TIRUVANNAMALAI
REGULATIONS 2024
CHOICE BASED CREDIT SYSTEM

M.E. POWER ELECTRONICS AND DRIVES (FULL TIME)
CURRICULUM AND SYLLABI FOR I TO IV SEMESTERS

SEMESTER I

SL. NO	COURSE CODE	COURSE TITLE	CATEGORY	PERIODS PER WEEK			TOTAL CONTACT PERIODS	CREDITS
				L	T	P		
THEORY								
1	MA24103	Applied Mathematics for Power Electronics Engineers	FC	3	1	0	4	4
2	PX24101	Analysis of Electrical Machines	PCC	3	1	0	4	4
3	PX24102	Analysis of Power Converters	PCC	3	1	0	4	4
4	PX24103	Modelling and Design Of SMPS	PCC	3	0	0	3	3
5	RM24101	Research Methodology and IPR	RMC	2	0	0	2	2
6		Professional Elective - I	PEC	3	0	0	3	3
7		Audit Course I*	AC	2	0	0	2	0
PRACTICALS								
8	PX24111	Power Converters Laboratory	PCC	0	0	3	3	1.5
9	PX24112	Analog and Digital Controllers for PE Converters Laboratory	PCC	1	0	3	4	2.5
TOTAL				20	3	6	29	24

SEMESTER II

SL. NO	COURSE CODE	COURSE TITLE	CATEGORY	PERIODS PER WEEK			TOTAL CONTACT PERIODS	CREDITS
				L	T	P		
THEORY								
1	PX24201	Analysis of Electrical Drives	PCC	3	1	0	4	4
2	PX24202	Special Electrical Machines	PCC	3	0	0	3	3
3	PX24203	Electric Vehicles and Power Management	PCC	3	1	0	4	4
4		Professional Elective – II	PEC	3	0	0	3	3
5		Professional Elective - III	PEC	3	0	0	3	3
7		Audit Course II*	AC	2	0	0	2	0
PRACTICALS								
8	PX24211	Power Electronics and Drives Laboratory	PCC	0	0	3	3	1.5
9	PX24212	Design Laboratory for Power Electronics Systems	PCC	0	0	3	3	1.5
TOTAL				17	2	6	25	20

7.	NON CREDIT/AUDIT COURSE	*	*	-	-	-
	TOTAL	24	20	15	12	71

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
MA24103	APPLIED MATHEMATICS FOR POWER ELECTRONICS ENGINEERS	FC	3	1	0	4

Course Objectives:

To develop the ability to apply the concepts of matrix theory in Electrical Engineering problems.
To familiarize the students in the field of differential equations to solve boundary value problems associated with engineering applications.
To develop the ability among the students to solve problems using Laplace transform associated with engineering applications.
To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.
To develop the ability among the students to solve problems using Fourier series associated with engineering applications.

UNIT – I	MATRIX THEORY	12
The Cholesky decomposition - Generalized Eigenvectors - Canonical basis - QR factorization - Singular value decomposition - Pseudo inverses - Least square approximation.		
UNIT – II	CALCULUS OF VARIATIONS	12
Concept of variations and its properties - Euler's theorem - Functional dependent on first and higher order of derivatives - Functionals dependent on functions of several independent variables - Variational problems with moving boundaries - Isoperimetric problems - Direct methods : Rayleigh Ritz method and Kantorovich problems .		
UNIT – III	LAPLACE TRANSFORM TECHNIQUES FOR PARTIAL DIFFERENTIAL EQUATIONS	12
Definitions - Properties - Transform error function - Bessel's function - Dirac Delta function - Unit step function - Convolution theorem - Inverse Laplace transform - Complex inversion formula - Solutions to partial differential equations: Heat and Wave equations.		
UNIT – IV	Z - TRANSFORM TECHNIQUES FOR PARTIAL DIFFERENTIAL EQUATIONS	12
Z-transforms - Elementary properties – Convergence of Z-transforms - Initial and final value theorems - Inverse Z - transform (using partial fraction and residues) - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transforms		
UNIT – V	FOURIER SERIES	12
Fourier Trigonometric series : Periodic function as power signals - Convergence of series - Even and odd functions : Cosine and sine series - Non periodic function - Extension to other intervals - Power signals : Exponential Fourier series - Parseval's theorem and power spectrum - Eigenvalue problems and orthogonal functions - Regular Sturm –Liouville systems - Generalized Fourier series		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be
CO1	Able to apply the concepts of matrix theory in Electrical Engineering problems.
CO2	Able to solve boundary value problems associated with engineering applications.
CO3	Able to solve problems using Laplace transform associated with engineering applications.

HoD/BOS Chairman

Principal

CO4	Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.
CO5	Able to solve problems using Fourier series associated with engineering applications.

Subject Code	Subject Name	Category	L	T	P	C
PX24101	ANALYSIS OF ELECTRICAL MACHINES	PCC	3	1	0	4

Course Objectives:

- To understand the principles of electromechanical energy conversion in electrical machines and to know the dynamic characteristics of DC motors
- To study the concepts related with AC machines, magnetic noise and harmonics in rotating electrical machines.
- To interpret the principles of reference frame theory
- To study the principles of three phase, doubly fed and ‘n’ phase induction machine in machine variables and reference variables.
- To understand the principles of three phase, synchronous machine in machine variables and reference variables.

HoD/BOS Chairman

Principal

UNIT – I	ELECTROMECHANICAL ENERGY CONVERSION & DC MACHINES	12
Magnetic circuits, permanent magnet, Energy conservation - stored magnetic energy, co-energy - force and torque in singly and doubly excited systems – Elementary DC machine and analysis of steady state operation - Voltage and torque equations – dynamic characteristics - DC motors – Time domain block diagrams - solution of dynamic characteristic by Laplace transformation		
UNIT – II	AC MACHINES -CONCEPTS	12
Distributed Windings - Winding Functions - Air-Gap Magnetomotive Force -Rotating MMF - Flux Linkage and Inductance -Resistance -Voltage and Flux Linkage Equations for Distributed Winding Machines--magnetic noise and harmonics in rotating electrical machines. Modelling of 'n' phase machine		
UNIT – III	REFERENCE FRAME THEORY	12
Historical background – phase transformation and commutator transformation – transformation of variables from stationary to arbitrary reference frame – transformation of balanced set-variables observed from several frames of reference.		
UNIT – IV	INDUCTION MACHINES	12
Three phase induction machine and doubly fed induction machine- equivalent circuit and analysis of steady state operation – free acceleration characteristics – voltage and torque equations in machine variables and arbitrary reference frame variables – analysis of dynamic performance for load torque variations- Transformation theory for 'n' phase induction machine.		
UNIT – V	SYNCHRONOUS MACHINES	12
Three phase synchronous machine and analysis of steady state operation - voltage and torque equations in machine variables and rotor reference frame variables (Park's equations) – analysis of dynamic performance for load torque variations –Krons primitive machine.		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be
CO1	Understand the principles of electro mechanical energy conversion and characteristics of DC motors
CO2	Know the concepts related with AC machines and modeling of 'n' phase machines
CO3	Interpret the concepts of reference frame theory.
CO4	Apply procedures to develop induction machine model in both machine variable form and reference variable forms
CO5	Follow the procedures to develop synchronous machine model in machine variables form and reference variable form.

CO5	3	2	2	3	1	1
Average:	3	2	2	3	1	1

Subject Code	Subject Name	Category	L	T	P	C
PX24102	ANALYSIS OF POWER CONVERTERS	PCC	3	1	0	4

Course Objectives:

- To provide the mathematical fundamentals necessary for deep understanding of power converter operating modes.
- To introduce the electrical circuit concepts behind the different working modes of power converters so as to enable deep understanding of their operation.
- To impart required skills to formulate and design inverters for generic load and for machine loads.
- To equip with required skills to derive the criteria for the design of power converters starting from basic fundamentals.
- To inculcate knowledge to perform analysis and comprehend the various operating modes of different configurations of power converters

UNIT – I SINGLE PHASE AC-DC CONVERTER 12

Static Characteristics of power diode, SCR and GTO, half controlled and fully controlled converters with R-L, R-L-E loads and freewheeling diodes – continuous and discontinuous modes of operation - inverter operation and its limit –Sequence control of converters – performance parameters – effect of source impedance and overlap-reactive power and power balance in converter circuit

UNIT – II THREE PHASE AC-DC CONVERTER 12

Half controlled and fully controlled converters with R, R-L, R-L-E loads and freewheeling diodes – inverter operation and its limit – performance parameters – effect of source impedance and overlap - 12 pulse converter –Applications - Excitation system, DC drive system.

UNIT – III SINGLE PHASE INVERTERS 12

Introduction to self-commutated switches : MOSFET and IGBT - Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single phase inverters using various PWM techniques – various harmonic elimination techniques – Design of UPS - VSR operation

UNIT – IV THREE PHASE INVERTERS 12

180 degree and 120 degree conduction mode inverters with star and delta connected loads – voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques – VSR operation-Application – Induction heating, AC drive system – Current source inverters.

UNIT – V MODERN INVERTERS 12

Multilevel concept – diode clamped – flying capacitor – cascaded type multilevel inverters -

Comparison of multilevel inverters - application of multilevel inverters – PWM techniques for MLI – Single phase & Three phase Impedance source inverters – Filters.

Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be
CO1	Acquire and apply knowledge of mathematics in power converter analysis
CO2	Model, analyze and understand power electronic systems and equipments.
CO3	Formulate, design and simulate phase controlled rectifiers for generic load and for machine loads
CO4	Design and simulate switched mode inverters for generic load and for machine loads
CO5	Select device and calculate performance parameters of power converters under various operating modes

Average:	2	-	2	2.2	1.8	1.8

Subject Code	Subject Name	Category	L	T	P	C
PX24103	MODELING AND DESIGN OF SMPS	PCC	3	0	0	3

Course Objectives:

• To inculcate knowledge on steady state analysis of Non-Isolated DC-DC converter
• To perform steady state analysis of Isolated DC-DC converter
• To educate on different converter dynamics
• To impart knowledge on the design of controllers for DC-DC converters
• To familiarize the design magnetics for SMPS applications

HoD/BOS Chairman

Principal

UNIT – I	ANALYSIS OF NON-ISOLATED DC-DC CONVERTERS	9
Buck, Boost, Buck- Boost and Cuk converters: Principles of operation – Continuous conduction mode– Concepts of volt-sec balance and charge balance – Analysis and design based on steady state relationships – Introduction to discontinuous conduction mode - SEPIC topology - design examples - Applications to Battery operated vehicle, PV system.		
UNIT – II	ANALYSIS OF ISOLATED DC-DC CONVERTERS	9
Introduction - classification- forward- flyback- push pull – half bridge – full bridge topologies design of SMPS - Applications to Battery operated vehicle		
UNIT – III	CONVERTER DYNAMICS	9
AC equivalent circuit analysis – State space averaging – Circuit averaging – Averaged switch modelling – Transfer function model for buck, boost, buck-boost and cuk converters – Input filters.		
UNIT – IV	CONTROLLER DESIGN	9
Review of P, PI, and PID control concepts – gain margin and phase margin – Bode plot based analysis – Design of controller for buck, boost, buck-boost and cuk converters		
UNIT – V	DESIGN OF MAGNETICS	9
Basic magnetic theory revision – Inductor design – Design of mutual inductance – Design of transformer for isolated topologies – Ferrite core table and selection of area product – wire table – selection of wire gauge		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to
CO1	Analyse and design Non-Isolated DC-DC converter
CO2	Analyse and design Isolated DC-DC converter
CO3	Derive transfer function of different converters
CO4	Design controllers for DC-DC converters
CO5	Design magnetics for SMPS application

Average:	3	-	3	3	2	2

Subject Code	Subject Name	Category	L	T	P	C
PX24111	POWER CONVERTERS LABORATORY	PCC	0	0	3	1.5

Course Objectives:

- To provide the basic understanding of the dynamic behavior of the power electronic switches
- To make the students familiar with the digital processors used in generation of gate pulses for the power electronic switches
- To make the students acquire knowledge on the design of power electronic circuits and implementing the same using simulation tools
- To facilitate the students to design gate drive circuits for power converters
- To provide the fundamentals of DC-AC power converter topologies and analyze the harmonics.

LIST OF EXPERIMENTS:

1. Study of switching characteristics of Power MOSFET & IGBT.
2. Circuit Simulation of Three-phase semi-converter with R, RL & RLE load.
3. Circuit Simulation of Three-phase fully controlled converter with R, RL & RLE load.
4. Circuit Simulation of Three-phase Voltage Source Inverter in 180- and 120-degree mode of conduction
5. Circuit simulation of Three-phase PWM inverter and study of spectrum analysis for various modulation indices.
6. Simulation of Four quadrant operation of DC Chopper.
7. Generation of Gating pulse using Arduino/Micro Controller/PIC microcontroller for a DC-DC converter and single-phase voltage source inverter.
8. Simulation of a single-phase Z-source inverter with R load.
9. Simulation of three-phase AC voltage Controller with R load.
10. Simulation of a five-level cascaded multilevel inverter with R load.
11. Simulation of a Flyback DC-DC converter

Total Contact Hours : 45

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be
CO1	Comprehensive understanding on the switching behaviour of Power Electronic Switches
CO2	Comprehensive understanding on mathematical modeling of power electronic system and ability to implement the same using simulation tools
CO3	Ability of the student to use arduino/microcontroller for power electronic applications
CO4	Ability of the student to design and simulate various topologies of inverters and analyze their harmonic spectrum
CO5	Ability to design and fabricate the gate drive power converter circuits. Analyze the three-phase controlled rectifiers and isolated DC-DC converters for designing the power supplies

Course Objectives:

- To understand the concepts related with analog and digital controllers.
- To design and understand the op-amp circuits and microcontroller circuits for power electronics.
- To study and design the driving circuits, sensing circuits, protection circuits for power converters.
- To design and select the appropriate digital controller for power converters along with control strategy

LIST OF EXPERIMENTS:

1. Amplifiers and buffer design and verification by using Opamp
2. Filter design and verification by using Opamp
3. ON/OFF controller design and verification by using analog circuits
4. Design of Driver Circuit using IR2110
5. Waveform generation by using look up table
6. Generation of PWM gate pulses with duty cycle control using PWM peripheral of microcontroller (TI-C2000 family/ PIC18)

HoD/BOS Chairman

Principal

7. Duty cycle control from IDE
8. Duty Cycle control using a POT connected to ADC peripheral in a standalone mode
9. Generation of Sine-PWM pulses for a single and three phase Voltage Source Inverter with control of modulation index using PWM peripheral of microcontroller (TIC2000family/PIC18).
10. Design and testing of signal conditioning circuit to interface voltage/current sensor with microcontroller (TI-C2000 family/ PIC18)
11. Interface Hall effect voltage and current sensor with microcontroller and display the current waveform in the IDE and validate with actual waveform in DSO
12. Design of closed loop P, I and PI controllers using OP-AMP
13. Design of closed loop P, I and PI controllers using TI-C2000 family/ PIC18
Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be
CO1	Identification of suitable analog and digital controller for the converter design.
CO2	Know the advantages of gate driver, sensing and protection circuits in power converters.
CO3	Hands on with different controller with strategies for design.
CO4	Design and testing the proper driving circuits and protection circuits.
CO5	Fabrication of analog and digital controllers for various real time applications

PO / CO	CO-PO Mapping					
	PO1	PO2	PO3	PO4	PO5	PO6
CO1	2	-	1	1	1	2
CO2	2	-	1	1	2	2
CO3	2	-	2	1	2	2
CO4	2	-	1	1	2	2
CO5	2	1	2	1	2	2
Average:	2	1	1.4	1	1.8	2

Subject Code	Subject Name	Category	L	T	P	C
PX24201	ANALYSIS OF ELECTRICAL DRIVES	PCC	3	1	0	4

Course Objectives:

- To study and analyse the operation of the converter / chopper fed DC drive, both qualitatively and quantitatively.
- To analyse and design the current and speed controllers for a closed loop solid state DC motor drive.
- To understand the drive characteristics for different load torque profiles and quadrants of operation
- To understand the speed control of induction motor drive from stator and rotor sides.
- To study and analyse the operation of VSI & CSI fed induction motor control and pulse width modulation techniques

UNIT – I	DC MOTORS FUNDAMENTALS AND MECHANICAL SYSTEMS	12
-----------------	--	-----------

HoD/BOS Chairman

Principal

DC motor- Types, induced emf, speed-torque relations; Speed control – Armature and field speed control; Ward Leonard control – Constant torque and constant horse power operation Introduction to high speed drives and modern drives. Characteristics of mechanical system–dynamic equations, components of torque, types of load; Requirements of drives characteristics – stability of drives–multi-quadrant operation; Drive elements, types of motor duty and selection of motor rating.		
UNIT – II	CONVERTER AND CHOPPER CONTROL	12
Principle of phase control – Fundamental relations; Analysis of series and separately excited DC motor with single-phase and three-phase converters –performance parameters, performance characteristics. Introduction to time ratio control and frequency modulation; chopper controlled DC motor – performance analysis, multi-quadrant control – Chopper based implementation of braking schemes; Related problems		
UNIT – III	CLOSED LOOP CONTROL	12
Modeling of drive elements – Equivalent circuit, transfer function of self, separately excited DC motors; Linear Transfer function model of power converters; Sensing and feeds back elements – Closed loop speed control – current and speed loops, P, PI and PID controllers – response comparison. Simulation of converter and chopper fed DC drive		
UNIT – IV	VSI AND CSI FED STATOR CONTROLLED INDUCTION MOTOR CONTROL	12
AC voltage controller – six step inverter voltage control-closed loop variable frequency PWM inverter fed induction motor (IM) with braking-CSI fed IM variable frequency motor drives – pulse width modulation techniques – simulation of closed loop operation of stator controlled induction motor drives		
UNIT – V	ROTOR CONTROLLED INDUCTION MOTOR DRIVES	12
Static rotor resistance control – injection of voltage in the rotor circuit – static scherbius drives – static and modified Kramer drives – sub-synchronous and super-synchronous speed operation of induction machines – simulation of closed loop operation of rotor controlled induction motor drives		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Acquire and apply knowledge of mathematics and converter/machine dynamics in Electrical engineering.
CO2	Formulate, design, simulate power supplies for generic load and for machine loads.
CO3	Analyze, comprehend, design and simulate direct current motor based adjustable speed drives.
CO4	Analyze, comprehend, design and simulate induction motor based adjustable speed drives.
CO5	Design a closed loop motor drive system with controllers for the current and speed control operations.

Average:	3	-	3	3	2	2

Subject Code	Subject Name	Category	L	T	P	C
PX24202	SPECIAL ELECTRICAL MACHINES	PCC	3	0	0	3

Course Objectives:

To understand the working, characteristics and speed control principles of stepper motor.
To study the construction, working, characteristics and speed control methods of switched reluctance motors. .
To know the principle of operation, construction, characteristics and speed control methods for the permanent magnet brushless DC motors.
To understand the concepts related with permanent magnet synchronous motors and synchronous reluctance motors.
To know the features of axial flux machines and its working principles.

UNIT – I	STEPPER MOTORS	9
Constructional features – Principle of operation – Types – Torque predictions – Linear and Non- linear analysis – Characteristics – Drive circuits – Closed loop control – Applications.		
UNIT – II	SWITCHED RELUCTANCE MOTORS	9

HoD/BOS Chairman

Principal

Constructional features –Principle of operation- Torque prediction–Characteristics-Power controllers – Control of SRM drive- Speed control-current control-design procedures-Sensorless operation of SRM – Current sensing- rotor position measurement and estimation methods- sensorless rotor position estimation-inductance based estimation – applications.

UNIT – III	PERMANENT MAGNET BRUSHLESS DC MOTORS	9
-------------------	---	----------

Fundamentals of Permanent Magnets- Types- Principle of operation- Magnetic circuit analysis EMF and Torque equations- Characteristics- Controller design-Transfer function –Machine, Load and Inverter-Current and Speed Controller

UNIT – IV	PERMANENT MAGNET SYNCHROUNOUS MOTORS	9
------------------	---	----------

Permanent Magnet ac Machines, Machine Configurations, PMSM - Principle of operation – EMF and Torque equations - Phasor diagram - Torque speed characteristics – Modeling and small signal equations- evaluation of control characteristics- design of current and speed controllers- Constructional features, operating principle and characteristics of synchronous reluctance motor.

UNIT – V	AXIAL FLUX MACHINES	9
-----------------	----------------------------	----------

Axial Flux Permanent Magnet Machines- Comparison with Radial Flux Machines-Development- Geometries, Principle of Operation-Torque production - Applications. Axial flux switched reluctance machine- Topologies and Structures -Operating Principles - Output Equation- Applications.

	Total Contact Hours: 45
--	--------------------------------

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Know the concepts related with stepper motor.
CO2	Understand the working and various characteristics of switched reluctance machines.
CO3	Study the working principle and characteristics of permanent magnet brushless DC motors.
CO4	Know construction, working principles, characteristics of permanent magnet synchronous motor & synchronous reluctance motor.
CO5	Understand the features of axial flux machines in comparison with radial flux machines and to know the principles of axial flux machines.

Textbooks:

1. Jacek F. Gieras, Dr. Rong-Jie Wang, Professor Maarten J. Kamper - Axial Flux Permanent Magnet Brushless Machines-Springer Netherlands (2008)
2. Bilgin, Berker_ Emadi, Ali_ Jiang, James Weisheng - Switched reluctance motor drives: fundamentals to applications-CRC (2019)

Average:	3	1	3	2	2	2

Subject Code	Subject Name	Category	L	T	P	C
PX24203	ELECTRIC VEHICLES AND POWER MANAGEMENT	PCC	3	1	0	4

Course Objectives:

- To understand the concept of electric vehicles and its operations
- To present an overview of Electric Vehicle (EV), Hybrid Electric vehicle (HEV) and their architecture
- To understand the need for energy storage in hybrid vehicles
- To provide knowledge about various possible energy storage technologies that can be used in electric vehicles

UNIT – I	ELECTRIC VEHICLES AND VEHICLE MECHANICS	12
Electric Vehicles (EV), Hybrid Electric Vehicles (HEV), Engine ratings- Comparisons of EV with internal combustion Engine vehicles- Fundamentals of vehicle mechanics.		
UNIT – II	ARCHITECTURE OF EV's AND POWER TRAIN COMPONENTS	12
Architecture of EV's and HEV's – Plug-n Hybrid Electric Vehicles (PHEV)- Power train components and sizing, Gears, Clutches, Transmission and Brakes.		
UNIT – III	POWER ELECTRONICS AND MOTOR DRIVES	12
Electric drive components – Power electronic switches- four quadrant operation of DC drives – Induction motor and permanent magnet synchronous motor-based vector control operation – Switched reluctance motor (SRM) drives- EV motor sizing.		
UNIT – IV	BATTERY ENERGY STORAGE SYSTEM	12
Battery Basics- Different types- Battery Parameters-Battery life & safety impacts - Battery modeling-Design of battery for large vehicles.		
UNIT – V	ALTERNATIVE ENERGY STORAGE SYSTEMS	12
Introduction to fuel cell – Types, Operation and characteristics- proton exchange membrane (PEM) fuel cell for E-mobility– hydrogen storage systems –Super capacitors for transportation applications.		
		Total Contact Hours : 60

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the concept of electric vehicle and energy storage systems.
CO2	Describe the working and components of Electric Vehicle and Hybrid Electric Vehicle.
CO3	Know the principles of power converters and electrical drives.
CO4	Illustrate the operation of storage systems such as battery and super capacitors.
CO5	Analyze the various energy storage systems based on fuel cells and hydrogen storage.

Subject Code:	Subject Name	Category	L	T	P	C
PX24211	POWER ELECTRONICS AND DRIVES LABORATORY	PCC	0	0	3	1.5

Course Objectives:

- To control the speed of DC motor-based drive system.
- To conduct load tests in an electrical drive system.
- To conduct experiments to enhance the understanding of different power electronic controller for motor drive applications.
- To control the speed of Stepper motor and BLDC motor-based drive systems.
- To control the speed of an Induction motor and SRM motor-based drive systems.

LIST OF EXPERIMENTS:

1. Simulation of closed loop control of Converter fed DC drive.
2. Speed control of Converter fed DC motor.
3. Speed control of Chopper fed DC motor.
4. Simulation of VSI fed three phase Induction motor drive.
5. V/f control of Three-Phase Induction motor.
6. Micro controller-based speed control of Stepper motor.

HoD/BOS Chairman

Principal

7. Speed control of BLDC motor.
8. DSP based speed control of SRM motor.
9. Simulation of Four quadrant operation of three-phase induction motor.
10. Voltage Regulation of three-phase Synchronous Generator.
11. AC voltage Controller based speed control of induction motor.
Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Construct the simulation circuit for the closed loop control of drive systems .
CO2	Formulate, design the speed controller for DC motor-based drive system.
CO3	Conduct load tests in an electrical drive system.
CO4	Formulate, design the speed controller for AC motor-based drive system.
CO5	Design the control algorithm for the control of an electrical drive using Microcontroller and Digital signal processor.

PX24212	DESIGN LABORATORY FOR POWER ELECTRONICS SYSTEMS	PCC	0	0	3	1.5

Course Objectives:
- To design power converter after selecting the suitable component for typical applications - To design non-isolated and isolated switching mode regulators

HoD/BOS Chairman

Principal

- To simulate analyse and test different switching mode regulators

LIST OF EXPERIMENTS:

1. Selection and Design of components (Inductor, Capacitor, transformers and devices) for power converters.
2. Design and testing of Isolated converter design and verification (100 W).
3. Design and testing of Non-isolated converter design and verification (100 W).
4. Mini Project Demonstration with applications.

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Independently carryout research and development work in power converters
CO2	Demonstrate a degree of mastery over the design and fabrication of switching regulators.
CO3	Apply conceptual basis required for design and testing of various
CO4	Interact with industry to take up problem of societal importance as mini project designed.
CO5	Compare different possible solution to the same practical problem.

PROFESSIONAL ELECTIVES

SEMESTER I

ELECTIVES I

Subject Code	Subject Name	Category	L	T	P	C
PX24001	POWER SEMICONDUCTOR DEVICES	PEC	3	0	0	3
Course Objectives:						
• To understand the concepts related with power switches and its requirements. • To know about the developments and characteristics of Silicon Carbide (SiC) and Gallium Nitride (GaN) devices • To understand the working, steady state and switching characteristics of current controlled and voltage controlled silicon devices						

HoD/BOS Chairman

Principal

To study the working of driving circuits, protection circuits for power devices.
To understand the thermal characteristics of power devices and the ability to design heat sink for the power devices.

UNIT – I	INTRODUCTION	9
Power switching devices overview – Attributes of an ideal switch, application requirements, circuit symbols; Power handling capability – (SOA); Power diodes – Types, forward and reverse characteristics, switching characteristics – rating. Features and Brief History of Silicon Carbide- Promise and Demonstration of SiC Power Devices- Physical Properties of Silicon Carbide devices –Unipolar and Bipolar Diodes- GaN Technology Overview.		
UNIT – II	CURRENT CONTROLLED DEVICES	9
BJT's – Construction, static characteristics, switching characteristics; Negative temperature coefficient and second breakdown; - Thyristors – Construction, working, static and transient characteristics, types, series and parallel operation; comparison of BJT and Thyristor – steady state and dynamic models of BJT & Thyristor- Basics of GTO, SiC based Bipolar devices- Applications- Building a GaN Transistor –GaN Transistor Electrical Characteristics.		
UNIT – III	VOLTAGE CONTROLLED DEVICES	9
Power MOSFETs and IGBTs – Principle of voltage controlled devices, construction, types, static and switching characteristics, steady state and dynamic models of MOSFET and IGBTs – and IGCT. New semiconductor materials for devices – Intelligent power modules- study of modules like APTGT100TL170G, MSCSM70TAM05TPAG. Integrated gate commutated thyristor (IGCT) - SiC based unipolar devices-applications.		
UNIT – IV	DEVICE SELECTION , DRIVING and PROTECTING CIRCUITS	9
Device selection strategy – On-state and switching losses – EMI due to switching. Necessity of isolation, pulse transformer, opto coupler – Gate drive integrated circuit: Study of Driver IC – IRS2110/2113. SCR, MOSFET, IGBTs and base driving for power BJT. – Over voltage, over current and gate protections; Design of snubbers.		
UNIT – V	THERMAL PROTECTION	9
Heat transfer – conduction, convection and radiation; Cooling – liquid cooling, vapour – phase cooling; Guidance for heat sink selection – Thermal resistance and impedance –Electrical analogy of thermal components, heat sink types and design – Mounting types- switching loss calculation for power device		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Identification of suitable device for the application.
CO2	Know the advantages of Silicon Carbide devices and Gallium Nitride devices.
CO3	Understand the principles and characteristics of Silicon devices, Silicon Carbide devices and Gallium Nitride devices.
CO4	Design proper driving circuits and protection circuits.
CO5	Construct proper thermal protective devices for power semiconductor devices.

Subject Code	Subject Name	Category	L	T	P	C
PX24002	SYSTEM DESIGN USING MICROCONTROLLER	PEC	3	0	0	3

Course Objectives:

- To get introduce the fundamentals of microcontroller based system design.
- To learn I/O and other built in features available in microcontroller.
- To know Microcontroller based system design, applications.
- To learn I/O interface in system Design.
- To involve Discussions/ Practice/Exercise onto revising & familiarizing the concepts.

UNIT – I	8051 ARCHITECTURE	9
Architecture – memory organization – addressing modes – instruction set – Timers – Interrupts – I/O ports, Interfacing I/O Devices – Serial Communication.		
UNIT – II	8051 PROGRAMMING	9
Assembly language programming – Arithmetic Instructions – Logical Instructions –Single bit Instructions – Timer Counter Programming – Serial Communication Programming Interrupt Programming – LCD digital clock/thermometer. Introduction to IDE based assembler programming.		
UNIT – III	PIC 16 MICROCONTROLLER	9
Architecture – memory organization – addressing modes – instruction set – PIC programming in Assembly & C –I/O port, Data Conversion, RAM & ROM Allocation, Timer programming, practice in MP-LAB.		
UNIT – IV	PERIPHERAL OF PIC 16 MICROCONTROLLER	9
Timers – Interrupts, I/O ports- I2C bus-A/D converter-UART- CCP modules –ADC, DAC and Sensor Interfacing –Flash and EEPROM Memories		
UNIT – V	SYSTEM DESIGN –CASE STUDY	9
Interfacing LCD Display – Keypad Interfacing – Generation of Gate signals for converters and Inverters – Motor Control – Controlling DC/ AC appliances – Measurement of frequency- Stand alone Data Acquisition System		
		Total Contact Hours : 45

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the features of microcontroller 8051
CO2	Write programs using 8051 assemble language, utilizing its build in features
CO3	Understand the features of PIC microcontroller.
CO4	Use the peripherals builtin the PIC microcontroller through programming
CO5	Grasp the interfacing concepts involving in the design of microcontroller based systems.

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
PX24003	ELECTROMAGNETIC FIELD COMPUTATION AND MODELLING	PEC	3	0	0	3

Course Objectives:
- To refresh the fundamentals of Electromagnetic Field Theory - To provide foundation in formulation and computation of electromagnetic field equations using analytical methods - To impart knowledge in the concept of problem formulation and computation of electromagnetic field equations using numerical methods. - To compute and analyze the field quantities using FEM. - To formulate, solve, analyze and optimize the design of electrical components

UNIT – I	INTRODUCTION	9
Review of basic field theory – Maxwell's equations – Constitutive relationships and Continuity equations – Laplace, Poisson and Helmholtz equation – principle of energy conversion – force/torque calculation		

HoD/BOS Chairman

Principal

UNIT – II	BASIC SOLUTION METHODS FOR FIELD EQUATIONS	9
Limitations of the conventional design procedure need for the field analysis based design, problem definition, boundary conditions, solution by analytical methods - direct integration method – variable separable method – method of images		
UNIT – III	SOLUTION BY NUMERICAL METHODS	9
Finite Difference Method - Finite Element method – Boundary Elimination method – Variational Formulation – Energy minimization – Discretisation – Shape functions –Stiffness matrix –1D and 2D planar and axial symmetry problems		
UNIT – IV	COMPUTATION OF BASIC QUANTITIES USING FEM PACKAGES	9
Basic quantities – Energy stored in Electric Field – Capacitance – Magnetic Field – Linked Flux – Inductance – Force – Torque – Skin effect – Resistance		
UNIT – V	DESIGN APPLICATIONS	9
Design of Insulators –Magnetic actuators – Transformers – Rotating machines.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Explain and interpret the concept of Electromagnetic Field Theory.
CO2	Formulate the field problem and apply analytical and numerical method for solving Electromagnetic field problems.
CO3	Formulate Finite Element Methodology for solving Electro Magnetic field problem
CO4	Estimate the basic Electromagnetic field quantities using FEM.
CO5	Design electrical apparatus using FEM

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
PX24004	SOFT COMPUTING TECHNIQUES	PEC	3	0	0	3
Course Objectives:						
To educate the students on						
- Design of ANN and fuzzy set theory. - Analysis and implementation of ANN and Fuzzy logic for modeling and control of Non-linear system and to get familiarized with the Matlab toolbox. - Impart the knowledge of various optimization techniques and hybrid schemes with the ANFIS tool box.						

UNIT – I	INTRODUCTION AND ARTIFICIAL NEURAL NETWORKS	9
Introduction to intelligent systems- Soft computing techniques- Conventional Computing versus Swarm Computing - Classification of meta-heuristic techniques - Properties of Swarm intelligent Systems - Application domain - Discrete and continuous problems - Single objective and multi-objective problems -Neuron- Nerve structure and synapse- Artificial Neuron and its model- activation functions- Neural network architecture- single layer and multilayer feed forward networks- Mc Culloch Pitts neuron model- perceptron model- Adaline and Madaline- multilayer perception model- back propogation learning methods- effect of learning rule coefficient -back propagation algorithm- factors affecting back propagation training-applications.		
UNIT – II	ARTIFICIAL NEURAL NETWORKS AND ASSOCIATIVE MEMORY	9
Counter propagation network- architecture- functioning & characteristics of counter Propagation network- Hopfield/ Recurrent network configuration - stability constraints associative memory and characteristics- limitations and applications- Hopfield v/s Boltzman machine- Adaptive Resonance Theory- Architecture- classifications- Implementation and training - Associative Memory.		
UNIT – III	FUZZY LOGIC SYSTEM	9
Introduction to crisp sets and fuzzy sets- basic fuzzy set operation and approximate reasoning. Introduction to fuzzy logic modeling and control- Fuzzification inferencing and defuzzification- Fuzzy knowledge and rule bases-Fuzzy modeling and control schemes for nonlinear systems. Self organizing fuzzy logic control- Fuzzy logic control for nonlinear time delay system.		
UNIT – IV	GENETIC ALGORITHM	9
Evolutionary programs – Genetic algorithms, genetic programming and evolutionary programming - Genetic Algorithm versus Conventional Optimization Techniques - Genetic representations and selection mechanisms; Genetic operators- different types of crossover and mutation operators - Optimization problems using GA-discrete and continuous - Single objective and multi-objective problems - Procedures in evolutionary programming.		
UNIT – V	HYBRID CONTROL SCHEMES	9
Fuzzification and rule base using ANN–Neuro fuzzy systems-ANFIS – Fuzzy Neuron - Optimization of membership function and rule base using Genetic Algorithm –Introduction to Support Vector Machine- Evolutionary Programming-Particle Swarm Optimization - Case study – Familiarization of NN, FLC and ANFIS Tool Box.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the basic architectures of NN and Fuzzy sets

HoD/BOS Chairman

Principal

CO2	Design and implement ANN architectures, algorithms and know their limitations
CO3	Identify and work with different operations on the fuzzy sets.
CO4	Develop ANN and fuzzy logic based models and control schemes for non-linear systems.
CO5	Understand and explore hybrid control schemes and PSO

CO5	2	-	2	2	1	1
Average:	2.8	-	2	2	1	1

Subject Code	Subject Name	Category	L	T	P	C
PS24001	SYSTEM THEORY	PEC	3	0	0	3

Course Objectives:

• To educate on modeling and representing systems in state variable form.
• To train on solving linear and non-linear state equations.
• To illustrate the properties of control system.
• To classify non-linearities and examine stability of systems in the sense of Lyapunov's theory.
• To educate on modal concepts, design of state, output feedback controllers and estimators.

UNIT – I	STATE VARIABLE REPRESENTATION	9
Introduction-Concept of State-Space equations for Dynamic Systems –Time invariance and linearity- Non uniqueness of state model- Physical Systems and State Assignment – free and forced responses- State Diagrams.		
UNIT – II	SOLUTION OF STATE EQUATIONS	9

HoD/BOS Chairman

Principal

Existence and uniqueness of solutions to Continuous-time state equations – Solution of Nonlinear and Linear Time Varying State equations – State transition matrix and its properties – Evaluation of matrix exponential- System modes- Role of Eigen values and Eigen vectors.

UNIT – III PROPERTIES OF THE CONTROL SYSTEM 9

Controllability and Observability- Stabilizability and Detectability-Test for Continuous time Systems- Time varying and Time invariant case-Output Controllability-Reducibility-System Realizations.

UNIT – IV NON-LINEARITIES AND STABILITY ANALYSIS 9

Equilibrium Points-Stability in the sense of Lyapunov-BIBO Stability-Stability of LTI Systems- Types of nonlinearity – Phase plane analysis – Singular points – Limit cycles – Construction of phase trajectories – Describing function method – Derivation of describing functions. Equilibrium Stability of Nonlinear Continuous Time Autonomous Systems – Direct Method of Lyapunov and the Linear Continuous-Time Autonomous Systems- Lyapunov Functions for Nonlinear Continuous Time Autonomous Systems-Krasovskii and Variable-Gradient Method

UNIT – V MODAL ANALYSIS 9

Controllable and Observable Companion Forms – SISO and MIMO Systems – Effect of State Feedback on Controllability and Observability-Pole Placement by State Feedback for both SISO and MIMO Systems-Full Order and Reduced Order Observers.

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the concept of State-State representation for Dynamic Systems
CO2	Explain the solution techniques of state equations
CO3	Realize the properties of control systems in state space form
CO4	Identify non-linearities and evaluate the stability of the system using Lyapunov notion
CO5	Perform Modal analysis and design controller and observer in state space form

SEMESTER II
ELECTIVES II & III

Subject Code	Subject Name	Category	L	T	P	C
PX24005	POWER ELECTRONICS FOR RENEWABLE ENERGY SYSTEMS	PEC	3	0	0	3
Course Objectives:						
To provide knowledge about different types of renewable energy systems.						
To analyze the various electrical Generators used for the Wind Energy Conversion Systems.						
To design a power converter used in renewable energy systems such as AC-DC, DC-DC, and AC-AC converters.						
To understand the importance of standalone, grid-connected, and hybrid operation in renewable energy systems.						
To analyse various maximum power point tracking algorithms						

UNIT – I	INTRODUCTION TO RENEWABLE ENERGY SYSTEMS	9
Classification of Energy Sources–Importance of Non-conventional energy sources–Advantages and disadvantages of conventional energy sources–Environmental aspects of energy–Impacts of renewable energy generation on the environment – Qualitative study of renewable energy resources: Ocean energy, Biomass energy, Hydrogen energy, - Solar Photovoltaic (PV), Fuel cells: Operating principles and characteristics, Wind Energy: Nature of wind, Types, control strategy, operating area		
UNIT – II	ELECTRICAL MACHINES FOR WIND ENERGY CONVERSION SYSTEMS(WECS)	9
Review of reference theory fundamentals –Construction, Principle of operation and analysis:Squirrel Cage Induction Generator (SCIG), Doubly Fed Induction Generator (DFIG) – Permanent Magnet Synchronous Generator (PMSG).		
UNIT – III	POWER CONVERTERS AND ANALYSIS OF SOLAR PV SYSTEMS	9
Line commutated converters (inversion-mode) – Boost and buck-boost converters- selection of inverter, battery sizing, array sizing. Analysis: Block diagram of the solar PV systems – Types of Solar PV systems: Stand-alone PV systems, Grid integrated solar PV Systems–Grid connection Issues		
UNIT – IV	POWER CONVERTERS AND ANALYSIS OF WIND SYSTEMS	9
Power Converters: Three-phase AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid-Interactive Inverters – Matrix converter. Analysis: Stand-alone operation of fixed and variable speed WECS-Grid integrated SCIG and PMSG based WECS.		
UNIT – V	HYBRID RENEWABLE ENERGY SYSTEMS	9
Need for Hybrid Systems-Range and type of Hybrid systems-Case studies of Diesel-PV, Wind- PV, Microhydel-PV, Biomass-Diesel systems–Maximum Power Point Tracking(MPPT).		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
-------------------------	---

HoD/BOS Chairman

Principal

CO1	Analyze the impacts of renewable energy technologies On the environment and demonstrate them to harness electrical power.
CO2	Select a suitable Electrical machine for Wind Energy Conversion
CO3	Design the power converters such as AC-DC, DC-DC, and AC-AC converters for Solar energy systems.
CO4	Design the power converters such as AC-DC, DC-DC, and AC-AC converters for Wind energy systems.
CO5	Interpret the stand-alone, grid-connected, and hybrid renewable energy systems with MPPT

Average:	3	-	3	3	2	2

Subject Code	SUBJECT NAME	Category	L	T	P	C
PX24006	MODERN RECTIFIERS AND RESONANT CONVERTERS	PEC	3	0	0	3

Course Objectives:

- To inculcate knowledge on harmonics standards.
- To impart knowledge on the design power factor correction rectifiers for UPS applications.
- To familiarize the design resonant converters for SMPS applications.
- To provide knowledge on dynamic analysis of DC to DC Converters.
- To introduce the control techniques for control of resonant converters.

UNIT – I	POWER SYSTEM HARMONICS & LINE COMMUTATED RECTIFIERS	9
-----------------	--	----------

HoD/BOS Chairman

Principal

Average power-RMS value of an AC waveform-Power factor-AC line current harmonic standards IEC 1000-IEEE 519- The Single phase full wave rectifier-Continuous Conduction Mode-Discontinuous Conduction Mode-Single phase Rectifier's behavior for large value of Capacitance – Minimizing THD for small value of Capacitance- Three phase rectifiers- Continuous Conduction Mode-Discontinuous Conduction Mode-Introduction to Harmonic trap filters.		
UNIT – II	PULSE WIDTH MODULATED RECTIFIERS	9
Properties of Ideal rectifiers-Realization of non-ideal rectifier-Single phase converter system incorporating ideal rectifiers-Modeling losses and efficiency in CCM – high quality rectifiers-Boost rectifier-expression for controller duty cycle-expression for DC load current-solution for converter Efficiency.		
UNIT – III	RESONANT CONVERTERS	9
Review on Parallel and Series Resonant Switches-Soft Switching- Zero Current Switching – Zero Voltage Switching –Classification of Quasi resonant switches-Zero Current and Zero Voltage Switching of Quasi Resonant Buck converter- Zero Current and Zero Voltage Switching of Quasi Resonant Boostconverter: Steady State analysis		
UNIT – IV	DYNAMIC ANALYSIS OF SWITCHING CONVERTERS	9
Review of linear system analysis-State Space Averaging-Basic State Space Average Model- StateSpace Averaged model for Buck Converter, Boost Converter, Buck Boost Converter and Cuk Converter		
UNIT – V	CONTROL OF PWM RECTIFIERS	9
Pulse Width Modulation-Voltage Mode PWM Scheme-Current Mode PWM Scheme-Average current control-Current programmed Control- Hysteresis control- Nonlinear carrier control –Design of Controllers: PI Controller, Variable Structure Controller for source current shaping of PWM rectifiers.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the standards for supply current harmonics and its significance.
CO2	Design power factor correction rectifiers for UPS applications.
CO3	Analyse and design the resonant converters.
CO4	Derive the state space model of basic and derived DC-DC converters.
CO5	Design an appropriate controller for PWM rectifiers.

CO5	3	-	3	3	2	2
Average:	3	-	3	3	2	2

Subject Code	Subject Name	Category	L	T	P	C
PX24007	ADVANCED POWER CONVERTERS	PEC	3	0	0	3
Course Objectives:						
- To study the operation of voltage lift circuits - To impart knowledge on the working of super lift circuits - To learn the operation of ultra lift converters and multiple quadrant converters - To provide knowledge on the principle of bidirectional dual active bridge converters - To educate on the working principle of Impedance source converter						

UNIT – I	VOLTAGE-LIFT CONVERTERS	9
Introduction- Self-lift and reverse self-lift circuits- Cuk converter, Luo converter and SEPIC converter- continuous and discontinuous conduction mode.-Applications		
UNIT – II	POSITIVE OUTPUT & NEGATIVE OUTPUT SUPER-LIFT LUO-CONVERTERS	9
Main series, -Elementary Circuit, Re-Lift Circuit, Triple-Lift Circuit, Higher-Order Lift Circuit-. Continuous and discontinuous conduction modes- Applications		
UNIT – III	ULTRA LIFT CONVERTERS AND MULTIPLE-QUADRANT OPERATING LUO-CONVERTERS	9
Ultra-Lift Luo- Converter- Operation – Continuous and discontinuous conduction Modes of Ultra- Lift Luo-Converter-Instantaneous Values- Multiple quadrant operating Luo Converters- Circuit explanations-Modes of operation- Applications		
UNIT – IV	BIDIRECTIONAL DUAL ACTIVE BRIDGE DC-DC CONVERTERS	9
Application of Bidirectional DC-DC Converter-Classification of Bidirectional DC-DC Converter – Working Principle of Hybrid-Bridge-Based Dual active bridge (DAB) converter- Performance- Voltage mode control- Principle of Dual-Transformer based DAB converter- Three-Level bidirectional DC-DC converter- Applications		
UNIT – V	IMPEDANCE SOURCE CONVERTER	9
Voltage-Fed Z-source inverters –Topologies –Steady state and dynamic model- Current fed Z- source inverter –Topology –Modification and operational principles. Modulation Methods- Sine PWM- SVPWM and Pulse width Amplitude Modulation- Applications		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the working of voltage lift circuits
CO2	Design the super lift converters

HoD/BOS Chairman

Principal

CO3	Understand the working and applications of ultra-lift converters
CO4	Acquire knowledge on working and design of bi-directional DC-DC converters
CO5	Understand the concepts related with impedance source converter

Textbooks:

Average:	2	-	2	3	2	1

Subject Code	Subject Name	Category	L	T	P	C
PX24008	CONTROL OF POWER ELECTRONIC CIRCUITS	PEC	3	0	0	3

Course Objectives:

• To inculcate knowledge on the basics of control for power electronic circuits
• To illustrate the concepts of feedback controllers for DC-DC converters
• To learn about the controller design for AC-DC converter circuits
• To impart knowledge on sliding mode control
• To equip with required skills to design flatness-based controllers

UNIT – I	CONTROLLER DESIGN FOR BASIC DC-DC CONVERTERS- PART I	9
Introduction, Review of Linear Control Theory, Linearization of Various Transfer Function Blocks, Feedback Controller Design in Voltage-Mode Control, Peak-Current Mode Control, Feedback Controller Design in DCM		
UNIT – II	CONTROLLER DESIGN FOR BASIC DC-DC CONVERTERS- PART II	9

HoD/BOS Chairman

Principal

Introduction, Linear Feedback Control- Pole Placement by Full State Feedback, Pole Placement Based on Observer Design, Reduced Order Observers, Generalized Proportional Integral Controllers- Hamiltonian Systems Viewpoint - Application to power converters

UNIT – III	CONTROLLER DESIGN FOR BASIC AC-DC CONVERTER CIRCUITS	9
-------------------	---	----------

Introduction, Operating Principle of Single-Phase PFCs, Control of PFCs, Designing the Inner Average-Current-Control Loop, Designing the Outer Voltage-Control Loop, Example of Single-Phase PFC Systems

UNIT – IV	SLIDING MODE CONTROL	9
------------------	-----------------------------	----------

Introduction, Variable Structure Systems, Control of Single Switch Regulated Systems, Sliding Surfaces, Equivalent Control and the Ideal Sliding Dynamics, Accessibility of the Sliding Surface, Invariance Conditions for Matched Perturbations- Application to power converters

UNIT – V	FLATNESS BASED CONTROL	9
-----------------	-------------------------------	----------

Flatness, the use of the differential flatness property, Controller development using flatness- Application to power converters.

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Design controller for front end power factor corrector circuits.
CO2	Design controllers for UPS application.
CO3	Design controllers for AC-DC converters.
CO4	Design sliding mode control for power converters.
CO5	Design flatness based control for power converters.

Average:	2.4	-	2.4	1.6	2.4	1.6

Subject Code	Subject Name	Category	L	T	P	C
PS24002	ENERGY STORAGE TECHNOLOGIES	PEC	3	0	0	3

Course Objectives:

- To analyze thermal storage system
- To analyze different battery storage technologies
- To analyze the thermodynamics of Fuel Cell
- To study the various applications of energy storage systems

UNIT – I	INTRODUCTION	9
Necessity of energy storage – types of energy storage – energy storage technologies – Applications		
UNIT – II	THERMAL STORAGE SYSTEM	9
Thermal storage – Types – Modeling of thermal storage units – Simple water and rock bed storage system – Pressurized water storage system – Modelling of phase change storage system – Simple units, Packed bed storage units - Modelling using porous medium approach,		
UNIT – III	ELECTRICAL ENERGY STORAGE	9
Fundamental concept of batteries – Measuring of battery performance, charging and dis charging of a battery, storage density, energy density, and safety issues - Types of batteries: – Lead Acid, Nickel-Cadmium, Zinc-Manganese dioxide - Mathematical Modelling for Lead Acid Batteries – Flow Batteries.		
UNIT – IV	FUEL CELL	9
Fuel Cell – History of Fuel cell, Principles of Electrochemical storage – Types: Hydrogen oxygen cells, Hydrogen air cell, Hydrocarbon air cell, Alkaline fuel cell - Detailed analysis – Advantages and disadvantages –Fuel Cell Thermodynamics.		
UNIT – V	ALTERNATE ENERGY STORAGE TECHNOLOGIES	9
Flywheel, Super capacitors, Principles & Methods – Applications, Compressed air Energy storage, Concept of Hybrid Storage – Applications, Pumped Hydro Storage – Applications.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the physics of energy storage
CO2	Model the different energy technologies.
CO3	Recognize the applications of various techniques.
CO4	Design and analyze the energy storage technologies.
CO5	Select and apply the appropriate technique based on the application.

Average:	2.25	1.6	2.25	1	2.6	3

Subject Code	Subject Name	Category	L	T	P	C
PX24009	POWER QUALITY	PEC	3	0	0	3

Course Objectives:

- To provide knowledge about various power quality issues.
- To understand the concept of power and power factor in single phase and three phase systems supplying nonlinear loads.
- To equip with required skills to design conventional compensation techniques for power factor correction and load voltage regulation.
- To introduce the control techniques for the active compensation.
- To understand the mitigation techniques using custom power devices such as DSTATCOM, DVR & UPQC

UNIT – I	INTRODUCTION	9
Introduction – Characterization of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Non-linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.		
UNIT – II	ANALYSIS OF SINGLE PHASE AND THREE PHASE SYSTEM	9
Single phase linear and non-linear loads – single phase sinusoidal, non-sinusoidal source – supplying linear and nonlinear loads – three phase balanced system – three phase unbalanced system – three phase unbalanced and distorted source supplying non-linear loads – concept of power factor – three phase- three wire – three phase - four wire system.		
UNIT – III	CONVENTIONAL LOAD COMPENSATION METHODS	9

HoD/BOS Chairman

Principal

Principle of load compensation and voltage regulation – classical load balancing problem : open loop balancing – closed loop balancing, current balancing – harmonic reduction and voltage sag reduction– analysis of unbalance – instantaneous of real and reactive powers – Extraction of fundamental sequence component from measured.

UNIT – IV | **LOAD COMPENSATION USING DSTATCOM** | **9**

Compensating single – phase loads – Ideal three phase shunt compensator structure – generating reference currents using instantaneous PQ theory – Instantaneous symmetrical components theory – Generating reference currents when the source is unbalanced –Realization and control of DSTATCOM – DSTATCOM in Voltage control mode

UNIT – V | **SERIES COMPENSATION OF POWER DISTRIBUTION SYSTEM** | **9**

Rectifier supported DVR – DC Capacitor supported DVR – DVR Structure – Voltage Restoration – Series Active Filter – Unified Power Quality Conditioner

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	comprehend the consequences of Power Quality issues.
CO2	conduct harmonic analysis of single phase and three phase systems supplying non-linear loads.
CO3	design passive filter for load compensation.
CO4	design active filters for load compensation.
CO5	understand the mitigation techniques using custom power devices such as distribution static compensator (DSTATCOM), dynamic voltage restorer (DVR) & UPQC.

Textbooks:

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
ET24001	DSP BASED SYSTEM DESIGN	PEC	3	0	0	3
Course Objectives:						
To understand various representation methods of DSP system						
To provide insight about different DSP algorithms						
To familiarize the various architectures of DSP system						
To perform analysis of DSP architectures and to learn the implementation of DSP system in programmable hardware						
To learn the details of DSP system interfacing with other peripherals						

UNIT – I	REPRESENTATION OF DSP SYSTEM	9
Single Core and Multicore, Architectural requirement of DSPs - high throughput, low cost, low power, small code size, embedded applications. Representation of digital signal processing systems - block diagrams, signal flow graphs, data-flow graphs, dependence graphs. Techniques for enhancing computational throughput - parallelism and pipelining.		
UNIT – II	DSP ALGORITHMS	9
DSP algorithms - Convolution, Correlation, FIR/IIR filters, FFT, adaptive filters, sampling rate converters, DCT, Decimator, Expander and Filter Banks. DSP applications. Computational characteristics of DSP algorithms and applications, Numerical representation of signals-word length effect and its impact, Carry free adders, Multiplier.		
UNIT – III	SYSTEM ARCHITECTURE	9
Introduction, Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Features for External Interfacing. VLIW architecture. Basic performance issue in pipelining, Simple implementation of MIPS, Instruction Level Parallelism, Dynamic Scheduling, Dynamic Hardware Prediction, Memory hierarchy. Study of FIxed point and floating point DSP architectures		
UNIT – IV	ARCHITECTURE ANALYSIS ON PROGRAMMABLE HARDWARE	9
Analysis of basic DSP Architectures on programmable hardwares. Algorithms for FIR , IIR, Lattice filter structures, architectures for real and complex fast Fourier transforms, 1D/2D Convolutions, Winograd minimal filtering algorithm. FPGA: Architecture, different sub-systems, design flow for DSP system design, mapping of DSP algorithms onto FPGA.		
UNIT – V	SYSTEM INTERFACING	9
Examples of digital signal processing algorithms suitable for parallel architectures such as GPUs and multiGPUs. Interfacing: Introduction, Synchronous Serial Interface CODE, A CODEC Interface Circuit, ADC interface.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Evaluate the DSP system using various methods.
CO2	Design algorithm suitable for different DSP applications
CO3	Explain various architectures of DSP system.
CO4	Implement DSP system in programmable hardware.
CO5	Build interfacing of DSP system with various peripherals.

Course Objectives:

- Understanding about the learning problem and algorithms
- Providing insight about neural networks
- Introducing the machine learning fundamentals and significance
- Enabling the students to acquire knowledge about pattern recognition.
- Motivating the students to apply deep learning algorithms for solving real life problems.

UNIT – I	LEARNING PROBLEMS AND ALGORITHMS	9
Various paradigms of learning problems, Supervised, Semi-supervised and Unsupervised algorithms		
UNIT – II	NEURAL NETWORKS	9
Differences between Biological and Artificial Neural Networks - Typical Architecture, Common Activation Functions, Multi-layer neural network, Linear Separability, Hebb Net, Perceptron, Adaline, Standard Back propagation Training Algorithms for Pattern Association - Hebb rule and Delta rule, Hetero associative, Auto associative, Kohonen Self Organising Maps, Examples of Feature Maps, Learning Vector Quantization,		

 HoD/BOS Chairman

 Principal

Gradient descent, Boltzmann Machine Learning.		
UNIT – III	MACHINE LEARNING – FUNDAMENTALS & FEATURE SELECTIONS & CLASSIFICATIONS	9
Classifying Samples: The confusion matrix, Accuracy, Precision, Recall, F1- Score, the curse of dimensionality, training, testing, validation, cross validation, overfitting, underfitting the data, early stopping, regularization, bias and variance. Feature Selection, normalization, dimensionality reduction, Classifiers: KNN, SVM, Decision trees, Naïve Bayes, Binary classification, multi class classification, clustering.		
UNIT – IV	DEEP LEARNING: CONVOLUTIONAL NEURAL NETWORKS	9
Feed forward networks, Activation functions, back propagation in CNN, optimizers, batch normalization, convolution layers, pooling layers, fully connected layers, dropout, Examples of CNNs.		
UNIT – V	DEEP LEARNING: RNNs, AUTO ENCODERS AND GANS	9
State, Structure of RNN Cell, LSTM and GRU, Time distributed layers, Generating Text, Autoencoders: Convolutional Autoencoders, Denoising autoencoders, Variational autoencoders, GANs: The discriminator, generator, DCGANs		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Illustrate the categorization of machine learning algorithms.
CO2	Compare and contrast the types of neural network architectures, activation functions
CO3	Acquaint with the pattern association using neural networks
CO4	Elaborate various terminologies related with pattern recognition and architectures of convolutional neural networks
CO5	Construct different feature selection and classification techniques advanced neural network architectures such as RNN, Auto encoders, and GANs.

Average:	1	3	1	-	-	-

Subject Code	Subject Name	Category	L	T	P	C
ET24003	IoT FOR SMART SYSTEMS	PEC	3	0	0	3

Course Objectives:

- To study about Internet of Things technologies and its role in real time applications.
- To introduce the infrastructure required for IoT
- To familiarize the accessories and communication techniques for IoT.
- To provide insight about the embedded processor and sensors required for IoT
- To familiarize the different platforms and Attributes for IoT

UNIT – I	INTRODUCTION TO INTERNET OF THINGS	9
Overview, Hardware and software requirements for IOT, Sensor and actuators, Technology drivers, Business drivers, Typical IoT applications, Trends and implications		
UNIT – II	IOT ARCHITECTURE	9
IoT reference model and architecture -Node Structure - Sensing, Processing, Communication, Powering, Networking - Topologies, Layer/Stack architecture, IoT standards, Cloud computing for IoT, Bluetooth, Bluetooth Low Energy beacons.		
UNIT – III	PROTOCOLS AND WIRELESS TECHNOLOGIES FOR IOT	9
PROTOCOLS: NFC, SCADA and RFID, Zigbee MIPI, M-PHY, UniPro, SPMI, SPI, M-PCIe GSM, CDMA,LTE, GPRS, small cell. Wireless technologies for IoT: WiFi (IEEE 802.11), Bluetooth/Bluetooth Smart, ZigBee/ZigBee Smart, UWB (IEEE 802.15.4), 6LoWPAN, Proprietary systems-Recent trends.		
UNIT – IV	IOT PROCESSORS	9
Services/Attributes: Big-Data Analytics for IOT, Dependability, Interoperability, Security, Maintainability. Embedded processors for IOT : Introduction to Python programming -Building IOT with RASPERRY PI and Arduino		
UNIT – V	CASE STUDIES	9
Industrial IoT, Home Automation, smart cities, Smart Grid, connected vehicles, electric vehicle charging, Environment, Agriculture, Productivity Applications, IOT Defense		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Analyze the concepts of IoT and its present developments.
CO2	Compare and contrast different platforms and infrastructures available for IoT
CO3	Explain different protocols and communication technologies used in IoT
CO4	Analyze the big data analytic and programming of IoT
CO5	Implement IoT solutions for smart applications

ET24004	MEMS DESIGN: SENSORS AND ACTUATORS	PEC	3	0	0	3

Course Objectives:

- To analyse the properties of materials, microstructure and fabrication methods.
- To design and modeling of Electrostatic sensors and actuators.
- To teach the characterizing thermal sensors and actuators through design and modeling.
- To understand the fundamentals of piezoelectric sensors and actuators through exposure to different MEMS and NEMS devices

UNIT – I	MICRO-FABRICATION, MATERIALS AND ELECTRO-MECHANICAL	9
Overview of micro fabrication – Silicon and other material based fabrication processes – Concepts: Conductivity of semiconductors-Crystal planes and orientation-stress and strain- flexural beam bending analysis- torsional deflections-Intrinsic stress- resonant frequency and quality factor.		
UNIT – II	ELECTROSTATIC SENSORS AND ACTUATION	9
Principle, material, design and fabrication of parallel plate capacitors as electrostatic sensors and actuators-Applications		
UNIT – III	THERMAL SENSING AND ACTUATION	9
Principle, material, design and fabrication of thermal couples, thermal bimorph sensors, thermal resistor sensors-Applications.		

HoD/BOS Chairman

SEMESTER III**ELECTIVES IV & V**

Subject Code	Subject Name	Category	L	T	P	C
PX24010	NONLINEAR DYNAMICS FOR POWER ELECTRONICS CIRCUITS	PEC	3	0	0	3

Course Objectives:

- To understand the non-linear behaviour of power electronic converters.
- To understand the techniques for investigation on non-linear behaviour of power electronic converters.
- To analyse the nonlinear phenomena in DC to DC converters.
- To analyse the nonlinear phenomena in AC and DC Drives.

UNIT – I	BASICS OF NONLINEAR DYNAMICS	9
Basics of Nonlinear Dynamics: System, state and state space model, Vector field-Modeling of Linear, nonlinear and Linearized systems, Attractors , chaos, Poincare map, Dynamics of Discrete time system, Lyapunov Exponent, Bifurcations, Bifurcations of smooth map, Bifurcations in piece wise smooth maps, border crossing and border collision bifurcation.		
UNIT – II	TECHNIQUES FOR INVESTIGATION OF NONLINEAR PHENOMENA	9
Techniques for experimental investigation, Techniques for numerical investigation, Computation of averages under chaos, Computations of spectral peaks, Computation of the bifurcation and analyzing stability.		
UNIT – III	NONLINEAR PHENOMENA IN DC-DC CONVERTERS	9
Border collision in the Current Mode controlled Boost Converter, Bifurcation and chaos in the Voltage controlled Buck Converter with latch, Bifurcation and chaos in the Voltage controlled Buck Converter without latch, Bifurcation and chaos in Cuk Converter. Nonlinear phenomenon in the inverter under tolerance band control		
UNIT – IV	NONLINEAR PHENOMENA IN DRIVES	9
Nonlinear Phenomenon in Current controlled and voltage controlled DC Drives, Nonlinear Phenomenon in PMSM Drives.		
UNIT – V	CONTROL OF CHAOS	9
Hysteresis control, Sliding mode and switching surface control, OGY Method, Pyragas method, Time Delay control. Application of the techniques to the Power electronics circuit and drives.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand, model and simulate chaotic behavior in power electronic systems.
CO2	Investigate the various techniques of non-linear phenomena
CO3	Analyze the nonlinear phenomena in DC-DC converter
CO4	Analyze the non-linear phenomena in Drives
CO5	Mitigate chaotic behavior noticed in power system.

Subject Code	Subject Name	Category	L	T	P	C
PX24011	GRID INTEGRATION OF RENEWABLE ENERGY SOURCES	PEC	3	0	0	3

Course Objectives:

- To study about the integration of various renewable energy sources into the grid.
- To analyse various grid issues due to renewable energy sources.
- To analyse the dynamics of network due to wind farm
- To provide knowledge about power system stabilizers.

UNIT – I	INTRODUCTION	9
Introduction to renewable energy grid integration - Concept of mini/micro grids and Smart grids - Different types of grid interfaces - Issues related to grid integration of small and large scale of synchronous generator based - induction generator based and converter based sources together - Network voltage management - Power quality management (voltage dips, harmonics, flickers, and reactive power control) - Frequency management - Influence of WECS on system transient response - Interconnection standards and grid code requirements for integration.		
UNIT – II	NETWORK INFLUENCE OF GENERATION TYPE	9
starting – Network voltage management – Thermal/Active power management – Network power quality management – Transient system performance – Fault level issues – Protection.		
UNIT – III	INFLUENCE OF WIND FARMS ON NETWORK DYNAMIC PERFORMANCE	9
Dynamic Stability and its Assessment – Dynamic characteristics of Synchronous Generation - A Synchronizing power and Damping power model of a Synchronous Generator – Influence of Automatic Voltage Regulator on Damping – Influence on Damping of Generator Operating Conditions – Influence of Turbine Governor on Generator Operation – Transient Stability – Voltage Stability – Influence of		

HoD/BOS Chairman

Principal

Generation Type on Network Dynamic Stability – Dynamic Interaction of Wind Farms with the Network – influence of Wind Generation on Network Transient Performance		
UNIT – IV	POWER SYSTEM STABILIZERS AND NETWORK DAMPING CAPABILITY OF WIND	9
A Power System Stabilizer for a Synchronous Generator - A Power System Stabilizer for a DFIG - A Power System Stabilizer for a FRC Wind Farm.		
UNIT – V	STAND ALONE AND GRID CONNECTED PV SYSTEM	9
Solar modules – storage systems – Basics of batteries – Batteries for PV Systems – Charge Controllers – MPPT and Inverters – Power Conditioning and Regulation – protection – Types of Solar PV systems - standalone PV systems design – sizing – PV systems in buildings – design issues for central power stations – safety – Economic aspect – efficiency and performance – International PV programs		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Know about the integration of various renewable energy sources into the grid.
CO2	Able to analyze various grid issues due to renewable energy sources.
CO3	Able to analyze the dynamics of network due to windfarm
CO4	Know about power system stabilizers.
CO5	Able to design the grid connected and standalone PV system.

Average:	3	1	2	3	3	1

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
PX24012	RENEWABLE ENERGY TECHNOLOGY	PEC	3	0	0	3
Course Objectives:						
- Different types of renewable energy technologies - Standalone operation, grid connected operation of renewable energy systems						

UNIT – I	INTRODUCTION	9
Classification of energy sources – Co2 Emission - Features of Renewable energy - Renewable energy scenario in India -Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment Per Capital Consumption - CO2 Emission - importance of renewable energy sources, Potentials – Achievements– Applications.		
UNIT – II	SOLAR PHOTOVOLTAICS	9
Solar Energy: Sun and Earth-Basic Characteristics of solar radiation- angle of sunrays on solar collector-Estimating Solar Radiation Empirically - Equivalent circuit of PV Cell- Photovoltaic cell- characteristics: P-V and I-V curve of cell-Impact of Temperature and Insolation on I-V characteristics-Shading Impacts on I-V characteristics-Bypass diode - Blocking diode		
UNIT – III	PHOTOVOLTAIC SYSTEM DESIGN	9
Block diagram of solar photo voltaic system : Line commutated converters (inversion mode) - Boost and buck-boost converters - selection of inverter, battery sizing, array sizing - PV systems classification- standalone PV systems - Grid tied and grid interactive inverters- grid connection issues		
UNIT – IV	WIND ENERGY CONVERSION SYSTEMS	9
Origin of Winds: Global and Local Winds- Aerodynamics of Wind turbine-Derivation of Betz's limit- Power available in wind-Classification of wind turbine: Horizontal Axis wind turbine and Vertical axis wind turbine- Aerodynamic Efficiency-Tip Speed-Tip Speed Ratio-Solidity-Blade Count-Power curve of wind turbine - Configurations of wind energy conversion systems: Type A, Type B, Type C and Type D Configurations- Grid connection Issues - Grid integrated SCIG and PMSG based WECS.		
UNIT – V	OTHER RENEWABLE ENERGY SOURCES	9
Qualitative study of different renewable energy resources: ocean, Biomass, Hydrogen energy systems, Fuel cells, Ocean Thermal Energy Conversion (OTEC), Tidal and wave energy, Geothermal Energy Resources.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Demonstrate the need for renewable energy sources.
CO2	Develop a stand-alone photo voltaic system and implement a maximum power point tracking in the PV system.
CO3	Design a stand-alone and Grid connected PV system.
CO4	Analyze the different configurations of the wind energy conversion systems.
CO5	Realize the basic of various available renewable energy sources

Average:	3	-	2	2.6	2.6	2.2

Subject Code	Subject Name	Category	L	T	P	C
PX24013	WIND ENERGY CONVERSION SYSTEM	PEC	3	0	0	3

Course Objectives:

- To learn about the basic concepts of wind energy conversion system
- To learn the design and control principles of Wind turbine.
- To understand the concepts of fixed speed wind energy conversion systems.
- To understand the concepts of Variable speed wind energy conversion systems.
- To understand the grid integration issues.

UNIT – I	INTRODUCTION	9
Components of WECS-WECS schemes-Power obtained from wind-simple momentum theory- Power coefficient-Sabinin's theory-Aerodynamics of Wind turbine		
UNIT – II	WINDTURBINES	9
HAWT-VAWT-Power developed-Thrust-Efficiency-Rotor selection-Rotor design considerations- Tip speed ratio-No. Of Blades-Blade profile-Power Regulation-yaw control- Pitch angle control- stall control-Schemes for maximum power extraction.		
UNIT – III	FIXEDSPEEDSYSTEMS	9
Generating Systems- Constant speed constant frequency systems –Choice of Generators- Deciding factors-Synchronous Generator-Squirrel Cage Induction Generator- Model of Wind Speed- Model wind turbine rotor – Drive Train model- Generator model for Steady state and Transient stability analysis.		
UNIT – IV	VARIABLESPEED SYSTEMS	9
Need of variable speed systems-Power-wind speed characteristics-Variable speed constant frequency systems synchronous generator- DFIG- PMSG –Variable speed generators 53odeling – Variable speed variable frequency schemes.		

HoD/BOS Chairman

Principal

UNIT – V	GRIDCONNECTED SYSTEMS	9
Wind interconnection requirements, low-voltage ride through (LVRT), ramp rate limitations, and supply of ancillary services for frequency and voltage control, current practices and industry trends wind interconnection impact on steady-state and dynamic performance of the power system including modeling issue.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Attain knowledge on the basic concepts of Wind energy conversion system.
CO2	Attain the knowledge of the mathematical modeling and control of the Wind turbine
CO3	Develop more understanding on the design of Fixed speed system
CO4	Study about the need of Variable speed system and its modeling.
CO5	Learn about Grid integration issues and current practices of wind interconnections with power system.

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
PX24014	OPTIMIZATION TECHNIQUES	PEC	3	0	0	3

Course Objectives:
• To understand the classification of optimization
• To study the linear programming models and solution techniques
• To study the different non-linear programming problem solution techniques
• To understand the concept of dynamic programming
• To study the fundamentals genetic algorithm and its applications.

HoD/BOS Chairman

Principal

UNIT – I	INTRODUCTION	9
Definition, Classification of optimization problems, Classical Optimization Techniques, Single and Multiple Optimization with and without inequality constraints.		
UNIT – II	LINEAR PROGRAMMING (LP)	9
Simplex method of solving LPP, revised simplex method, duality, Constrained optimization, Theorems and procedure, Linear programming, mathematical model, solution technique, duality.		
UNIT – III	NON LINEAR PROGRAMMING	9
Steepest descent method, conjugates gradient method, Newton's Method, Sequential quadratic programming, Penalty function method, augmented Lagrange multiplier method.		
UNIT – IV	DYNAMIC PROGRAMMING (DP)	9
Multistage decision processes, concept of sub-optimization and principle of optimality, Recursive relations, Integer Linear programming, Branch and bound algorithm		
UNIT – V	GENETIC ALGORITHM	9
Introduction to genetic Algorithm, working principle, coding of variables, fitness function, GA operators; Similarities and differences between Gas and traditional methods; Unconstrained and constrained optimization using genetic Algorithm, real coded gas, Advanced Gas, global optimization using GA, Applications to power system.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	learn about different classifications of optimization problems and techniques
CO2	attain knowledge on linear programming concepts
CO3	understand the application of non-linear programming in optimization techniques
CO4	understand the fundamental concepts of dynamic programming
CO5	gain knowledge about Genetic algorithm and its application to power system optimization.

Subject Code	Subject Name	Category	L	T	P	C
PS24003	DISTRIBUTED GENERATION AND MICRO GRID	PEC	3	0	0	3

Course Objectives:

- To familiarize with the concept of Distributed Generation
- To expose the various distributed energy resources
- To focus on the planning and protection of Distributed Generation
- To study the concept of MicroGrid and to analyze the impact of MicroGrid
- To understand the major issues on MicroGrid economics

UNIT – I	INTRODUCTION TO DISTRIBUTED GENERATION	9
DG definition - Reasons for distributed generation-Benefits of integration - Distributed generation and the distribution system - Technical, Environmental and Economic impacts of distributed generation on the distribution system - Impact of distributed generation on the transmission system-Impact of distributed generation on central generation		
UNIT – II	DISTRIBUTED ENERGY RESOURCES	9
Combined heat and power (CHP) systems-Wind energy conversion systems (WECS)-Solar photovoltaic (PV) systems-Small-scale hydroelectric power generation-Other renewable energy sources-Storage devices-Inverter interfaces		
UNIT – III	DG PLANNING AND PROTECTION	9
Generation capacity adequacy in conventional thermal generation systems-Impact of distributed generation-Impact of distributed generation on network design-Protection of distributed generation- Protection of the generation equipment from internal Faults-Protection of the faulted distribution network from fault currents supplied by the distributed generator-Impact of distributed generation on existing distribution system protection.		
UNIT – IV	CONCEPT OF MICROGRID	9
Microgrid Definition-A typical Microgrid configuration- Functions of Micro source controller and central controller- Energy Management Module (EMM) and Protection Co-ordination Module (PCM)- Modes of Operation- Grid connected and islanded modes- Modelling of Microgrid- Microturbine Model- PV Solar Cell Model- Wind Turbine Model-Role of Microgrid in power market competition.		
UNIT – V	IMPACTS OF MICROGRID	9
Technical and economical advantages of Microgrid-Challenges and disadvantages of Microgrid development-Management and operational issues of a Microgrid- Impact on heat utilization-Impact on process optimization-Impact on market-Impact on environment-Impact on distribution system- Impact on communication standards and protocols. Microgrid economics-Main issues of Microgrid economics-Microgrids and traditional power system economics-Emerging economic issues in Microgrids-Economic issues between Microgrids and bulk power systems-Potential benefits of Microgrid economics.

Subject Code	Subject Name	Category	L	T	P	C
PS24004	ENERGY MANAGEMENT AND AUDITING	PEC	3	0	0	3

Course Objectives:						
- To study the concepts behind economic analysis and load management - To emphasize the energy management of various electrical equipment and metering - To illustrate the concept of energy management technologies						

UNIT – I	ENERGY SCENARIO	9
-----------------	------------------------	----------

HoD/BOS Chairman

Principal

Basics of Energy and its various forms - Conventional and non-conventional sources - Energy policy - Energy conservation act 2001, Amendments (India) in 2010 - Need for energy management- Designing and starting an energy management program - Energy managers and energy auditors - Roles and responsibilities of energy managers - Energy labelling and energy standards.

UNIT – II	ENERGY COST AND LOAD MANAGEMENT	9
------------------	--	----------

Important concepts in an economic analysis - Economic models-Time value of money- Utility rate structures- Cost of electricity-Loss evaluation- Load management: Demand control techniques- Utility monitoring and control system-HVAC and energy management-Economic justification.

UNIT – III	ENERGY MANAGEMENT	9
-------------------	--------------------------	----------

Demand side management (DSM)– DSM planning – DSM techniques – Load management as a DSM strategy – Energy conservation – Tariff options for DSM.

UNIT – IV	ENERGY AUDITING	9
------------------	------------------------	----------

Definition – Energy audit methodology: audit preparation, execution and reporting – Financial analysis – Sensitivity analysis – Project financing options - Instruments for energy audit – Energy audit for generation, distribution and utilization systems – Economic analysis.

UNIT – V	ENERGY EFFICIENT TECHNOLOGIES	9
-----------------	--------------------------------------	----------

Energy saving opportunities in electric motors - Power factor improvement benefit and techniques- Shunt capacitor, Synchronous Condenser and Phase Advancer - Energy conservation in industrial drives, electric furnaces, ovens and boilers - Lighting techniques: Natural, CFL, LED lighting sources and fittings..

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the present energy scenario and role of energy managers.
CO2	Comprehend the Economic Models for cost and load management.
CO3	Configure the Demand side energy management through its control techniques, strategy and planning
CO4	Understand the process of energy auditing
CO5	Implement energy conservation aspects in industries

Average:	2	2.4	2	2	2.25	2

Subject Code	SUBJECT NAME	Category	L	T	P	C
PS24005	SMART GRID	PEC	3	0	0	3

Course Objectives:

- To Study about Smart Grid technologies, different smart meters and advanced metering infrastructure.
- To know about the function of smart grid.
- To familiarize the power quality management issues in Smart Grid.
- To familiarize the high performance computing for Smart Grid applications
- To get familiarized with the communication networks for Smart Grid applications

UNIT – I	INTRODUCTION TO SMART GRID	9
Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, Comparison of Micro grid and Smart grid, Present development & International policies in Smart Grid, Smart Grid Initiative for Power Distribution Utility in India – Case Study.		
UNIT – II	SMART GRID TECHNOLOGIES	9
Technology Drivers, Smart Integration of energy resources, Smart substations, Substation Automation, Feeder Automation, Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/Var control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Plug in Hybrid Electric Vehicles (PHEV) – Grid to Vehicle and Vehicle to Grid charging concepts.		
UNIT – III	SMART METERS AND ADVANCED METERING INFRASTRUCTURE	9
Introduction to Smart Meters, Advanced Metering infrastructure (AMI) drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Phasor Measurement Unit(PMU) & their application for monitoring & protection. Demand side management and demand response programs, Demand pricing and Time of Use, Real Time Pricing, Peak Time Pricing.		
UNIT – IV	POWER QUALITY MANAGEMENT IN SMART GRID	9
Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.		
UNIT – V	HIGH PERFORMANCE COMPUTING FOR SMART GRID APPLICATIONS	9
Architecture and Standards -Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN), Broadband over Power line (BPL), PLC, Zigbee, GSM, IP based		

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Relate with the smart resources, smart meters and other smart devices.
CO2	Explain the function of Smart Grid.
CO3	Experiment the issues of Power Quality in Smart Grid.
CO4	Analyze the performance of Smart Grid.
CO5	Recommend suitable communication networks for smart grid applications

Average:	2.25	2	1.66	2	2.3	2

Subject Code	SUBJECT NAME	Category	L	T	P	C
PS24006	HVDC AND FACTS	PEC	3	0	0	3
Course Objectives:						
To emphasis the need for FACTS controller.						
To learn the characteristics ,applications and modelling of series and shunt FACTS controllers.						
To analyze the interaction of different FACTScontroller and perform control coordination						
To impart knowledge on operation,modelling and control of HVDC link						
To perform steady state analysis of AC/DC system.						

UNIT – I	INTRODUCTION	9
Review of basics of power transmission networks-control of power flow in AC transmission line- Analysis of uncompensated AC Transmission line- Passive reactive power compensation:Effect of series and shunt compensation at the mid-point of the line on power transfer-Need for FACTS controllers-types of FACTS controllers-Need for HVDC system-MTDC system- Review of basics of LCC and VSCHVDC system.Configurations-Monopolar Asymmetric and Symmetric MMC-HVDCScheme-Bipolar and Homopolar HVDC Scheme-Multi-Terminal HVDC Configuration-Layout of HVDC system(LCC,VSC)		
UNIT – II	THYRISTOR BASED FACTS CONTROLLERS	9
Configuration of SVC- voltage regulation by SVC- Modelling of SVC for power flow analysis- Stability studies- Applications: transient stability enhancement and power oscillation dampingof SMIB system with SVC connected at the mid-point of the line- Concepts of Controlled Series Compensation–OperationofTCSC-AnalysisofTCSC–ModellingofTCSCforpowerflow and stability studies.		
UNIT – III	ANALYSIS OF LCC HVDC CONVERTERS AND HVDC SYSTEM CONTROL	9
Choice of converter configuration – Simplified analysis of Graetz circuit Converter bridge characteristics – characteristics of a twelve-pulse converter- detailed analysis of converters. General principles of DC link control – Converter control characteristics – System control hierarchy - Firing angle control – Current and extinction angle control – Generation of harmonics and filtering - power control – Higher level controllers. Modelling of LCC HVDC system and controllers, transformer derating and core saturation instability, Concepts of Power Oscillation Damping Controller, Frequency Controller and Sub synchronous Damping controller in LCC HVDC.		
UNIT – IV	VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS	9
Static synchronous compensator (STATCOM)-Static synchronous series compensator (SSSC) Operation of STATCOM and SSSC-Power flow control with STATCOM and SSSC- Modelling of STATCOM and SSSC for power flow and transient stability studies –operation of Unified and Interline power flow controllers (UPFC) - Modelling of UPFC and IPFC for power flow and transient stability studies-Concepts of Power Oscillation Damping using FACTS controllers		
UNIT – V	VOLTAGE SOURCE CONVERTER BASED HVDC SYSTEM AND CONTROL	9
Applications VSC based HVDC:Operation,Modelling for steady state and dynamic studies,Introduction to Modular Multilevel converters- Main circuit design-Converter Operating Principle and Averaged Dynamic Model- Per-Phase Output-Current Control - Arm-Balancing (Internal) Control- Vector Output-Current Control-Higher-Level Control- Modulation and Submodule Energy Balancing- Offshore HVDC integration System Studies -Control and Protection of MMC-HVDC under AC and DC Network Fault Contingencies- Modeling and Simulation of MMC based MTDC Simulation exercises, Steady state, Fault recovery characteristics - Solution of DC load flow-Solution of AC-DC power flow: Sequential and Simultaneous methods.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Learners will be able to refresh on basics of power transmission networks and need for FACTS controllers

HoD/BOS Chairman

Principal

CO2	Ability to design series and shunt compensating devices for power transfer enhancement
CO3	Learners will understand the significance about different voltage source converter based FACTS controllers
CO4	Learners will attain knowledge on AC/DC system coordinated control with FACTS and HVDC link
CO5	Learners will be capable to explore the MMC converter applications FACTS and MTDC system

Subject Code	SUBJECT NAME	Category	L	T	P	C
ET24005	PYTHON PROGRAMMING FOR MACHINE LEARNING	PEC	3	0	0	3

Course Objectives:

- Students will understand and be able to use the basic programming principles such as data types, variable, conditionals, loops, recursion and function calls.
- Students will learn how to use basic data structures such as List, Dictionary and be able to manipulate text files and images.
- To make the students familiar with machine learning concepts & techniques.
- Students will understand the process and will acquire skills necessary to effectively attempt a machine learning problem and implement it using Python.
- To involve Discussion / Practice / Exercise on to revising & familiarizing the concepts acquired over the 5 Units of the subject for improved research / employability skills

HoD/BOS Chairman

Principal

UNIT – I	INTRODUCTION TO MACHINE LEARNING AND PYTHON	9
Introduction to Machine Learning : Significance, Advantage and Applications–Categories of Machine Learning–Basic Steps in Machine Learning: Raw Data Collection, Pre-processing, Training a Model, Evaluation of Model, Performance Improvement Introduction to Python and its significance – Difference between C, C++ and Python Languages; Compiler and Interpreters – Python3 Installation& Running – Basics of Python Programming Syntax: Variable Types, Basic Operators ,Reading Input from User– Arrays/List, Dictionary and Set – Conditional Statements – Control Flow and loop control statements		
UNIT – II	PYTHON FUNCTIONS AND PACKAGES	9
File Handling: Reading and Writing Data–Errors and Exceptions Handling–Functions& Modules –Package Handling in Python–Pip Installation & Exploring Functions in python package– Installing the Numpy Library and exploring various operations on Arrays: Indexing, Slicing, Multi- Dimensional Arrays, Joining Numpy Arrays, Array intersection and Difference, Saving and Loading Numpy Arrays – Introduction to SciPy Package& its functions - Introduction to Object Oriented Programming with Python.		
UNIT – III	IMPLEMENTATION OF MACHINE LEARNING USING PYTHON	9
Description of Standard Datasets: Coco, ImageNet, MNIST (Handwritten Digits) Dataset, Boston Housing Dataset – Introducing the concepts of Regression – Linear, Polynomial& Logistic Regression with analytical understanding - Introduction to SciPy Package& its functions – Python Application of Linear Regression and Polynomial Regression using SciPy–Interpolation, Over fitting and Under fitting concepts & examples using SciPy.		
UNIT – IV	CLASSIFICATION AND CLUSTERING CONCEPTS OF ML	9
Introduction to ML Concepts of Clustering and Classification – Types of Classification Algorithms – Support Vector Machines (SVM) - Decision Tree - Random Forest – Introduction to ML using scikit- learn – Using scikit-learn, Loading a sample dataset, Learning& prediction, interpolation& fitting, Multiclass fitting - Implementation of SVM using Blood Cancer Dataset, Decision Tree using data from csv. Types of Clustering Algorithms & Techniques–K-means Algorithm, Mean Shift Algorithm& Hierarchical Clustering Algorithm – Introduction to Python Visualization using Matplot lib: Plotting 2- dimensional,3-dimensional graphs; formatting axis values; plotting multiple rows of data in same graph–Implementation of K-means Algorithm and Mean Shift Algorithm using Python.		
UNIT – V	INTRODUCTION TO NEURAL NETWORKS AND EMBEDDED MACHINE LEARNING	9
Neural Network Architecture – Single Layer Perceptron& Multi-Layer Perceptron (MLP) – Commonly Used Activation Functions - Forward Propagation, Back Propagation, and Epochs – Gradient Descent – Introduction to Tensor flow and Keras ML Python packages– Implementation of MLP Neural Network on Iris Dataset– Introduction to Convolution Neural Networks – Implementation of Digit Classification using MNIST Data set ML for Embedded Systems: Comparison with conventional ML–Challenges & Methods for Overcoming – Tiny ML and Tensor flow Lite for Microcontrollers – on-Board AI – ML Edge Devices: Arduino Nano BLESense ,Google Edge TPU and Intel Movidius.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Develop skill in system administration and network programming by learning Python.
CO2	Demonstrating understanding in concepts of Machine Learning and its implementation using Python

HoD/BOS Chairman

Principal

CO3	Relate to use Python's highly powerful processing capabilities for primitives, modelling etc
CO4	Improved Employability and entrepreneurship capacity due to knowledge upgradation of recent trends in embedded systems design.
CO5	Apply the concepts acquired over the advanced research/employability skills

AUDIT COURSES

Subject Code	Subject Name	Category	L	T	P	C
AX24001	ENGLISH FOR RESEARCH PAPER WRITING	-	2	0	0	0

Course Objectives:

• Teach how to improve writing skills and level of readability
• Tell about what to write in each section
• Summarize the skills needed when writing a Title
• Infer the skills needed when writing the Conclusion
• Ensure the quality of paper at very first-time submission

UNIT – I	INTRODUCTION TO RESEARCH PAPER WRITING	6
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness		
UNIT – II	PRESENTATION SKILLS	6
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction		
UNIT – III	TITLE WRITING SKILLS	6

HoD/BOS Chairman

Principal

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check	
UNIT – IV	RESULT WRITING SKILLS
Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions	
UNIT – V	VERIFICATION SKILLS
Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first- time submission	
Total Contact Hours : 30	

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand that how to improve your writing skills and level of readability
CO2	Learn about what to write in each section
CO3	Understand the skills needed when writing a Title
CO4	Understand the skills needed when writing the Conclusion
CO5	Ensure the good quality of paper at very first-time submission

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
AX24002	DISASTER MANAGEMENT	-	2	0	0	0
Course Objectives:						
- Summarize basics of disaster - Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response - Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives						

HoD/BOS Chairman

Principal

• Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations
• Develop the strengths and weaknesses of disaster management approaches

UNIT – I	INTRODUCTION	6
Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude		
UNIT – II	REPERCUSSIONS OF DISASTERS AND HAZARDS	6
Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.		
UNIT – III	DISASTER PRONE AREAS IN INDIA	6
Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics		
UNIT – IV	DISASTER PREPAREDNESS AND MANAGEMENT	6
Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness.		
UNIT – V	RISK ASSESSMENT	6
Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival		
		Total Contact Hours : 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Ability to summarize basics of disaster
CO2	Ability to explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
CO3	Ability to illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives
CO4	Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO5	Ability to develop the strengths and weaknesses of disaster management approaches

Subject Code	Subject Name	Category	L	T	P	C
AX24003	CONSTITUTION OF INDIA	-	2	0	0	0

Course Objectives:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

UNIT – I	HISTORY OF MAKING OF THE INDIAN CONSTITUTION	6
History, Drafting Committee, (Composition & Working)		
UNIT – II	PHILOSOPHY OF THE INDIAN CONSTITUTION	6
Preamble, Salient Features		
UNIT – III	CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES	6
Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.		
UNIT – IV	ORGANS OF GOVERNANCE	6
Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions		
UNIT – V	LOCAL ADMINISTRATION	6
District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy(Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy		
		Total Contact Hours : 30

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualization
CO3	of social reforms leading to revolution in India
CO4	Discuss the circumstances surrounding the foundation of the Congress Socialist Party[CSP] under the leadership of Jawaharlal Nehru and the

HoD/BOS Chairman

Principal

	eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
CO5	Discuss the passage of the Hindu Code Bill of 1956.

OPEN ELECTIVES

Subject Code	Subject Name	Category	L	T	P	C
OCE24001	INTEGRATED WATER RESOURCES MANAGEMENT	OEC	3	0	0	3

Course Objectives:

- To introduce students to the fundamental concepts and principles of Integrated Water Resources Management (IWRM).
- To explore the economic aspects of water resources management, including cost-benefit analysis and resource allocation.
- To examine the role of public-private partnerships in effective water governance and infrastructure development.
- To analyze the interconnections between water and key sectors such as health and food security.
- To familiarize students with legal and regulatory frameworks relevant to water management at national and international levels.

UNIT – I	CONTEXT FOR IWRM	9
Water as a global issue: key challenges – Definition of IWRM within the broader context of development – Key elements of IWRM - Principles – Paradigm shift in water management - Complexity of the IWRM process – UN World Water Assessment - SDGs.		
UNIT – II	WATER ECONOMICS	9
Economic view of water issues: economic characteristics of water good and services – Nonmarket monetary valuation methods – Water economic instruments – Private sector involvement in water resources management: PPP objectives, PPP models, PPP processes, PPP experiences through case studies		

HoD/BOS Chairman

Principal

UNIT – III	LEGAL AND REGULATORY SETTINGS	9
Basic notion of law and governance: principles of international and national law in the area of water management - Understanding UN law on non-navigable uses of international water courses – International law for groundwater management – World Water Forums – Global Water Partnerships - Development of IWRM in line with legal and regulatory framework.		
UNIT – IV	WATER AND HEALTH WITHIN THE IWRM CONTEXT	9
Links between water and health: options to include water management interventions for health – Health protection and promotion in the context of IWRM – Global burden of Diseases - Health impact assessment of water resources development projects – Case studies		
UNIT – V	AGRICULTURE IN THE CONCEPT OF IWRM	9
Water for food production: ‘blue’ versus ‘green’ water debate – Water foot print - Virtual water trade for achieving global water and food security – Irrigation efficiencies, irrigation methods - current water pricing policy– scope to relook pricing.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Describe the context and principles of IWRM; Compare the conventional and integrated ways of water management.
CO2	Select the best economic option among the alternatives; illustrate the pros and cons of PPP through case studies.
CO3	Apply law and governance in the context of IWRM.
CO4	Discuss the linkages between water-health; develop a HIA framework.
CO5	Analyse how the virtual water concept pave way to alternate policy options.

OCE24002	WATER, SANITATION AND HEALTH	OEC	3	0	0	3

Course Objectives:

- To understand the current challenges and managerial practices in the water and sanitation sectors.
- To explore the linkages between water management and public health outcomes in developing regions.
- To analyze the effectiveness of existing health and sanitation initiatives in addressing waterborne diseases.
- To evaluate the impact of inadequate water and sanitation infrastructure on community health.
- To identify sustainable strategies and policy interventions to improve water, sanitation, and health outcomes in emerging economies.

UNIT – I	FUNDAMENTALS WASH	9
Meanings and Definition: Safe Water- Health, Nexus: Water- Sanitation - Health and Hygiene – Equity issues-Water security - Food Security. Sanitation And Hygiene (WASH) and Integrated Water Resources Management (IWRM) - Need and Importance of WASH		
UNIT – II	MANAGERIAL IMPLICATIONS AND IMPACT	9
Third World Scenario – Poor and Multidimensional Deprivation--Health Burden in Developing Scenario -Factors contribute to water, sanitation and hygiene related diseases- Social: Social Stratification and Literacy Demography: Population and Migration- Fertility – MortalityEnvironment: Water Borne-Water Washed and Water Based Diseases - Economic: Wage - Water and Health Budgeting -Psychological: Non-compliance - Disease Relapse - Political: Political Will		
UNIT – III	CHALLENGES IN MANAGEMENT AND DEVELOPMENT	9
Common Challenges in WASH - Bureaucracy and Users- Water Utilities -Sectoral Allocation:- Infrastructure- Service Delivery: Health services: Macro and Micro- level: Community and Gender Issues- Equity Issues - Paradigm Shift: Democratization of Reforms and Initiatives.		
UNIT – IV	GOVERNANCE	9
Public health -Community Health Assessment and Improvement Planning (CHA/CHIP)- Infrastructure and Investments on Water, (WASH) - Cost Benefit Analysis – Institutional Intervention-Public Private Partnership - Policy Directives - Social Insurance -Political Will vs Participatory Governance		
UNIT – V	INITIATIVES	9
Management vs Development -Accelerating Development- Development Indicators -Inclusive Development-Global and Local- Millennium Development Goal (MDG) and Targets - Five Year Plans - Implementation - Capacity Building - Case studies on WASH.		
		Total Contact Hours : 45

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Capture to fundamental concepts and terms which are to be applied and understood all through the study
CO2	Comprehend the various factors affecting water sanitation and health through the lens of third world scenario
CO3	Critically analyse and articulate the underlying common challenges in water, sanitation and health.
CO4	Acquire knowledge on the attributes of governance and its say on water sanitation and health.
CO5	Gain an overarching insight in to the aspects of sustainable resource management in the absence of a clear level playing field in the developmental aspects

Course Objectives:						
- To introduce the key environmental, social, and economic dimensions of sustainability. - To examine the evolution of sustainability principles through major global landmark events and summits. - To analyze the interrelationship between sustainable development goals (SDGs) and						

HoD/BOS Chairman

Principal

global development challenges.
To promote critical thinking about current unsustainable practices and their long-term impacts.
To cultivate an action-oriented mindset toward sustainable development through policy, innovation, and behavioral change.

UNIT – I	SUSTAINABILITY AND DEVELOPMENT CHALLENGES	9
Definition of sustainability – environmental, economical and social dimensions of sustainability - sustainable development models – strong and weak sustainability – defining development millennium development goals – mindsets for sustainability: earthly, analytical, precautionary, action and collaborative– syndromes of global change: utilisation syndromes, development syndromes, and sink syndromes – core problems and cross cutting Issues of the 21 century - global, regional and local environmental issues – social insecurity - resource degradation – climate change – desertification.		
UNIT – II	PRINCIPLES AND FRAME WORK	9
History and emergence of the concept of sustainable development - our common future - Stockholm to Rio plus 20– Rio Principles of sustainable development – Agenda 21 natural step peoples earth charter – business charter for sustainable development –UN Global Compact - Role of civil society, business and government – United Nations’ 2030 Agenda for sustainable development – 17 sustainable development goals and targets, indicators and intervention areas		
UNIT – III	SUSTAINABLE DEVELOPMENT AND WELLBEING	9
The Unjust World and inequities - Quality of Life - Poverty, Population and Pollution - Combating Poverty - - Demographic dynamics of sustainability - Strategies to end Rural and Urban Poverty and Hunger – Sustainable Livelihood Framework- Health, Education and Empowerment of Women, Children, Youth, Indigenous People, Non-Governmental Organizations, Local Authorities and Industry for Prevention, Precaution , Preservation and Public participation.		
UNIT – IV	SUSTAINABLE SOCIO-ECONOMIC SYSTEMS	9
Sustainable Development Goals and Linkage to Sustainable Consumption and Production – Investing in Natural Capital- Agriculture, Forests, Fisheries - Food security and nutrition and sustainable agriculture- Water and sanitation - Biodiversity conservation and Ecosystem integrity –Ecotourism - Sustainable Cities – Sustainable Habitats- Green Buildings - Sustainable Transportation — Sustainable Mining - Sustainable Energy– Climate Change – Mitigation and Adaptation - Safeguarding Marine Resources - Financial Resources and Mechanisms		
UNIT – V	ASSESSING PROGRESS AND WAY FORWARD	9
Nature of sustainable development strategies and current practice- Sustainability in global, regional and national context –Approaches to measuring and analysing sustainability– limitations of GDP- Ecological Footprint- Human Development Index- Human Development Report – National initiatives for Sustainable Development - Hurdles to Sustainability - Science and Technology for sustainable development –Performance indicators of sustainability and Assessment mechanism – Inclusive Green Growth and Green Economy – National Sustainable Development Strategy Planning and National Status of Sustainable Development Goals		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Explain and evaluate current challenges to sustainability, including modern world social, environmental, and economic structures and crises.

HoD/BOS Chairman

Principal

CO2	Identify and critically analyze the social environmental, and economic dimensions of sustainability in terms of UN Sustainable development goals
CO3	Develop a fair understanding of the social, economic and ecological linkage of Human well being, production and consumption
CO4	Evaluate sustainability issues and solutions using a holistic approach that focuses on connections between complex human and natural systems.
CO5	Integrate knowledge from multiple sources and perspectives to understand environmental limits governing human societies and economies and social justice dimensions of sustainability

Subject Code	Subject Name	Category	L	T	P	C
OCE24004	ENVIRONMENTAL IMPACT ASSESSMENT	OEC	3	0	0	3

Course Objectives:

To introduce the concept and purpose of Environmental Clearance and its legal and regulatory framework.
To familiarize students with the step-by-step methodology of conducting an Environmental Impact Assessment (EIA).
To provide knowledge on various environmental prediction tools and modeling techniques used in EIA.
To develop understanding of how to formulate and implement an effective

HoD/BOS Chairman

Principal

Environmental Management Plan (EMP).
To analyze real-world case studies to understand the practical application and challenges of EIA in various sectors.

UNIT – I	INTRODUCTION	9
Historical development of Environmental Impact Assessment (EIA). Environmental Clearance EIA in project cycle. legal and regulatory aspects in India – types and limitations of EIA –EIA process- screening – scoping - terms of reference in EIA- setting – analysis – mitigation. Cross sectoral issues –public hearing in EIA- EIA consultant accreditation.		
UNIT – II	IMPACT IDENTIFICATION AND PREDICTION	9
Matrices – networks – checklists – cost benefit analysis – analysis of alternatives – expert systems in EIA. prediction tools for EIA – mathematical modeling for impact prediction – assessment of impacts – air – water – soil – noise – biological – cumulative impact assessment		
UNIT – III	SOCIO-ECONOMIC IMPACT ASSESSMENT	9
Socio-economic impact assessment - relationship between social impacts and change in community and institutional arrangements. factors and methodologies- individual and family level impacts. communities in transition-rehabilitation		
UNIT – IV	EIA DOCUMENTATION AND ENVIRONMENTAL MANAGEMENT PLAN	9
Environmental management plan - preparation, implementation and review – mitigation and rehabilitation plans – policy and guidelines for planning and monitoring programmes – post project audit – documentation of EIA findings – ethical and quality aspects of environmental impact assessment		
UNIT – V	CASE STUDIES	9
Mining, power plants, cement plants, highways, petroleum refining industry, storage & handling of hazardous chemicals, common hazardous waste facilities, CETPs, CMSWMF, building and construction project		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand need for environmental clearance, its legal procedure, need of EIA, its types, stakeholders and their role
CO2	Understand various impact identification methodologies, prediction techniques and model of impacts on various environments
CO3	Understand relationship between social impacts and change in community due to development activities and rehabilitation methods
CO4	Document the EIA findings and prepare environmental management and monitoring plan
CO5	Identify, predict and assess impacts of similar projects based on case studies

Average:	3	2	3	2	2	2

Subject Code	Subject Name	Category	L	T	P	C
OME24001	VIBRATION AND NOISE CONTROL STRATEGIES	OEC	3	0	0	3

Course Objectives:

- To appreciate the basic concepts of vibration in damped and undamped systems
- To appreciate the basic concepts of noise, its effect on hearing and related terminology
- To use the instruments for measuring and analyzing the vibration levels in a body
- To use the instruments for measuring and analyzing the noise levels in a system
- To learn the standards of vibration and noise levels and their control techniques

UNIT – I	BASICS OF VIBRATION	9
Introduction – Sources and causes of Vibration-Mathematical Models - Displacement, velocity and Acceleration - Classification of vibration: free and forced vibration, undamped and damped vibration, linear and non-linear vibration - Single Degree Freedom Systems - Vibration isolation - Determination of natural frequencies		
UNIT – II	BASICS OF NOISE	9
Introduction - Anatomy of human ear - Mechanism of hearing - Amplitude, frequency, wavelength and sound pressure level - Relationship between sound power, sound intensity and sound pressure level - Addition, subtraction and averaging decibel levels - sound spectra - Types of sound fields - Octave band analysis - Loudness.		
UNIT – III	INSTRUMENTATION FOR VIBRATION MEASUREMENT	9
Experimental Methods in Vibration Analysis.- Vibration Measuring Instruments - Selection of Sensors - Accelerometer Mountings - Vibration Exciters - Mechanical, Hydraulic, Electromagnetic and Electrodynamics – Frequency Measuring Instruments -. System Identification from Frequency Response -Testing for resonance and mode shapes		
UNIT – IV	INSTRUMENTATION FOR NOISE MEASUREMENT AND ANALYSIS	9
Microphones - Weighting networks - Sound Level meters, its classes and calibration - Noise measurements using sound level meters - Data Loggers - Sound exposure meters - Recording of noise - Spectrum analyser - Intensity meters - Energy density sensors - Sound source localization.		
UNIT – V	METHODS OF VIBRATION CONTROL, SOURCES OF NOISE	9

 HoD/BOS Chairman

 Principal

AND ITS CONTROL	
Specification of Vibration Limits – Vibration severity standards - Vibration as condition Monitoring Tool – Case Studies - Vibration Isolation methods - Dynamic Vibration Absorber – Need for Balancing - Static and Dynamic Balancing machines – Field balancing - Major sources of noise - Noise survey techniques – Measurement technique for vehicular noise - Road vehicles Noise standard – Noise due to construction equipment and domestic appliances – Industrial noise sources and its strategies – Noise control at the source – Noise control along the path – Acoustic Barriers – Noise control at the receiver -- Sound transmission through barriers – Noise reduction Vs Transmission loss - Enclosures	
	Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Apply the basic concepts of vibration in damped and undamped systems
CO2	Apply the basic concepts of noise and to understand its effects on systems
CO3	Select the instruments required for vibration measurement and its analysis
CO4	Select the instruments required for noise measurement and its analysis.
CO5	Recognize the noise sources and to control the vibration levels in a body and to control noise under different strategies.

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
OME24002	ENERGY CONSERVATION AND MANAGEMENT IN DOMESTIC SECTORS	OEC	3	0	0	3

COURSE OBJECTIVES

- To learn the present energy scenario and the need for energy conservation.
- To understand the different measures for energy conservation in utilities.
- Acquaint students with principle theories, materials, and construction techniques to create energy efficient buildings.
- To identify the energy demand and bridge the gap with suitable technology for sustainable habitat
- To get familiar with the energy technology, current status of research and find the ways to optimize a system as per the user requirement

UNIT – I	ENERGY SCENARIO	9
Primary energy resources - Sectorial energy consumption (domestic, industrial and other sectors), Energy pricing, Energy conservation and its importance, Energy Conservation Act-2001 and its features – Energy star rating.		
UNIT – II	HEATING, VENTILLATION & AIR CONDITIONING	9
Basics of Refrigeration and Air Conditioning – COP / EER / SEC Evaluation – SPV system design & optimization for Solar Refrigeration.		
UNIT – III	LIGHTING, COMPUTER, TV	9
Specification of Luminaries – Types – Efficacy – Selection & Application – Time Sensors – Occupancy Sensors – Energy conservation measures in computer – Television – Electronic devices.		
UNIT – IV	ENERGY EFFICIENT BUILDINGS	9
Conventional versus Energy efficient buildings – Landscape design – Envelope heat loss and heat gain – Passive cooling and heating – Renewable sources integration.		
UNIT – V	ENERGY STORAGE TECHNOLOGIES	9
Necessity & types of energy storage – Thermal energy storage – Battery energy storage, charging and discharging– Hydrogen energy storage & Super capacitors – energy density and safety issues – Applications.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand technical aspects of energy conservation scenario.
CO2	Energy audit in any type for domestic buildings and suggest the conservation measures.
CO3	Perform building load estimates and design the energy efficient landscape system.
CO4	Gain knowledge to utilize an appliance/device sustainably.
CO5	Understand the status and current technological advancement in energy storage field.

OBA24002	MICRO AND SMALL BUSINESS MANAGEMENT	OEC	3	0	0	3

Course Objectives:
- To familiarize students with the fundamental theories and principles of small business management. - To explore the key components of planning, organizing, financing, and operating a small business. - To understand the legal and regulatory frameworks affecting small businesses. - To analyze the impact of legal issues on small business operations and decision-

HoD/BOS Chairman

Principal

making.
To encourage entrepreneurial thinking by examining case studies and real-world practices in small business environments.

UNIT – I	INTRODUCTION TO SMALL BUSINESS	9
Creation, Innovation, entrepreneurship and small business - Defining Small Business –Role of Owner – Manager – government policy towards small business sector –elements of entrepreneurship –evolution of entrepreneurship –Types of Entrepreneurship – social, civic, corporate - Business life cycle - barriers and triggers to new venture creation – process to assist start ups – small business and family business		
UNIT – II	SCREENING THE BUSINESS OPPORTUNITY AND FORMULATING THE BUSINESS PLAN	9
Concepts of opportunity recognition; Key factors leading to new venture failure; New venture screening process; Applying new venture screening process to the early stage small firm Role planning in small business – importance of strategy formulation – management skills for small business creation and development.		
UNIT – III	BUILDING THE RIGHT TEAM AND MARKETING STRATEGY	9
Management and Leadership – employee assessments – Tuckman’s stages of group development - The entrepreneurial process model - Delegation and team building - Comparison of HR management in small and large firms - Importance of coaching and how to apply a coaching model. Marketing within the small business - success strategies for small business marketing - customer delight and business generating systems, - market research, - assessing market performance- sales management and strategy - the marketing mix and marketing strategy		
UNIT – IV	FINANCING SMALL BUSINESS	9
Main sources of entrepreneurial capital; Nature of ‘bootstrap’ financing - Difference between cash and profit - Nature of bank financing and equity financing - Funding-equity gap for small firms. Importance of working capital cycle - Calculation of break-even point - Power of gross profit margin- Pricing for profit - .Credit policy issues and relating these to cash flow management and profitability		
UNIT – V	VALUING SMALL BUSINESS AND CRISIS MANAGEMENT	9
Causes of small business failure - Danger signals of impending trouble - Characteristics of poorly performing firms - Turnaround strategies - Concept of business valuation - Different valuation measurements - Nature of goodwill and how to measure it - Advantages and disadvantages of buying an established small firm - Process of preparing a business for sale		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Familiarise the students with the concept of small business
CO2	In depth knowledge on small business opportunities and challenges
CO3	Ability to devise plans for small business by building the right skills and marketing strategies
CO4	Identify the funding source for small start ups
CO5	Business evaluation for buying and selling of small firms

Textbooks:

CO5	3	2	2	3	2	1
Average:	3	2	2	2	2	2

Subject Code	Subject Name	Category	L	T	P	C
OBA24003	INTELLECTUAL PROPERTY RIGHTS	OEC	3	0	0	3

Course Objectives:

- To provide foundational knowledge of Intellectual Property Rights (IPR), including types such as patents, trademarks, copyrights, and trade secrets.
- To understand the legal and procedural aspects of acquiring and protecting intellectual property.
- To explore national and international frameworks governing IPR, including treaties, conventions, and organizations like WIPO.
- To examine case studies to understand the strategic use and enforcement of IPR in various industries.
- To introduce the concept of IPR valuation and its role in commercialization, licensing, and competitive advantage.

UNIT – I	INTRODUCTION	9
Intellectual property rights - Introduction, Basic concepts, Patents, Copyrights, Trademarks, Trade Secrets, Geographic Indicators; Nature of Intellectual Property, Technological Research, Inventions and Innovations, History - the way from WTO to WIPO, TRIPS		
UNIT – II	PROCESS	9
New Developments in IPR, Procedure for grant of Patents, TM, GIs, Patenting under Patent Cooperation Treaty, Administration of Patent system in India, Patenting in foreign countries		
UNIT – III	STATUTES	9
International Treaties and conventions on IPRs, The TRIPs Agreement, PCT Agreement, The Patent Act of India, Patent Amendment Act (2005), Design Act, Trademark Act, Geographical Indication Act, Bayh- Dole Act and Issues of Academic Entrepreneurship.		
UNIT – IV	STRATEGIES IN INTELLECTUAL PROPERTY	9
Strategies for investing in R&D, Patent Information and databases, IPR strength in India, Traditional Knowledge, Case studies		
UNIT – V	MODELS	9
The technologies Know-how, concept of ownership, Significance of IP in Value Creation, IP Valuation and IP Valuation Models, Application of Real Option Model in Strategic Decision		

HoD/BOS Chairman

Principal

Making, Transfer and Licensing.	
	Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understanding of intellectual property and appreciation of the need to protect it
CO2	Understanding of the statutes related to IPRAwareness about the process of patenting
CO3	Ability to apply strategies to protect intellectual property
CO4	Ability to apply models for making strategic decisions related to IPR
CO5	Awareness about the process of patenting

Average:	3	3	3	3	2	3

Subject Code	Subject Name	Category	L	T	P	C
OBA24004	ETHICAL MANAGEMENT	OEC	3	0	0	3
Course Objectives:						
To introduce the fundamental concepts and theories of ethics as they apply to business and management.						
To help students recognize ethical issues and dilemmas in organizational settings and evaluate them from multiple ethical perspectives.						
To develop students' ability to apply ethical principles in real-world managerial decision-making processes.						
To explore the role of corporate social responsibility (CSR) and ethical leadership in sustainable organizational success.						
To encourage critical thinking and reflective skills necessary for making responsible and value-based decisions in complex business environments.						

HoD/BOS Chairman

Principal

UNIT – I	ETHICS AND SOCIETY	9
Ethical Management- Definition, Motivation, Advantages-Practical implications of ethical management. Managerial ethics, professional ethics, and social Responsibility-Role of culture and society's expectations- Individual and organizational responsibility to society and the community		
UNIT – II	ETHICAL DECISION MAKING AND MANAGEMENT IN A CRISIS	9
Managing in an ethical crisis, the nature of a crisