basics and types of Virtualization						
To understand the Hypervisors and its types						
To Explore the Virtualization Solutions						
To Experiment the virtualization platforms						

UNIT – I	INTRODUCTION TO VIRTUALIZATION	7
Virtualization and cloud computing - Need of virtualization – cost, administration, fast deployment, reduce infrastructure cost – limitations- Types of hardware virtualization: Full virtualization - partial virtualization - Paravirtualization-Types of Hypervisors		
UNIT – II	SERVER AND DESKTOP VIRTUALIZATION	6
Virtual machine basics- Types of virtual machines- Understanding Server Virtualization- types of server virtualization- Business Cases for Server Virtualization – Uses of Virtual Server Consolidation – Selecting Server Virtualization Platform-Desktop Virtualization-Types of Desktop Virtualization		
UNIT – III	NETWORK VIRTUALIZATION	6
Introduction to Network Virtualization-Advantages- Functions-Tools for Network Virtualization-VLAN-WAN Architecture-WAN Virtualization		
UNIT – IV	STORAGE VIRTUALIZATION	5
Memory Virtualization-Types of Storage Virtualization-Block, File-Address space Remapping-Risks of Storage Virtualization-SAN-NAS-RAID		
UNIT – V	VIRTUALIZATION TOOLS	6
VMWare-Amazon AWS-Microsoft HyperV- Oracle VM Virtual Box - IBM PowerVM- Google Virtualization- Case study		
		Total Contact Hours :30

LIST OF EXPERIMENTS
1. Create type 2 virtualization in VMWARE or any equivalent Open Source Tool. Allocate memory and storage space as per requirement. Install Guest OS on that VMWARE.
2. a. Shrink and extend virtual disk b. Create, Manage, Configure and schedule snapshots c. Create Spanned, Mirrored and Striped volume d. Create RAID 5 volume
3. a. Desktop Virtualization using VNC b. Desktop Virtualization using Chrome Remote Desktop
4. Create type 2 virtualization on ESXI 6.5 server
5. Create a VLAN in CISCO packet tracer

HoD/BOS Chairman

Principal

6. Install KVM in Linux	
7. Create Nested Virtual Machine(VM under another VM)	
	Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Analyse the virtualization concepts and Hypervisor
CO2:	Apply the Virtualization for real-world applications
CO3:	Install & Configure the different VM platforms
CO4:	Experiment with the VM with various software

Textbooks:	
1.	Cloud computing a practical approach - Anthony T.Velte , Toby J. Velte Robert Elsenpeter, TATA McGraw- Hill , New Delhi – 2010

Subject Code	Subject Name	Category	L	T	P	C
CCS2409	CLOUD SERVICES MANAGEMENT	PEC	2	0	2	3
Course Objectives:						
Introduce Cloud Service Management terminology, definition & concepts						
Compare and contrast cloud service management with traditional IT service management						
Identify strategies to reduce risk and eliminate issues associated with adoption of cloud Services						
Select appropriate structures for designing, deploying and running cloud-based services in a business environment						

HoD/BOS Chairman

Principal

- Illustrate the benefits and drive the adoption of cloud-based services to solve real world Problems

UNIT – I	CLOUD SERVICE MANAGEMENT FUNDAMENTALS	6
Cloud Ecosystem, The Essential Characteristics, Basics of Information Technology Service Management and Cloud Service Management, Service Perspectives, Cloud Service Models, Cloud Service Deployment Models		
UNIT – II	CLOUD SERVICES STRATEGY	6
Cloud Strategy Fundamentals, Cloud Strategy Management Framework, Cloud Policy, Key Driver for Adoption, Risk Management, IT Capacity and Utilization, Demand and Capacity matching, Demand Queueing, Change Management, Cloud Service Architecture		
UNIT – III	CLOUD SERVICE MANAGEMENT	6
Cloud Service Reference Model, Cloud Service LifeCycle, Basics of Cloud Service Design, Dealing with Legacy Systems and Services, Benchmarking of Cloud Services, Cloud Service Capacity Planning, Cloud Service Deployment and Migration, Cloud Marketplace, Cloud Service Operations Management		
UNIT – IV	CLOUD SERVICE ECONOMICS	6
Pricing models for Cloud Services, Freemium, Pay Per Reservation, Pay per User, Subscription based Charging, Procurement of Cloud-based Services, Capex vs Opex Shift, Cloud service Charging, Cloud Cost Models		
UNIT – V	CLOUD SERVICE GOVERNANCE & VALUE	6
IT Governance Definition, Cloud Governance Definition, Cloud Governance Framework, Cloud Governance Structure, Cloud Governance Considerations, Cloud Service Model Risk Matrix, Understanding Value of Cloud Services, Measuring the value of Cloud Services, Balanced Scorecard, Total Cost of Ownership		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1.Create a Cloud Organization in AWS/Google Cloud/or any equivalent Open Source cloud softwares like Openstack, Eucalyptus, OpenNebula with Role-based access control	
2. Create a Cost-model for a web application using various services and do Cost-benefit Analysis	
3. Create alerts for usage of Cloud resources	
4. Create Billing alerts for your Cloud Organization	
5. Compare Cloud cost for a simple web application across AWS, Azure and GCP and suggest the best one	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Exhibit cloud-design skills to build and automate business solutions using cloud technologies.
CO2:	Possess Strong theoretical foundation leading to excellence and excitement towards adoption of cloud-based services
CO3:	Solve the real world problems using Cloud services and technologies

HoD/BOS Chairman

Subject Code	Subject Name	Category	L	T	P	C
CCS2415	DATA WAREHOUSING	PEC	2	0	2	3

Course Objectives:

- To know the details of data warehouse Architecture
- To understand the OLAP Technology
- To understand the partitioning strategy
- To differentiate various schema
- To understand the roles of process manager & system manager

UNIT – I	INTRODUCTION TO DATA WAREHOUSE	5
Data warehouse Introduction - Data warehouse components- operational database Vs data warehouse – Data warehouse Architecture – Three-tier Data Warehouse Architecture - Autonomous Data Warehouse- Autonomous Data Warehouse Vs Snowflake - Modern Data Warehouse.		
UNIT – II	ETL AND OLAP TECHNOLOGY	6
What is ETL – ETL Vs ELT – Types of Data warehouses - Data warehouse Design and Modeling - Delivery Process - Online Analytical Processing (OLAP) - Characteristics of OLAP - Online Transaction Processing (OLTP) Vs OLAP - OLAP operations- Types of OLAP- ROLAP Vs MOLAP Vs HOLAP.		
UNIT – III	META DATA, DATA MART AND PARTITION STRATEGY	7

HoD/BOS Chairman

Principal

Meta Data – Categories of Metadata – Role of Metadata – Metadata Repository – Challenges for Meta Management - Data Mart – Need of Data Mart- Cost Effective Data Mart- Designing Data Marts- Cost of Data Marts- Partitioning Strategy – Vertical partition – Normalization – Row Splitting – Horizontal Partition.		
UNIT – IV	DIMENSIONAL MODELING AND SCHEMA	6
Dimensional Modeling- Multi-Dimensional Data Modeling – Data Cube- Star Schema- Snowflake schema- Star Vs Snowflake schema- Fact constellation Schema- Schema Definition - Process Architecture- Types of Data Base Parallelism – Datawarehouse Tools.		
UNIT – V	SYSTEM & PROCESS MANAGERS	6
Data Warehousing System Managers: System Configuration Manager- System Scheduling Manager - System Event Manager - System Database Manager - System Backup Recovery Manager - Data Warehousing Process Managers: Load Manager – Warehouse Manager- Query Manager – Tuning – Testing.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Data exploration and integration with WEKA	
2. Apply weka tool for data validation	
3. Plan the architecture for real time application	
4. Write the query for schema definition	
5. Design data ware house for real time applications	
6. Analyse the dimensional Modeling	
7. Case study using OLAP	
8. Case study using OTLP	
9. Implementation of warehouse testing.	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Design data warehouse architecture for various Problems
CO2:	Apply the OLAP Technology
CO3:	Analyse the partitioning strategy
CO4:	Critically analyze the differentiation of various schema for given problem
CO5:	Frame roles of process manager & system manager

Text Books:	
1.	Alex Berson and Stephen J. Smith “Data Warehousing, Data Mining & OLAP”, Tata McGraw – Hill Edition, Thirteenth Reprint 2008.
2.	Ralph Kimball, “The Data Warehouse Toolkit: The Complete Guide to Dimensional Modeling”, Third edition, 2013.

Reference Books/Other Materials/WebResources:	
1.	Paul Raj Ponniah, “Data warehousing fundamentals for IT Professionals”, 2012.
2.	K.P. Soman, ShyamDiwakar and V. Ajay “Insight into Data mining Theory and Practice”,Easter Economy Edition, Prentice Hall of India, 2006.

Subject Code	Subject Name	Category	L	T	P	C
CCS2416	STORAGE TECHNOLOGIES	PCC	2	0	2	3
Course Objectives:						
Characterize the functionalities of logical and physical components of storage.						
Describe various storage networking technologies.						
Identify different storage virtualization technologies.						
Discuss the different backup and recovery strategies.						
Understand common storage management activities and solutions.						

UNIT – I	STORAGE SYSTEMS	6
Introduction to Information Storage: Digital data and its types, Information storage, Key characteristics of data center and Evolution of computing platforms. Information Lifecycle Management. Third Platform Technologies: Cloud computing and its essential characteristics, Cloud services and cloud deployment models, Big data analytics, Social networking and mobile computing, Characteristics of third platform infrastructure and Imperatives for third platform transformation. Data Center Environment: Building blocks of a data center, Compute systems and compute virtualization and Software-defined data center.		
UNIT – II	INTELLIGENT STORAGE SYSTEMS AND RAID	6
Components of an intelligent storage system, Components, addressing, and performance of hard disk drives and solid-state drives, RAID, Types of intelligent storage systems, Scale-up and scale out storage Architecture.		
UNIT – III	STORAGE NETWORKING TECHNOLOGIES AND VIRTUALIZATION	6
Block-Based Storage System, File-Based Storage System, Object-Based and Unified Storage. Fibre Channel SAN: Software-defined networking, FC SAN components and architecture, FC SAN topologies, link aggregation, and zoning, Virtualization in FC SAN environment. Internet Protocol SAN: iSCSI protocol, network components, and connectivity, Link aggregation, switch aggregation, and VLAN, FCIP protocol, connectivity, and configuration. Fibre Channel over Ethernet SAN: Components of FCoE SAN, FCoE SAN connectivity, Converged Enhanced Ethernet, FCoE architecture.		
UNIT – IV	BACKUP, ARCHIVE AND REPLICATION	6
Introduction to Business Continuity, Backup architecture, Backup targets and methods, Data deduplication, Cloud-based and mobile device backup, Data archive, Uses of replication and its		

HoD/BOS Chairman

Principal

characteristics, Compute based, storage-based, and network-based replication, Data migration, Disaster Recovery as a Service (DRaaS).

UNIT – V	SECURING STORAGE INFRASTRUCTURE	6
Information security goals, Storage security domains, Threats to a storage infrastructure, Security controls to protect a storage infrastructure, Governance, risk, and compliance, Storage infrastructure management functions, Storage infrastructure management processes.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Creation and Management of Basic Storage Partitions and File Systems.	
2. Implement Software RAID Levels and Verification of RAID Functionality.	
3. Configuration of Logical Volume Management (LVM) for Storage Virtualization.	
4. Setup and Testing of iSCSI Target and Initiator for Network-Based Storage.	
5. Execution of Backup and Restore Operations Using Tar, Rsync, and Snapshots.	
6. Implement Storage Security Using Disk Encryption and Access Controls.	
	Total Contact Hours : 30

Course Outcomes:	After the successful completion of this course, the student will be able to
CO1:	Demonstrate the fundamentals of information storage management and various models of Cloud infrastructure services and deployment.
CO2:	Illustrate the usage of advanced intelligent storage systems and RAID
CO3:	Interpret various storage networking architectures - SAN, including storage subsystems and virtualization
CO4:	Examine the different role in providing disaster recovery and remote replication technologies.
CO5:	Infer the security needs and security measures to be employed in information storage management.

Textbooks:	
1.	EMC Corporation, Information Storage and Management, Wiley, India.
2.	Jon Tate, Pall Beck, Hector Hugo Ibarra, Shanmuganathan Kumaravel and Libor Miklas, Introduction to Storage Area Networks, Ninth Edition, IBM - Redbooks, December 2017.
3.	Ulf Troppens, Rainer Erkens, Wolfgang Mueller-Friedt, Rainer Wolafka, Nils Haustein, Storage Networks Explained, Second Edition, Wiley, 2009

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
CCS2417	SOFTWARE DEFINED NETWORKS	PEC	2	0	2	3
Course Objectives:						
To understand the need for SDN and its data plane operations						
To understand the functions of control plane						
To comprehend the migration of networking functions to SDN environment						
To explore various techniques of network function virtualization						
To comprehend the concepts behind network virtualization						

UNIT – I	SDN: INTRODUCTION	6
Evolving Network Requirements – The SDN Approach – SDN architecture - SDN Data Plane , Control plane and Application Plane		
UNIT – II	SDN DATA PLANE AND CONTROL PLANE	6
Data Plane functions and protocols - OpenFlow Protocol - Flow Table - Control Plane Functions - Southbound Interface, Northbound Interface – SDN Controllers - Ryu, OpenDaylight, ONOS - Distributed Controllers		
UNIT – III	SDN APPLICATIONS	6
SDN Application Plane Architecture – Network Services Abstraction Layer – Traffic Engineering – Measurement and Monitoring – Security – Data Center Networking		
UNIT – IV	NETWORK FUNCTION VIRTUALIZATION	6
Network Virtualization - Virtual LANs – OpenFlow VLAN Support - NFV Concepts – Benefits and Requirements – Reference Architecture		
UNIT – V	NFV FUNCTIONALITY	6
NFV Infrastructure – Virtualized Network Functions – NFV Management and Orchestration – NFV Use cases – SDN and NFV		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1.Setup your own virtual SDN lab i) Virtualbox/Mininet Environment for SDN - http://mininet.org ii) https://www.kathara.org iii) GNS3	
2.Create a simple mininet topology with SDN controller and use Wireshark to capture and visualize the OpenFlow messages such as OpenFlow FLOW MOD, PACKET IN, PACKET OUT etc.	
3. Create a SDN application that uses the Northbound API to program flow table rules on the switch for various use cases like L2 learning switch, Traffic Engineering, Firewall etc.	
4.Create a simple end-to-end network service with two VNFs using vim-emu	
5. Install OSM and onboard and orchestrate network service.	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Describe the motivation behind SDN

HoD/BOS Chairman

Principal

CO2:	Identify the functions of the data plane and control plane
CO3:	Design and develop network applications using SDN
CO4:	Orchestrate network services using NFV
CO5:	Explain various use cases of SDN and NFV

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2418	SECURITY AND PRIVACY IN CLOUD	PEC	2	0	2	3

Course Objectives:						
To Introduce Cloud Computing terminology, definition & concepts						
To understand the security design and architectural considerations for Cloud						
To understand the Identity, Access control in Cloud						
To follow best practices for Cloud security using various design patterns						
To be able to monitor and audit cloud applications for security						

UNIT – I	FUNDAMENTALS OF CLOUD SECURITY CONCEPTS	7
Overview of cloud security- Security Services - Confidentiality, Integrity, Authentication, Non repudiation, Access Control - Basic of cryptography - Conventional and public-key cryptography, hash functions, authentication, and digital signatures.		
UNIT – II	SECURITY DESIGN AND ARCHITECTURE FOR CLOUD	6

HoD/BOS Chairman

Principal

Security design principles for Cloud Computing - Comprehensive data protection - End-to-end access control - Common attack vectors and threats - Network and Storage - Secure Isolation Strategies - Virtualization strategies - Inter-tenant network segmentation strategies - Data Protection strategies: Data retention, deletion and archiving procedures for tenant data, Encryption, Data Redaction, Tokenization, Obfuscation, PKI and Key.		
UNIT – III	ACCESS CONTROL AND IDENTITY MANAGEMENT	6
Access control requirements for Cloud infrastructure - User Identification - Authentication and Authorization - Roles-based Access Control - Multi-factor authentication - Single Sign-on, Identity Federation - Identity providers and service consumers - Storage and network access control options - OS Hardening and minimization - Verified and measured boot - Intruder Detection and prevention.		
UNIT – IV	CLOUD SECURITY DESIGN PATTERNS	6
Introduction to Design Patterns, Cloud bursting, Geo-tagging, Secure Cloud Interfaces, Cloud Resource Access Control, Secure On-Premise Internet Access, Secure External Cloud.		
UNIT – V	MONITORING, AUDITING AND MANAGEMENT	5
Proactive activity monitoring - Incident Response, Monitoring for unauthorized access, malicious traffic, abuse of system privileges - Events and alerts - Auditing – Record generation, Reporting and Management, Tamper-proofing audit logs, Quality of Services, Secure Management, User management, Identity management, Security Information and Event Management.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Simulate a cloud scenario using Cloud Sim and run a scheduling algorithm not present in Cloud Sim	
2. Simulate resource management using cloud sim	
3. Simulate log forensics using cloud sim	
4. Simulate a secure file sharing using a cloud sim	
5. Implement data anonymization techniques over the simple dataset (masking, kanonymization, etc)	
6. Implement any encryption algorithm to protect the images	
7. Implement any image obfuscation mechanism	
8. Implement a role-based access control mechanism in a specific scenario	
9. Implement an attribute-based access control mechanism based on a particular scenario	
10. Develop a log monitoring system with incident management in the cloud	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the cloud concepts and fundamentals.
CO2:	Explain the security challenges in the cloud.
CO3:	Define cloud policy and Identity and Access Management
CO4:	Understand various risks and audit and monitoring mechanisms in the cloud.
CO5:	Define the various architectural and design considerations for security in the cloud.

Textbooks:	
1.	Raj Kumar Buyya , James Broberg, andrzejGoscinski, “Cloud Computing:l, Wiley 2013
2.	Dave shackleford, “Virtualization Securityll, SYBEX a wiley Brand 2013.
3.	Mather, Kumaraswamy and Latif, “Cloud Security and Privacyll, OREILLY 2011

PROFESSIONAL ELECTIVE COURSES:VERTICAL-IV

Subject Code	Subject Name	Category	L	T	P	C
CCS2419	ETHICAL HACKING	PEC	2	0	2	3

Course Objectives:

- To understand the basics of computer based vulnerabilities.
- To explore different foot printing, reconnaissance and scanning methods
- To expose the enumeration and vulnerability analysis methods.
- To understand hacking options available in Web and wireless applications.
- To explore the options for network protection.
- To practice tools to perform ethical hacking to expose the vulnerabilities.

UNIT – I	INTRODUCTION	6
Ethical Hacking Overview - Role of Security and Penetration Testers .- Penetration-Testing Methodologies- Laws of the Land - Overview of TCP/IP- The Application Layer - The Transport Layer - The Internet Layer - IP Addressing .- Network and Computer Attacks - Malware - Protecting Against Malware Attacks.- Intruder Attacks - Addressing Physical Security		
UNIT – II	FOOT PRINTING, RECONNAISSANCE AND SCANNING NETWORKS	6
Foot printing Concepts – Foot printing through Search Engines, Web Services, Social Networking Sites, Website, Email - Competitive Intelligence – Foot printing through Social Engineering - Foot printing Tools - Network Scanning Concepts - Port-Scanning Tools - Scanning Techniques - Scanning Beyond IDS and Firewall		
UNIT – III	ENUMERATION AND VULNERABILITY ANALYSIS	6
Enumeration Concepts - NetBIOS Enumeration – SNMP, LDAP, NTP, SMTP and DNS Enumeration - Vulnerability Assessment Concepts - Desktop and Server OS Vulnerabilities - Windows OS Vulnerabilities - Tools for Identifying Vulnerabilities in Windows- Linux OS		

HoD/BOS Chairman

Principal

Vulnerabilities- Vulnerabilities of Embedded Oss		
UNIT – IV	SYSTEM HACKING	6
Hacking Web Servers - Web Application Components- Vulnerabilities - Tools for Web Attackers and Security Testers Hacking Wireless Networks - Components of a Wireless Network – Ward riving- Wireless Hacking - Tools of the Trade		
UNIT – V	NETWORK PROTECTION SYSTEMS	6
Access Control Lists. - Cisco Adaptive Security Appliance Firewall - Configuration and Risk Analysis Tools for Firewalls and Routers - Intrusion Detection and Prevention Systems - Network-Based and Host-Based IDSs and IPSs - Web Filtering - Security Incident Response Teams – Honey pots.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Install Kali or Backtrack Linux / Metasploitable/ Windows XP	
2. Practice the basics of reconnaissance.	
3. Using FOCA / SearchDiggity tools, extract metadata and expanding the target list.	
4. Aggregates information from public databases using online free tools like Paterva’s Maltego.	
5. Information gathering using tools like Robtex.	
6. Scan the target using tools like Nessus.	
7. View and capture network traffic using Wireshark.	
8. Automate dig for vulnerabilities and match exploits using Armitage	
FOCA : http://www.informatica64.com/foca.aspx . Nessus : http://www.tenable.com/products/nessus . Wireshark : http://www.wireshark.org . Armitage : http://www.fastandeasyhacking.com/ . Kali or Backtrack Linux, Metasploitable, Windows XP	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	To express knowledge on basics of computer based vulnerabilities
CO2:	To gain understanding on different foot printing, reconnaissance and scanning methods.
CO3:	To demonstrate the enumeration and vulnerability analysis methods
CO4:	To gain knowledge on hacking options available in Web and wireless applications.
CO5:	To acquire knowledge on the options for network protection.
CO6:	To use tools to perform ethical hacking to expose the vulnerabilities.

Textbooks:	
1.	Michael T. Simpson, Kent Backman, and James E. Corley, Hands-On Ethical Hacking and Network Defense, Course Technology, Delmar Cengage Learning, 2010.
2.	The Basics of Hacking and Penetration Testing - Patrick Engebretson, SYNGRESS, Elsevier, 2013.
3.	The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws, Dafydd Stuttard and Marcus Pinto, 2011.

Reference Books/Other Materials/Web Resources:	
1.	Black Hat Python: Python Programming for Hackers and Pentesters, Justin Seitz , 2014.

Subject Code	Subject Name	Category	L	T	P	C
CCS2420	DIGITAL AND MOBILE FORENSICS	PEC	2	0	2	3

Course Objectives:						
• To understand basic digital forensics and techniques.						
• To understand digital crime and investigation						
• To understand how to be prepared for digital forensic readiness						
• To understand and use forensics tools for iOS devices.						
• To understand and use forensics tools for Android devices.						

UNIT – I	INTRODUCTION TO DIGITAL FORENSICS	6
Forensic Science – Digital Forensics – Digital Evidence – The Digital Forensics Process – Introduction – The Identification Phase – The Collection Phase – The Examination Phase – The Analysis Phase – The Presentation Phase		
UNIT – II	DIGITAL CRIME AND INVESTIGATION	6
Digital Crime – Substantive Criminal Law – General Conditions – Offenses – Investigation Methods for Collecting Digital Evidence – International Cooperation to Collect Digital Evidence		
UNIT – III	DIGITAL FORENSIC READINESS	6

HoD/BOS Chairman

Principal

Introduction – Law Enforcement versus Enterprise Digital Forensic Readiness – Rationale for Digital Forensic Readiness – Frameworks, Standards and Methodologies – Enterprise Digital Forensic Readiness – Challenges in Digital Forensics		
UNIT – IV	iOS FORENSICS	6
Mobile Hardware and Operating Systems - iOS Fundamentals – Jailbreaking – File System – Hardware – iPhone Security – iOS Forensics – Procedures and Processes – Tools – Oxygen Forensics – MobilEdit – iCloud		
UNIT – V	ANDROID FORENSICS	6
Android basics – Key Codes – ADB – Rooting Android – Boot Process – File Systems – Security – Tools – Android Forensics – Forensic Procedures – ADB – Android Only Tools – Dual Use Tools – Oxygen Forensics – MobilEdit – Android App Decompiling		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Installation of Sleuth Kit on Linux. List all data blocks. Analyze allocated as well as unallocated blocks of a disk image.	
2. Data extraction from call logs using Sleuth Kit.	
3. Data extraction from SMS and contacts using Sleuth Kit.	
4. Install Mobile Verification Toolkit or MVT and decrypt encrypted iOS backups.	
5. Process and parse records from the iOS system.	
6. Extract installed applications from Android devices.	
7. Extract diagnostic information from Android devices through the adb protocol.	
8. Generate a unified chronological timeline of extracted records.	
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Have knowledge on digital forensics
CO2:	Know about digital crime and investigations.
CO3:	Be forensic ready
CO4:	Investigate, identify and extract digital evidence from iOS devices
CO5:	Investigate, identify and extract digital evidence from Android devices

Textbooks:	
1.	Andre Arnes, “Digital Forensics”, Wiley, 2018.

Subject Code	Subject Name	Category	L	T	P	C
CCS2421	SOCIAL NETWORK SECURITY	PEC	2	0	2	3
Course Objectives:						
To develop semantic web related simple applications						
To explain Privacy and Security issues in Social Networking						
To explain the data extraction and mining of social networks						
To discuss the prediction of human behaviour in social communities						
To describe the Access Control, Privacy and Security management of social networks						

UNIT – I	FUNDAMENTALS OF SOCIAL NETWORKING	6
Introduction to Semantic Web, Limitations of current Web, Development of Semantic Web, Emergence of the Social Web, Social Network analysis, Development of Social Network Analysis, Key concepts and measures in network analysis, Historical overview of privacy and security, Major paradigms, for understanding privacy and security		
UNIT – II	SECURITY ISSUES IN SOCIAL NETWORKS	6
The evolution of privacy and security concerns with networked technologies, Contextual influences on privacy attitudes and behaviours, Anonymity in a networked world		
UNIT – III	EXTRACTION AND MINING IN SOCIAL NETWORKING DATA	6
Extracting evolution of Web Community from a Series of Web Archive, Detecting communities in social networks, Definition of community, Evaluating communities, Methods for community detection and mining, Applications of community mining algorithms, Tools for detecting communities social network infrastructures and communities, Big data and Privacy		
UNIT – IV	PREDICTING HUMAN BEHAVIOR AND PRIVACY ISSUES	6
Understanding and predicting human behaviour for social communities, User data Management, Inference and Distribution, Enabling new human experiences, Reality mining, Context, Awareness, Privacy in online social networks, Trust in online environment, What is Neo4j, Nodes, Relationships, Properties.		
UNIT – V	ACCESS CONTROL, PRIVACY AND IDENTITY MANAGEMENT	6
Understand the access control requirements for Social Network, Enforcing Access Control Strategies, Authentication and Authorization, Roles-based Access Control, Host, storage and network access control options, Firewalls, Authentication, and Authorization in Social Network, Identity & Access Management, Single Sign-on, Identity Federation, Identity providers and service consumers, The role of Identity provisioning		
		Total Contact Hours :30

HoD/BOS Chairman

Principal

LIST OF EXPERIMENTS	
1. Design own social media application	
2. Create a Network model using Neo4j	
3. Read and write Data from Graph Database	
4. Find “Friend of Friends” using Neo4j	
5. Implement secure search in social media	
6. Create a simple Security & Privacy detector	
	Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Develop semantic web related simple applications
CO2:	Address Privacy and Security issues in Social Networking
CO3:	Explain the data extraction and mining of social networks
CO4:	Discuss the prediction of human behaviour in social communities
CO5:	Describe the applications of social networks

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2422	Modern Cryptography	PEC	2	0	2	3
Course Objectives:						
To learn about Modern Cryptography.						
To focus on how cryptographic algorithms and protocols work and how to use them.						
To build a Pseudo random permutation.						
To construct Basic cryptanalytic techniques.						
To provide instruction on how to use the concepts of block ciphers and message authentication codes.						

UNIT – I	INTRODUCTION	6
Basics of Symmetric Key Cryptography, Basics of Asymmetric Key Cryptography, Hardness of Functions. Notions of Semantic Security (SS) and Message In distinguish ability (MI): Proof of Equivalence of SS and MI, Hard Core Predicate, Trap-door permutation, Gold was ser-Micali Encryption. Gold reich-Levin Theorem: Relation between Hardcore Predicates and Trap-door permutations.		
UNIT – II	FORMAL NOTIONS OF ATTACKS	6
Attacks under Message In distinguish ability: Chosen Plaintext Attack (IND-CPA), Chosen Cipher text Attacks (IND-CCA1 and IND-CCA2), Attacks under Message Non-malleability: NM-CPA and NM-CCA2, Inter-relations among the attack model .		
UNIT – III	RANDOM ORACLES	6
Provable Security and asymmetric cryptography, hash functions. One-way functions: Weak and Strong one-way functions. Pseudo-random Generators (PRG): Blum-Micali-Yao Construction, Construction of more powerful PRG, Relation between One-way functions and PRG, Pseudorandom Functions (PRF) .		
UNIT – IV	BUILDING A PSEUDORANDOM PERMUTATION	6
The Luby Rack off Construction: Formal Definition, Application of the Luby Rack off Construction to the construction of Block Ciphers, The DES in the light of Luby Rack off Construction.		
UNIT – V	MESSAGE AUTHENTICATION CODES	6
Left or Right Security (LOR). Formal Definition of Weak and Strong MACs, Using a PRF as a MAC, Variable length MAC. Public Key Signature Schemes: Formal Definitions, Signing and Verification, Formal Proofs of Security of Full Domain Hashing. Assumptions for Public Key Signature Schemes: One-way functions Imply Secure One-time Signatures. Shamir's Secret Sharing Scheme. Formally Analyzing Cryptographic Protocols. Zero Knowledge Proofs and Protocols.		
		Total Contact Hours :30

HoD/BOS Chairman

Principal

LIST OF EXPERIMENTS	
1. Implement Feige-Fiat-Shamir identification protocol.	
2. Implement GQ identification protocol.	
3. Implement Schnorr identification protocol.	
4. Implement Rabin one-time signature scheme.	
5. Implement Merkle one-time signature scheme.	
6. Implement Authentication trees and one-time signatures.	
7. Implement GMR one-time signature scheme.	
	Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Interpret the basic principles of cryptography and general cryptanalysis.
CO2:	Determine the concepts of symmetric encryption and authentication.
CO3:	Identify the use of public key encryption, digital signatures, and key establishment.
CO4:	Articulate the cryptographic algorithms to compose, build and analyze simple cryptographic solutions.
CO5:	Express the use of Message Authentication Codes.

Textbooks:	
1.	Hans Delfs and Helmut Knebl, Introduction to Cryptography: Principles and Applications, Springer Verlag.
2.	Wenbo Mao, Modern Cryptography, Theory and Practice, Pearson Education (Low Priced Edition)

Subject Code	Subject Name	Category	L	T	P	C
CCS2440	Malware Analysis	PEC	2	0	2	3

Course Objectives:						
To introduce the fundamentals of malware, types and its effects						
To enable to identify and analyse various malware types by static analysis						
To enable to identify and analyse various malware types by dynamic analysis						
To construct Basic cryptanalytic techniques.						
To deal with detection, analysis, understanding, controlling, and eradication of malware						

UNIT – I	INTRODUCTION AND BASIC ANALYSIS	6
Goals of Malware Analysis, AV Scanning, Hashing, Finding Strings, Packing and Obfuscation, PE file format, Static, Linked Libraries and Functions, Static Analysis tools, Virtual Machines and their usage in malware analysis, Sandboxing, Basic dynamic analysis, Malware execution, Process Monitoring, Viewing processes, Registry snapshots.		
UNIT – II	ADVANCED STATIC ANALYSIS	7
The Stack, Conditionals, Branching, Rep Instructions, Disassembly, Global and local variables, Arithmetic operations, Loops, Function Call Conventions, C Main Method and Offsets. Portable Executable File Format, The PE File Headers and Sections, IDA Pro, Function analysis, Graphing, The Structure of a Virtual Machine, Analyzing Windows programs, Anti-static analysis techniques, obfuscation, packing, metamorphism, polymorphism.		
UNIT – III	ADVANCED DYNAMIC ANALYSIS	7
Live malware analysis, dead malware analysis, analyzing traces of malware, system calls, api calls, registries, network activities. Anti-dynamic analysis techniques, VM detection techniques, Evasion techniques, , Malware Sandbox, Monitoring with Process Monitor, Packet Sniffing with Wireshark, Kernel vs. User-Mode Debugging, OllyDbg, Breakpoints, Tracing, Exception Handling, Patching		
UNIT – IV	MALWARE FUNCTIONALITY	5
Downloaders and Launchers, Backdoors, Credential Stealers, Persistence Mechanisms, Handles, Mutexes, Privilege Escalation, Covert malware launching-		

HoD/BOS Chairman

Principal

Launchers, Process Injection, Process Replacement, Hook Injection, Detours, APC injection.		
UNIT – V	ANDROID MALWARE ANALYSIS	5
Android Malware Analysis: Android architecture, App development cycle, APKTool, APKInspector, Dex2Jar, JD-GUI, Static and Dynamic Analysis, Case studies.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Experimentation on Initial Infection Vectors and Malware Discovery	
2. Implementation on Sandboxing Malware and Gathering Information From Runtime Analysis	
3. Implementation on Portable Executable (PE32) File Format.	
4. Implementation on Executable Metadata and Executable Packers	
5. Experimentation on Malware Self - Defense, Compression, and Obfuscation Techniques	
6. Experimentation on Malware behaviour analysis	
7. Experimentation on analyzing Malicious Microsoft Office and Adobe PDF Documents	
8. Experimentation on Mobile malware analysis	
9. Experimentation on Packing and Unpacking of malware	
10. Experimentation on Root kit Anti Forensics and Covert Channels	
11. Experimentation on Modern Root kit Analysis	
12. Experimentation on Malware traffic analysis	
Implement of real time applications for the following malware analysis	
Implement of real time applications for the following malware analysis	
Dynamic analysis of malwares.	
Classification of malwares based on their behavior.	
Usage of tools to classify malware	
Advanced malware analysis	
Android malware analysis	
Applying antivirus tools in various applications	
Malware report documentation	
	Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the various concepts of malware analysis and their technologies used.
CO2:	Possess the skills necessary to carry out independent analysis of modern malware samples using both static and dynamic analysis techniques
CO3:	Understand the methods and techniques used by professional malware analysts
CO4:	To be able to safely analyze, debug, and assemble any malicious software by malware analysis

HoD/BOS Chairman

Principal

CO5:	Understand the concept of Android malware analysis their architecture ,and App development

Subject Code	Subject Name	Category	L	T	P	C
CCS2433	QUANTUM COMPUTING	PEC	2	0	2	3
Course Objectives:						
To know the background of classical computing and quantum computing.						
To learn the fundamental concepts behind quantum computation.						
To study the details of quantum mechanics and its relation to Computer Science.						
To gain knowledge about the basic hardware and mathematical models of quantum computation.						
To learn the basics of quantum information and the theory behind it.						
UNIT – I	QUANTUM COMPUTING BASIC CONCEPTS					6
Complex Numbers - Linear Algebra - Matrices and Operators - Global Perspectives Postulates of Quantum Mechanics – Quantum Bits - Representations of Qubits - Superpositions						
UNIT – II	QUANTUM GATES AND CIRCUITS					5
Universal logic gates - Basic single qubit gates - Multiple qubit gates - Circuit development - Quantum error correction.						
UNIT – III	QUANTUM ALGORITHMS					7
Quantum parallelism - Deutsch’s algorithm - The Deutsch–Jozsa algorithm - Quantum Fourier transform and its applications - Quantum Search Algorithms: Grover’s Algorithm						
UNIT – IV	QUANTUM INFORMATION THEORY					6
Data compression - Shannon’s noiseless channel coding theorem - Schumacher’s quantum noiseless channel coding theorem - Classical information over noisy quantum channels						
UNIT – V	QUANTUM CRYPTOGRAPHY					6
Classical cryptography basic concepts - Private key cryptography - Shor’s Factoring Algorithm - Quantum Key Distribution - BB84 - Ekart 91						
		Total Contact Hours :30				

LIST OF EXPERIMENTS
1. Single qubit gate simulation - Quantum Composer
2. Multiple qubit gate simulation - Quantum Composer
3. Composing simple quantum circuits with q-gates and measuring the output into classical bits.
4. IBM Qiskit Platform Introduction
5. Implementation of Shor's Algorithms
6. Implementation of Grover's Algorithm
7. Implementation of Deutsch's Algorithm
8. Implementation of Deutsch-Jozsa's Algorithm
9. Integer factorization using Shor's Algorithm
10. QKD Simulation

HoD/BOS Chairman

Principal

11. Mini Project such as implementing an API for efficient search using Grover's Algorithms

Total Contact Hours :30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the basics of quantum computing.
CO2:	Understand the background of Quantum Mechanics.
CO3:	Analyze the computation models.
CO4:	Model the circuits using quantum computation. environments and frameworks.
CO5:	Understand the quantum operations such as noise and error–correction.

Subject Code	Subject Name	Category	L	T	P	C
CCS2446	NETWORK SECURITY	PEC	2	0	2	3
Course Objectives:						
• To learn the fundamentals of cryptography.						
• To learn the key management techniques and authentication approaches.						
• To explore the network and transport layer security techniques.						
• To understand the application layer security standards.						
• To learn the real time security practices.						

UNIT – I	INTRODUCTION	8
Basics of cryptography, conventional and public-key cryptography, hash functions, authentication, and digital signatures.		
UNIT – II	KEY MANAGEMENT AND AUTHENTICATION	7
Key Management and Distribution: Symmetric Key Distribution, Distribution of Public Keys, X.509 Certificates, Public-Key Infrastructure. User Authentication: Remote User-Authentication Principles, Remote User-Authentication Using Symmetric Encryption, Kerberos Systems, Remote User Authentication Using Asymmetric Encryption.		
UNIT – III	ACCESS CONTROL AND SECURITY	4
Network Access Control: Network Access Control, Extensible Authentication Protocol, IEEE 802.1X Port-Based Network Access Control - IP Security - Internet Key Exchange (IKE). Transport-Level Security: Web Security Considerations, Secure Sockets Layer, Transport Layer Security, HTTPS standard, Secure Shell (SSH) application.		
UNIT – IV	APPLICATION LAYER SECURITY	5
Electronic Mail Security: Pretty Good Privacy, S/MIME, Domain Keys Identified Mail. Wireless Network Security: Mobile Device Security.		
UNIT – V	SECURITY PRACTICES	6
Firewalls and Intrusion Detection Systems: Intrusion Detection Password Management, Firewall Characteristics Types of Firewalls, Firewall Basing, Firewall Location and Configurations. Blockchains, Cloud Security and IoT security.		
		Total Contact Hours: 30

LIST OF EXPERIMENTS

1. Implement symmetric key algorithms
2. Implement asymmetric key algorithms and key exchange algorithms
3. Implement digital signature schemes
4. Installation of Wire shark, tcpdump and observe data transferred in client-server communication using UDP/TCP and identify the UDP/TCP datagram.
5. Check message integrity and confidentiality using SSL
6. Experiment Eavesdropping, Dictionary attacks, MITM attacks
7. Experiment with Sniff Traffic using ARP Poisoning

HoD/BOS Chairman

Principal

8. Demonstrate intrusion detection system using any tool.	
9. Explore network monitoring tools	
10. Study to configure Firewall, VPN	
	Total Contact Hours: 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Classify the encryption techniques
CO2:	Illustrate the key management technique and authentication.
CO3:	Evaluate the security techniques applied to network and transport layer
CO4:	Discuss the application layer security standards.
CO5:	Apply security practices for real time applications.

PROFESSIONAL ELECTIVE COURSES:VERTICAL-V

Subject Code	Subject Name	Category	L	T	P	C
CCS2425	MULTIMEDIA AND ANIMATION	PEC	2	0	2	3

Course Objectives:						
• To grasp the fundamental knowledge of Multimedia elements and systems.						
• To get familiar with Multimedia file formats and standards.						
• To learn the process of authoring multimedia presentations.						
• To learn the techniques of animation in 2D and 3D and for the mobile UI.						
• To explore different popular applications of multimedia.						

UNIT – I	INTRODUCTION TO MULTIMEDIA	6
Definitions, Elements, Multimedia Hardware and Software, Distributed multimedia systems, challenges: security, sharing / distribution, storage, retrieval, processing, computing. Multimedia metadata, Multimedia databases, Hypermedia, Multimedia Learning.		
UNIT – II	MULTIMEDIA FILE FORMATS AND STANDARDS	6
File formats – Text, Image file formats, Graphic and animation file formats, Digital audio and Video file formats, Color in image and video, Color Models. Multimedia data and file formats for the web.		
UNIT – III	MULTIMEDIA AUTHORIZING	6
Authoring metaphors, Tools Features and Types: Card and Page Based Tools, Icon and Object Based Tools, Time Based Tools, Cross Platform Authoring Tools, Editing Tools, Painting and Drawing Tools, 3D Modeling and Animation Tools, Image Editing Tools, audio Editing Tools, Digital Movie Tools, Creating interactive presentations, virtual learning, simulations.		
UNIT – IV	ANIMATION	6
Principles of animation: staging, squash and stretch, timing, onion skinning, secondary action, 2D, 2 ½ D, and 3D animation, Animation techniques: Key frame, Morphing, Inverse Kinematics, Hand Drawn, Character rigging, vector animation, stop motion, motion graphics, , Fluid Simulation, skeletal animation, skinning Virtual Reality, Augmented Reality.		
UNIT – V	MULTIMEDIA APPLICATIONS	6
Multimedia Big data computing, social networks, smart phones, surveillance, Analytics, Multimedia Cloud Computing, Multimedia streaming cloud, media on demand, security and forensics, Online social networking, multimedia ontology, Content based retrieval from digital libraries.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1.	Working with Image Editing tools: Install tools like GIMP/ InkScape / Krita / Pencil and perform editing operations: • Use different selection and transform tools to modify or improve an image. • Create logos and banners for home pages of websites.
2.	Working with Audio Editing tools: • Install tools like, Audacity / Ardour for audio editing, sound mixing and special effects like fade-in or fade-out etc., • Perform audio compression by choosing a proper codec.

3.	Working with Video Editing and conversion tools: Install tools like OpenShot / Cinelerra / HandBrake for editing video content. - Edit and mix video content, remove noise, create special effects, add captions. - Compress and convert video file format to other popular formats.
4.	Working with web/mobile authoring tools: Adapt / KompoZer/ BlueGriffon / BlueFish / Aptana Studio/ NetBeans /WordPress /Expression Web: - Design simple Home page with banners, logos, tables quick links etc., - Provide a search interface and simple navigation from the home page to the inside pages of the website. - Design Responsive web pages for use on both web and mobile interfaces.
5.	Working with Animation tools: Install tools like, Krita, Wick Editor, Blender: - Perform a simple 2D animation with sprites. - Perform simple 3D animation with keyframes, kinematics.
6.	Working with Mobile UI animation tools: Origami studio / Lottie / Framer etc.,
7.	Working with E-Learning authoring tools: Install tools like EdApp / Moovly / CourseLab/ IsEazy and CamStudio/Ampache, VideoLAN: - Demonstrate screen recording and further editing for e-learning content. - Create a simple E-Learning module for a topic of your choice.
8.	Creating VR and AR applications: Any affordable VR viewer like Google Cardboard and any development platform like Openspace 3D / ARCore etc. Note: all tools listed are open source. Usage of any proprietary tools in place of open source tools is not restricted.
Total Contact Hours :30	

Course Outcomes:	Upon completion of the course, students should be able to:
CO1:	Get the bigger picture of the context of Multimedia and its applications.
CO2:	Use the different types of media elements of different formats on content pages.
CO3:	Author 2D and 3D creative and interactive presentations for different target multimedia applications.
CO4:	Use different standard animation techniques for 2D, 2 1/2 D, 3D applications.
CO5:	Understand the complexity of multimedia applications in the context of cloud, security, bigdata streaming, social networking, CBIR etc.,

Subject Code	Subject Name	Category	L	T	P	C
CCS2426	VIDEO CREATION AND EDITING	PEC	2	0	2	3
Course Objectives:						
• To introduce the broad perspective of linear and nonlinear editing concepts.						
• To understand the concept of Storytelling styles.						
• To be familiar with audio and video recording. To apply different media tools.						
• To learn and understand the concepts of AVID XPRESS DV 4.						

HoD/BOS Chairman

Principal

UNIT – I	FUNDAMENTALS	6
Evolution of filmmaking - linear editing - non-linear digital video - Economy of Expression - risks associated with altering reality through editing.		
UNIT – II	STORYTELLING	6
Storytelling styles in a digital world through jump cuts, L-cuts, match cuts, cutaways, dissolves, split edits - Consumer and pro NLE systems - digitizing images - managing resolutions - mechanics of digital editing - pointer files - media management.		
UNIT – III	USING AUDIO AND VIDEO	6
Capturing digital and analog video importing audio putting video on exporting digital video to tape recording to CDs and VCDs.		
UNIT – IV	WORKING WITH FINAL CUT PRO	6
Working with clips and the Viewer - working with sequences, the Timeline, and the canvas - Basic Editing - Adding and Editing Testing Effects - Advanced Editing and Training Techniques - Working with Audio - Using Media Tools - Viewing and Setting Preferences.		
UNIT – V	WORKING WITH AVID XPRESS DV 4	6
Starting Projects and Working with Project Window - Using Basic Tools and Logging - Preparing to Record and Recording - Importing Files - Organizing with Bins - Viewing and Making Footage - Using Timeline and Working in Trim Mode - Working with Audio - Output Options.		
		Total Contact Hours :30

LIST OF EXPERIMENTS	
1. Write a Movie Synopsis (Individual/Team Writing).	
2. Present team stories in class.	
3. Script/Storyboard Writing (Individual Assignment).	
4. Pre-Production: Personnel, budgeting, scheduling, location scouting, casting, contracts & agreements.	
5. Production: Single camera production personnel & equipment, Documentary Production.	
6. Writing The Final Proposal: Overview, Media Treatments, Summary, Pitching.	
7. Write Documentary & Animation Treatment.	
8. Post-production: Editing, Sound design, Finishing.	
Total Contact Hours :30	

Course Outcomes	Upon completion of the course students should be able to:
CO1:	Compare the strengths and limitations of Nonlinear editing.
CO2:	Identify the infrastructure and significance of storytelling.
CO3:	Apply suitable methods for recording to CDs and VCDs.
CO4:	Address the core issues of advanced editing and training techniques.
CO5:	Design and develop projects using AVID XPRESS DV 4.

Subject Code	Subject Name	Category	L	T	P	C
CCS2439	GAME THEORY	PEC	2	0	2	3
Course Objectives:						
To introduce the student to the notion of a game, its solutions concepts, and other basic notions and tools of game theory, and the main applications for which they are appropriate, including electronic trading markets.						
To formalize the notion of strategic thinking and rational choice by using the tools of game theory, and to provide insights into using game theory in 41ode1ling applications.						
To draw the connections between game theory, computer science, and economics, especially emphasizing the computational issues.						
To introduce contemporary topics in the intersection of game theory, computer science, and economics.						
To apply game theory in searching, auctioning and trading.						

UNIT – I	INTRODUCTION	6
Introduction - Making rational choices: basics of Games - strategy - preferences - payoffs - Mathematical basics - Game theory - Rational Choice - Basic solution concepts - non-cooperative versus cooperative games - Basic computational issues - finding equilibria and learning in games -Typical application areas for game theory (e.g. Google's sponsored search, eBay auctions, electricity trading markets).		
UNIT – II	GAMES WITH PERFECT INFORMATION	6
Games with Perfect Information - Strategic games - prisoner's dilemma, matching pennies - Nash equilibria - mixed strategy equilibrium - zero-sum games.		
UNIT – III	GAMES WITH IMPERFECT INFORMATION	6
Games with Imperfect Information - Bayesian Games - Motivational Examples - General Definitions - Information aspects - Illustrations - Extensive Games with Imperfect - Information - Strategies - Nash Equilibrium - Repeated Games - The Prisoner's Dilemma - Bargaining.		

HoD/BOS Chairman

Principal

UNIT – IV	NON-COOPERATIVE GAME THEORY	6
Non-cooperative Game Theory - Self-interested agents - Games in normal form - Analyzing games: from optimality to equilibrium - Computing Solution Concepts of Normal - Form Games - Computing Nash equilibria of two-player, zero-sum games - Computing Nash equilibria of two-player, general- sum games - Identifying dominated strategies.		
UNIT – V	MECHANISM DESIGN	6
Aggregating Preferences - Social Choice - Formal Model -Voting - Existence of social functions - Ranking systems - Protocols for Strategic Agents: Mechanism Design - Mechanism design with unrestricted preferences.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS	
1. Prisoner's dilemma.	
2. Pure Strategy Nash Equilibrium.	
3. Extensive Form - Graphs and Trees, Game Trees.	
4. Strategic Form - Elimination of dominant strategy.	
5. Minimax theorem, Minimax strategies.	
6. Perfect information games: trees, players assigned to nodes, payoffs, backward Induction, subgame perfect equilibrium.	
7. Imperfect-information games - Mixed Strategy Nash Equilibrium - Finding mixed-strategy Nash equilibria for zero sum games, mixed versus behavioral strategies.	
8. Repeated Games.	
9. Bayesian Nash equilibrium.	
Total Contact Hours :30	

Course Outcomes	Upon completion the course students should be able to:
CO1:	Discuss the notion of a strategic game and equilibria and identify the characteristics of main applications of these concepts.
CO2:	Discuss the use of Nash Equilibrium for other problems.
CO3:	Identify key strategic aspects and based on these be able to connect them to appropriate game theoretic concepts given a real world situation.
CO4:	Identify some applications that need aspects of Bayesian Games.
CO5:	Implement a typical Virtual Business scenario using Game theory.

Subject Code	Subject Name	Category	L	T	P	C
CCS2427	DIGITAL MARKETING	PEC	2	0	2	3
Course Objectives:						
- The primary objective of this module is to examine and explore the role and importance of digital marketing in today's rapidly changing business environment. - It also focuses on how digital marketing can be utilized by organizations and how its effectiveness can be measured.						

UNIT – I	INTRODUCTION TO ONLINE MARKET	6
Online Market space- Digital Marketing Strategy- Components - Opportunities for building Brand Website - Planning and Creation - Content Marketing.		
UNIT – II	SEARCH ENGINE OPTIMISATION	6
Search Engine optimization - Keyword Strategy - SEO Strategy - SEO success factors - On-Page Techniques - Off-Page Techniques. Search Engine Marketing - How Search Engine works - SEM components - PPC advertising - Display Advertisement.		
UNIT – III	E- MAIL MARKETING	6
E- Mail Marketing - Types of E - Mail Marketing - Email Automation - Lead Generation - Integrating Email with Social Media and Mobile - Measuring and maximizing email campaign effectiveness. Mobile Marketing - Mobile Inventory/channels - Location based; Context based; Coupons and offers, Mobile Apps, Mobile Commerce, SMS Campaigns - Profiling and targeting.		
UNIT – IV	SOCIAL MEDIA MARKETING	6
Social Media Marketing - Social Media Channels - Leveraging Social media for brand conversations and buzz. Successful /benchmark Social media campaigns. Engagement Marketing - Building Customer relationships - Creating Loyalty drivers - Influencer Marketing.		
UNIT – V	DIGITAL TRANSFORMATION	6
Digital Transformation & Channel Attribution- Analytics- Ad-words, Email, Mobile, Social Media, Web Analytics - Changing your strategy based on analysis- Recent trends in Digital marketing.		

HoD/BOS Chairman

Principal

	Total Contact Hours : 30
--	---------------------------------

LISTOF EXPERIMENTS	
1. Subscribe to a weekly/quarterly newsletter and analyze how its content and structure aid with the branding of the company and how it aids its potential customer segments.	
2. Perform keyword search for a skincare hospital website based on search volume and competition using Google keyword planner tool.	
3. Demonstrate how to use the Google WebMasters Indexing API	
4. Discuss an interesting case study regarding how an insurance company manages leads.	
5. Discuss negative and positive impacts and ethical implications of using social media for political advertising.	
6. Discuss how Predictive analytics is impacting marketing automation.	
	Total Contact Hours : 30

Course Outcomes	Upon completion the course students should be able to:
CO1:	To examine and explore the role and importance of digital marketing in today's rapidly changing business environment..
CO2:	To focuses on how digital marketing can be utilized by organizations and how its effectiveness can be measured.
CO3:	To know the key elements of a digital marketing strategy.
CO4:	To study how the effectiveness of a digital marketing campaign can be measured
CO5:	To demonstrate advanced practical skills in common digital marketing tools such as SEO, SEM, Social media and Blogs.

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
CCS2428	MULTIMEDIA DATA COMPRESSION AND STORAGE	PEC	2	0	2	3

Course Objectives:						
- To understand the basics of compression techniques - To understand the categories of compression for text, image and video - To explore the modalities of text, image and video compression algorithms - To know about basics of consistency of data availability in storage devices - To understand the concepts of data streaming services						

UNIT – I	BASICS OF DATA COMPRESSION	6
Introduction - Lossless and Lossy Compression - Basics of Huffman coding - Arithmetic coding - Dictionary techniques - Context based compression - Applications.		
UNIT – II	IMAGE COMPRESSION	6
Lossless Image compression – JPEG-CALIC-JPEG LS-Prediction using conditional averages – Progressive Image Transmission – Lossless Image compression formats – Applications - Facsimile encoding		
UNIT – III	VIDEO COMPRESSION	6
Introduction – Motion Compensation – Video Signal Representation – H.261 – MPEG-1-MPEG-2- H.263.		
UNIT – IV	DATA PLACEMENT ON DISKS	6
Statistical placement on Disks – Striping on Disks – Replication Placement on Disks – Constraint allocation on Disks – Tertiary storage Devices – Continuous Placement on Hierarchical storage system – Statistical placement on Hierarchical storage systems – Constraint allocation on Hierarchical storage system.		
UNIT – V	DISK SCHEDULING METHODS	6
Scheduling methods for disk requests – Feasibility conditions of concurrent streams– Scheduling methods for request streams.		
		Total Contact Hours : 30

HoD/BOS Chairman

Principal

LISTOF EXPERIMENTS	
1. Construct Huffman codes for given symbol probabilities.	
2. Encode run lengths with fixed-length code.	
3. Lempel-Ziv algorithm for adaptive variable-length encoding	
4. Compress the given word using arithmetic coding based on the frequency of the letters.	
5. Write a shell script, which converts all images in the current directory in JPEG.	
6. Write a program to split images from a video without using any primitives.	
7. Create a photo album of a trip by applying appropriate image dimensions and format.	
8. Write the code for identifying the popularity of content retrieval from media server.	
9. Write the code for ensuring data availability in disks using strip based method.	
10. Program for scheduling requests for data streams.	
	Total Contact Hours : 30

Course Outcomes	Upon completion the course students should be able to:
CO1:	Understand the basics of text, Image and Video compression
CO2:	Understand the various compression algorithms for multimedia content.
CO3:	Explore the applications of various compression techniques.
CO4:	Explore knowledge on multimedia storage on disks.
CO5:	Understand scheduling methods for request streams.

Textbooks:	
1.	Khalid Sayood, Introduction to Data Compression, Morgan Kaufmann Series in Multimedia Information and Systems, 2018, 5th Edition.
2.	Philip K.C.Tse, Multimedia Information Storage and Retrieval: Techniques and Technologies, 2008

Subject Code	Subject Name	Category	L	T	P	C
CCS2429	GAME DEVELOPMENT	PEC	2	0	2	3
Course Objectives:						
• To know the basics of 2D and 3D graphics for game development.						
• To know the stages of game development.						
• To understand the basics of a game engine.						
• To survey the gaming development environment and tool kits.						
• To learn and develop simple games using Pygame environment						

UNIT – I	3D GRAPHICS FOR GAME DESIGN	6
Genres of Games, Basics of 2D and 3D Graphics for Game Avatar, Game Components – 2D and 3D Transformations – Projections – Color Models – Illumination and Shader Models – Animation – Controller Based Animation.		
UNIT – II	GAME DESIGN PRINCIPLES	6
Character Development, Storyboard Development for Gaming – Script Design – Script Narration, Game Balancing, Core Mechanics, Principles of Level Design – Proposals – Writing for Preproduction, Production and Post – Production.		
UNIT – III	GAME ENGINE DESIGN	6
Rendering Concept – Software Rendering – Hardware Rendering – Spatial Sorting Algorithms – Algorithms for Game Engine– Collision Detection – Game Logic – Game AI – Pathfinding.		
UNIT – IV	OVERVIEW OF GAMING PLATFORMS AND FRAMEWORKS	6
Pygame Game development – Unity – Unity Scripts – Mobile Gaming, Game Studio, Unity Single player and Multi-Player game.		
UNIT – V	GAME DEVELOPMENT USING PYGAME	6
Developing 2D and 3D interactive games using Pygame – Avatar Creation – 2D and 3D Graphics Programming – Incorporating music and sound – Asset Creations – Game Physics algorithms Development – Device Handling in Pygame – Overview of Isometric and Tile Based arcade Games – Puzzle Games.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Installation of a game engine, e.g., Unity, Unreal Engine, familiarization of the GUI. Conceptualize the theme for a 2D game.
2. Character design, sprites, movement and character control
3. Level design: design of the world in the form of tiles along with interactive and collectible objects.
4. Design of interaction between the player and the world, optionally using the physics engine
5. Developing a 2D interactive using Pygame

HoD/BOS Chairman

Principal

6. Developing a Puzzle game	
7. Design of menus and user interaction in mobile platforms.	
8. Developing a 3D Game using Unreal	
9. Developing a Multiplayer game using unity	
	Total Contact Hours : 30

Course Outcomes	Upon completion the course students should be able to:
CO1:	Explain the concepts of 2D and 3d Graphics
CO2:	Design game design documents.
CO3:	Implementation of gaming engines.
CO4:	Survey gaming environments and frameworks.
CO5:	Implement a simple game in Pygame.

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
CCS2430	VISUAL EFFECTS	PEC	2	0	2	3

Course Objectives:						
To get a basic idea on animation principles and techniques						
To get exposure to CGI, color and light elements of VFX						
To have a better understanding of basic special effects techniques						
To have a knowledge of state of the art vfx techniques						
To become familiar with popular compositing techniques						

UNIT I	ANIMATION BASICS	6
VFX production pipeline, Principles of animation, Techniques: Keyframe, kinematics, Full animation, limited animation, Rotoscoping, stop motion, object animation, pixilation, rigging, shape keys, motion paths.		
UNIT II	CGI, COLOR, LIGHT	6
CGI – virtual worlds, Photorealism, physical realism, function realism, 3D Modeling and Rendering: color - Color spaces, color depth, Color grading, color effects, HDRI, Light – Area and mesh lights, image based lights, PBR lights, photometric light, BRDF shading model		
UNIT III	SPECIAL EFFECTS	6
Special Effects – props, scaled models, animatronics, pyrotechniques, Schüfftan process, Particle effects – wind, rain, fog, fire		
UNIT IV	VISUAL EFFECTS TECHNIQUES	6
Motion Capture, Matt Painting, Rigging, Front Projection. Rotoscoping, Match Moving – Tracking, camera reconstruction, planar tracking, Calibration, Point Cloud Projection, Ground plane determination, 3D Match Moving		
UNIT V	COMPOSITING	6
Compositing – chroma key, blue screen/green screen, background projection, alpha compositing, deep image compositing, multiple exposure, matting, VFX tools - Blender, Natron, GIMP.		
		Total Contact Hours : 30

LIST OF EXPERIMENTS
1. Using Natron: - Understanding Natron Environment: - Working with color and using color grading - using Channels - Merging images - Using Rotopaint - performing Tracking and stabilizing - Transforming elements - Stereoscopic compositing
2. Using Blender: - Motion Tracking – camera and object tracking - Camera fx, color grading, vignettes

HoD/BOS Chairman

Principal

- Compositing images and video files - Multilayer rendering	
	Total Contact Hours : 30

Course Outcomes	Upon completion the course, students should be able to:
CO1:	To implement animation in 2D / 3D following the principles and techniques.
CO2:	To use CGI, color and light elements in VFX applications.
CO3:	To create special effects using any of the state of the art tools.
CO4:	To apply popular visual effects techniques using advanced tools.
CO5:	To use compositing tools for creating VFX for a variety of applications.

PROFESSIONAL ELECTIVE COURSES: VERTICAL-VI

Subject Code	Subject Name	Category	L	T	P	C
CCS2424	AUGMENTED REALITY/ VIRTUAL REALITY	PEC	2	0	2	3

Course Objectives:

- To impart the fundamental aspects and principles of AR/VR technologies.
- To know the internals of the hardware and software components involved in the development of AR/VR enabled applications.
- To learn about the graphical processing units and their architectures.
- To gain knowledge about AR/VR application development.
- To know the technologies involved in the development of AR/VR based applications.

UNIT – I	INTRODUCTION	7
Introduction to Virtual Reality and Augmented Reality – Definition – Introduction to Trajectories and Hybrid Space-Three I's of Virtual Reality – Virtual Reality Vs 3D Computer Graphics – Benefits of Virtual Reality – Components of VR System – Introduction to AR-AR Technologies-Input Devices – 3D Position Trackers – Types of Trackers – Navigation and Manipulation Interfaces – Gesture Interfaces – Types of Gesture Input Devices – Output Devices – Graphics Display – Human Visual System – Personal Graphics Displays – Large Volume Displays – Sound Displays – Human Auditory System.		
UNIT – II	VR MODELING	6
Modeling – Geometric Modeling – Virtual Object Shape – Object Visual Appearance – Kinematics Modeling – Transformation Matrices – Object Position – Transformation Invariants –Object Hierarchies – Viewing the 3D World – Physical Modeling – Collision Detection – Surface Deformation – Force Computation – Force Smoothing and Mapping – BehaviorModeling – Model Management.		
UNIT – III	VR PROGRAMMING	6
VR Programming – Toolkits and Scene Graphs – World ToolKit – Java 3D – Comparison of World ToolKit and Java 3D		
UNIT – IV	APPLICATIONS	6
Human Factors in VR – Methodology and Terminology – VR Health and Safety Issues – VR and Society-Medical Applications of VR – Education, Arts and Entertainment – Military VR Applications – Emerging Applications of VR – VR Applications in Manufacturing – Applications of VR in Robotics – Information Visualization – VR in Business – VR in Entertainment – VR in Education.		
UNIT – V	AUGMENTED REALITY	5
Introduction to Augmented Reality-Computer vision for AR-Interaction-Modelling and Annotation Navigation-Wearable devices		
		Total Contact Hours:30

LIST OF EXPERIMENTS

1. Study of tools like Unity, Maya, 3DS MAX, AR toolkit, Vuforia and Blender
2. Use the primitive objects and apply various projection types by handling camera.

HoD/BOS Chairman

Principal

3. Download objects from asset store and apply various lighting and shading effects.	
4. Model three dimensional objects using various modelling techniques and apply textures over them.	
5. Create three dimensional realistic scenes and develop simple virtual reality enabled mobile applications which have limited interactivity.	
6. Add audio and text special effects to the developed application.	
7. Develop VR enabled applications using motion trackers and sensors incorporating full haptic interactivity.	
8. Develop AR enabled applications with interactivity like E learning environment, Virtual walkthroughs and visualization of historic places.	
9. Develop AR enabled simple applications like human anatomy visualization, DNA/RNA structure visualization and surgery simulation.	
10. Develop simple MR enabled gaming applications.	
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the basic concepts of AR and VR
CO2:	Understand the tools and technologies related to AR/VR
CO3:	Know the working principle of AR/VR related Sensor devices
CO4:	Design of various models using modeling techniques
CO5:	Develop AR/VR applications in different domains

Textbooks:	
1.	Charles Palmer, John Williamson, “Virtual Reality Blueprints: Create compelling VR experiences for mobile”,Packt Publisher, 2018

Subject Code	Subject Name	Category	L	T	P	C
CCS2431	ROBOTIC PROCESS AUTOMATION	PEC	2	0	2	3

Course Objectives:

- To understand the basic concepts of Robotic Process Automation.
- To expose to the key RPA design and development strategies and methodologies.
- To learn the fundamental RPA logic and structure.
- To explore the Exception Handling, Debugging and Logging operations in RPA.
- To learn to deploy and Maintain the software bot.

UNIT – I	INTRODUCTION TO ROBOTIC PROCESS AUTOMATION	6
Emergence of Robotic Process Automation (RPA), Evolution of RPA, Differentiating RPA from Automation - Benefits of RPA - Application areas of RPA, Components of RPA, RPA Platforms. Robotic Process Automation Tools - Templates, User Interface, Domains in Activities, Workflow Files.		
UNIT – II	AUTOMATION PROCESS ACTIVITIES	6
Sequence, Flowchart & Control Flow: Sequencing the Workflow, Activities, Flowchart, Control Flow for Decision making. Data Manipulation: Variables, Collection, Arguments, Data Table, Clipboard management, File operations Controls: Finding the control, waiting for a control, Act on a control, UiExplorer, Handling Events		
UNIT – III	APP INTEGRATION, RECORDING AND SCRAPING	6
App Integration, Recording, Scraping, Selector, Workflow Activities. Recording mouse and keyboard actions to perform operation, Scraping data from website and writing to CSV. Process Mining.		
UNIT – IV	EXCEPTION HANDLING AND CODE MANAGEMENT	6
Exception handling, Common exceptions, Logging- Debugging techniques, Collecting crash dumps, Error reporting. Code management and maintenance: Project organization, Nesting workflows, Reusability, Templates, Commenting techniques, State Machine.		
UNIT – V	DEPLOYMENT AND MAINTENANCE	6
Publishing using publish utility, Orchestration Server, Control bots, Orchestration Server to deploy bots, License management, Publishing and managing updates. RPA Vendors - Open Source RPA, Future of RPA		
		Total Contact Hours:30

LIST OF EXPERIMENTS

1. Create a Sequence to obtain user inputs display them using a message box.
2. Create a Flowchart to navigate to a desired page based on a condition.

HoD/BOS Chairman

Principal

3. Create a State Machine workflow to compare user input with a random number.	
4. Build a process in the RPA platform using UI Automation Activities.	
5. Create an automation process using key System Activities, Variables and Arguments	
6. Also implement Automation using System Trigger	
7. Automate login to (web)Email account	
8. Recording mouse and keyboard actions.	
9. Scraping data from website and writing to CSV	
10. Implement Error Handling in RPA platform	
11. Web Scraping	
12. Email Query Processing	
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Enunciate the key distinctions between RPA and existing automation techniques and platforms.
CO2:	Use UiPath to design control flows and work flows for the target process
CO3:	Implement recording, web scraping and process mining by automation
CO4:	Use UiPath Studio to detect, and handle exceptions in automation processes
CO5:	Implement and use Orchestrator for creation, monitoring, scheduling, and controlling of automated bots and processes.

Textbooks:	
1.	Learning Robotic Process Automation: Create Software robots and automate business processes with the leading RPA tool - UiPath by Alok Mani Tripathi, Packt Publishing, 2018.
2.	Tom Taulli , “The Robotic Process Automation Handbook: A Guide to Implementing RPA Systems”,Apress publications, 2020.

Subject Code	Subject Name	Category	L	T	P	C
CCS2401	NEURAL NETWORKS AND DEEP LEARNING	PEC	2	0	2	3
Course Objectives:						
To understand the basics in deep neural networks						
To understand the basics of associative memory and unsupervised learning networks						
To apply CNN architectures of deep neural networks						
To analyze the key computations underlying deep learning, then use them to build and train deep neural networks for various tasks						
To apply autoencoders and generative models for suitable applications.						

UNIT – I	INTRODUCTION	6
Neural Networks-Application Scope of Neural Networks-Artificial Neural Network: An Introduction-Evolution of Neural Networks-Basic Models of Artificial Neural Network- Important Terminologies of ANNs-Supervised Learning Network.		
UNIT – II	ASSOCIATIVE MEMORY AND UNSUPERVISED LEARNING NETWORKS	6
Training Algorithms for Pattern Association-Autoassociative Memory Network-Heteroassociative Memory Network-Bidirectional Associative Memory (BAM)-Hopfield Networks-Iterative Autoassociative Memory Networks-Temporal Associative Memory Network-Fixed Weight Competitive Nets-Kohonen Self-Organizing Feature Maps-Learning Vector Quantization-Counter propagation Networks-Adaptive Resonance Theory Network.		
UNIT – III	THIRD-GENERATION NEURAL NETWORKS	6
Spiking Neural Networks-Convolutional Neural Networks-Deep Learning Neural Networks-Extreme Learning Machine Model-Convolutional Neural Networks: The Convolution Operation – Motivation – Pooling – Variants of the basic Convolution Function – Structured Outputs – Data Types – Efficient Convolution Algorithms – Neuroscientific Basis – Applications: Computer Vision, Image Generation, Image Compression.		
UNIT – IV	DEEP FEEDFORWARD NETWORKS	6
History of Deep Learning- A Probabilistic Theory of Deep Learning- Gradient Learning – Chain Rule and Backpropagation - Regularization: Dataset Augmentation – Noise Robustness -Early Stopping, Bagging and Dropout - batch normalization- VC Dimension and Neural Nets.		

HoD/BOS Chairman

Principal

UNIT – V	RECURRENT NEURAL NETWORKS	6
Recurrent Neural Networks: Introduction – Recursive Neural Networks – Bidirectional RNNs – Deep Recurrent Networks – Applications: Image Generation, Image Compression, Natural Language Processing. Complete Auto encoder, Regularized Autoencoder, Stochastic Encoders and Decoders, Contractive Encoders.		
		Total Contact Hours:30

LIST OF EXPERIMENTS	
1.	Implement simple vector addition in TensorFlow.
2.	Implement a regression model in Keras.
3.	Implement a perceptron in TensorFlow/Keras Environment.
4.	Implement a Feed-Forward Network in TensorFlow/Keras.
5.	Implement an Image Classifier using CNN in TensorFlow/Keras.
6.	Improve the Deep learning model by fine tuning hyper parameters.
7.	Implement a Transfer Learning concept in Image Classification.
8.	Using a pre trained model on Keras for Transfer Learning
9.	Perform Sentiment Analysis using RNN
10.	Implement an LSTM based Autoencoder in TensorFlow/Keras.
11.	Image generation using GAN
ADDITIONAL EXPERIMENTS	
12.	Train a Deep learning model to classify a given image using pre trained model
13.	Recommendation system from sales data using Deep Learning
14.	Implement Object Detection using CNN
15.	Implement any simple Reinforcement Algorithm for an NLP problem
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Apply Convolution Neural Network for image processing.
CO2:	Understand the basics of associative memory and unsupervised learning networks.
CO3:	Apply CNN and its variants for suitable applications.
CO4:	Analyze the key computations underlying deep learning and use them to build and train deep neural networks for various tasks.
CO5:	Apply autoencoders and generative models for suitable applications.

Subject Code	Subject Name	Category	L	T	P	C
CCS2432	CYBER SECURITY	PEC	2	0	2	3
Course Objectives:						
- To learn cybercrime and cyberlaw. - To understand the cyber attacks and tools for mitigating them. - To understand information gathering. - To learn how to detect a cyber attack. - To learn how to prevent a cyber attack.						

UNIT – I	INTRODUCTION	6
Cyber Security – History of Internet – Impact of Internet – CIA Triad; Reason for Cyber Crime – Need for Cyber Security – History of Cyber Crime; Cybercriminals – Classification of Cybercrimes – A Global Perspective on Cyber Crimes; Cyber Laws – The Indian IT Act – Cybercrime and Punishment.		
UNIT – II	ATTACKS AND COUNTERMEASURES	6
OSWAP; Malicious Attack Threats and Vulnerabilities: Scope of Cyber-Attacks – Security Breach – Types of Malicious Attacks – Malicious Software – Common Attack Vectors – Social engineering Attack – Wireless Network Attack – Web Application Attack – Attack Tools – Countermeasures.		
UNIT – III	RECONNAISSANCE	6

HoD/BOS Chairman

Principal

Harvester – Whois – Netcraft – Host – Extracting Information from DNS – Extracting Information from E-mail Servers – Social Engineering Reconnaissance; Scanning – Port Scanning – Network Scanning and Vulnerability Scanning – Scanning Methodology – Ping Sweer Techniques – Nmap Command Switches – SYN – Stealth – XMAS – NULL – IDLE – FIN Scans – Banner Grabbing and OS Finger printing Techniques.		
UNIT – IV	INTRUSION DETECTION	6
Host -Based Intrusion Detection – Network -Based Intrusion Detection – Distributed or Hybrid Intrusion Detection – Intrusion Detection Exchange Format – Honeypots – Example System Snort.		
UNIT – V	INTRUSION PREVENTION	6
Firewalls and Intrusion Prevention Systems: Need for Firewalls – Firewall Characteristics and Access Policy – Types of Firewalls – Firewall Basing – Firewall Location and Configurations – Intrusion Prevention Systems – Example Unified Threat Management Products.		
		Total Contact Hours:30

LIST OF EXPERIMENTS	
1. Install Kali Linux on Virtual box	
2. Explore Kali Linux and bash scripting	
3. Perform open source intelligence gathering using Net craft, Who is Lookups, DNS Reconnaissance, Harvester and Maltego	
4. Understand the nmap command d and scan a target using nmap	
5. Install metasploitable2 on the virtual box and search for unpatched vulnerabilities	
6. Use Metasploit to exploit an unpatched vulnerability	
7. Install Linus server on the virtual box and install ssh	
8. Use Fail2banto scan log files and ban Ips that show the malicious signs	
9. Launch brute-force attacks on the Linux server using Hydra.	
10. Perform real-time network traffic analysis and data pocket logging using Snort	
Total Contact Hours:30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Explain the basics of cyber security, cyber crime and cyber law (K2)
CO2:	Classify various types of attacks and learn the tools to launch the attacks (K2)
CO3:	Apply various tools to perform information gathering (K3)
CO4:	Apply intrusion techniques to detect intrusion (K3)
CO5:	Apply intrusion prevention techniques to prevent intrusion (K3)

Subject Code	Subject Name	Category	L	T	P	C
CCS2423	CRYPTOCURRENCY AND BLOCKCHAIN TECHNOLOGIES	PEC	2	0	2	3

Course Objectives:

- To understand the basics of Blockchain
- To learn Different protocols and consensus algorithms in Blockchain
- To learn the Blockchain implementation frameworks
- To understand the Blockchain Applications
- To experiment the Hyperledger Fabric, Ethereum networks

UNIT – I	INTRODUCTION TO BLOCKCHAIN	7
Blockchain- Public Ledgers, Blockchain as Public Ledgers - Block in a Blockchain, Transactions- The Chain and the Longest Chain - Permissioned Model of Blockchain, Cryptographic -Hash Function, Properties of a hash function-Hash pointer and Merkle tree		
UNIT – II	BITCOIN AND CRYPTOCURRENCY	6
A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin Scripts , Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay		
UNIT – III	BITCOIN CONSENSUS	6
Bitcoin Consensus, Proof of Work (PoW)- HashcashPoW , Bitcoin PoW, Attacks on PoW ,monopoly problem- Proof of Stake- Proof of Burn - Proof of Elapsed Time - Bitcoin Miner, Mining Difficulty, Mining Pool-Permissioned model and use cases.		
UNIT – IV	HYPERLEDGER FABRIC & ETHEREUM	5
Architecture of Hyperledger fabric v1.1- chain code- Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity.		
UNIT – V	BLOCKCHAIN APPLICATIONS	6

HoD/BOS Chairman

Principal

Smart contracts, Truffle Design and issue- DApps- NFT. Blockchain Applications in Supply Chain Management, Logistics, Smart Cities, Finance and Banking, Insurance,etc- Case Study.	
	Total Contact Hours:30

LIST OF EXPERIMENTS	
1.	Install and understand Docker container, Node.js, Java and Hyperledger Fabric, Ethereum and perform necessary software installation on local machine/create instance on cloud to run.
2.	Create and deploy a blockchain network using Hyperledger Fabric SDK for Java Set up and initialize the channel, install and instantiate chain code, and perform invoke and query on your blockchain network.
3.	Interact with a blockchain network. Execute transactions and requests against a blockchain network by creating an app to test the network and its rules.
4.	Deploy an asset-transfer app using blockchain. Learn app development within a Hyperledger Fabric network.
5.	Use blockchain to track fitness club rewards. Build a web app that uses Hyperledger Fabric to track and trace member rewards.
6.	Car auction network: A Hello World example with Hyperledger Fabric Node SDK and IBM Blockchain Starter Plan. Use Hyperledger Fabric to invoke chain code while storing results and data in the starter plan.
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand emerging abstract models for Blockchain Technology
CO2:	Identify major research challenges and technical gaps existing between theory and practice in the crypto currency domain.
CO3:	It provides conceptual understanding of the function of Blockchain as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable.
CO4:	Apply hyperledger Fabric and Ethereum platform to implement the Block chain Application.

Subject Code	Subject Name	Category	L	T	P	C
CCS2438	COGNITIVE SCIENCE	PEC	2	0	2	3

Course Objectives:

- To know the theoretical background of cognition.
- To understand the link between cognition and computational intelligence.
- To explore probabilistic programming language.
- To study the computational inference models of cognition.
- To study the computational learning models of cognition.

UNIT – I	PHILOSOPHY, PSYCHOLOGY AND NEUROSCIENCE	6
Philosophy: Mental-physical Relation – From Materialism to Mental Science – Logic and the Sciences of the Mind – Psychology: Place of Psychology within Cognitive Science – Science of Information Processing –Cognitive Neuroscience – Perception – Decision – Learning and Memory – Language Understanding and Processing.		
UNIT – II	COMPUTATIONAL INTELLIGENCE	6
Machines and Cognition – Artificial Intelligence – Architectures of Cognition – Knowledge Based Systems – Logical Representation and Reasoning – Logical Decision Making – Learning – Language – Vision.		
UNIT – III	PROBABILISTIC PROGRAMMING LANGUAGE	6
WebPPL Language – Syntax – Using Javascript Libraries – Manipulating probability types and distributions – Finding Inference – Exploring random computation – Coroutines: Functions that receive continuations –Enumeration		
UNIT – IV	INFERENCE MODELS OF COGNITION	6
Generative Models – Conditioning – Causal and statistical dependence – Conditional dependence – Data Analysis – Algorithms for Inference.		
UNIT – V	LEARNING MODELS OF COGNITION	6
Learning as Conditional Inference – Learning with a Language of Thought – Hierarchical Models– Learning (Deep) Continuous Functions – Mixture Models.		
		Total Contact Hours:30

HoD/BOS Chairman

Principal

LIST OF EXPERIMENTS	
1. Demonstration of Mathematical functions using Web PPL.	
2. Implementation of reasoning algorithms.	
3. Developing an Application system using generative model.	
4. Developing an Application using conditional inference learning model.	
5. Application development using hierarchical model.	
6. Application development using Mixture model.	
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Understand the underlying theory behind cognition.
CO2:	Connect to the cognition elements computationally.
CO3:	Implement mathematical functions through WebPPL.
CO4:	Develop applications using cognitive inference model.
CO5:	Develop applications using cognitive learning model.

Subject Code	Subject Name	Category	L	T	P	C
CCS2434	3D PRINTING AND DESIGN	PEC	2	0	2	3

Course Objectives:

- To discuss on basics of 3D printing
- To explain the principles of 3D printing technique
- To explain and illustrate inkjet technology
- To explain and illustrate laser technology
- To discuss the applications of 3D printing

UNIT – I	INTRODUCTION	6
Introduction; Design considerations – Material, Size, Resolution, Process; Modelling and viewing - 3D; Scanning; Model preparation – Digital; Slicing; Software; File formats		
UNIT – II	PRINCIPLE	6
Processes – Extrusion, Wire, Granular, Lamination, Photopolymerisation; Materials - Paper, Plastics, Metals, Ceramics, Glass, Wood, Fiber, Sand, Biological Tissues, Hydrogels, Graphene; Material Selection - Processes, applications, limitations;		
UNIT – III	INKJET TECHNOLOGY	6
Printer - Working Principle, Positioning System, Print head, Print bed, Frames, Motion control; Print head Considerations – Continuous Inkjet, Thermal Inkjet, Piezoelectric Drop-On-Demand; Material Formulation for jetting; Liquid based fabrication – Continuous jet, Multijet; Powder based fabrication – Colourjet.		
UNIT – IV	LASER TECHNOLOGY	6
Light Sources – Types, Characteristics; Optics – Deflection, Modulation; Material feeding and flow – Liquid, powder; Printing machines – Types, Working Principle, Build Platform, Print bed Movement, Support structures;		
UNIT – V	INDUSTRIAL APPLICATIONS	6
Product Models, manufacturing – Printed electronics, Biopolymers, Packaging, Healthcare, Food, Medical, Biotechnology, Displays; Future trends;		
		Total Contact Hours:30

LIST OF EXPERIMENTS

1. Study the interface and basic tools in the CAD software.
2. Study 3D printer(s) including print heads, build envelope, materials used and related support removal system(s).
3. Review of geometry terms of a 3D mesh.
4. Commands for moving from 2D to 3D.
5. Advanced CAD commands to navigate models in 3D space
6. Design any four everyday objects
Refer to web sites like Thingiverse, Shapeways and GitFab to design four everyday objects that utilize the advantages of 3D printing.
Choose four models from a sharing site like Thingiverse, Shapeways or Gitfab.
a. Improve upon a file and make it your own. Some ideas include:
 - Redesign it with a specific user in mind
 - Redesign it for a slightly different purpose

HoD/BOS Chairman

Principal

Improve the look of the product	
7. Use the CAM software to prepare files for 3D printing.	
8. Manipulate machine movement and material layering.	
9. Repair a 3D mesh using a) Freeware utilities: Autodesk MeshMixer (http://goo.gl/x5nhYc), MeshLab (http://goo.gl/fgztLl) or Netfabb Basic or Cloud Service (http://goo.gl/Q1P47a) b) Freeware tool tutorials: Netfabb Basic or Cloud Service (http://goo.gl/Q1P47a), Netfabb and MeshLab (http://goo.gl/WPOVec) c) Professional tools: Magics or Netfabb Equipment : one 3D printer for every 10-15 students	
	Total Contact Hours:30

Course Outcomes:	Upon completion of the course students should be able to:
CO1:	Outline and examine the basic concepts of 3D printing technology
CO2:	Outline 3D printing workflow`
CO3:	Explain and categorise the concepts and working principles of 3D printing using inkjet technique
CO4:	Explain and categorise the working principles of 3D printing using laser technique
CO5:	Explain various method for designing and modeling for industrial applications

Textbooks:
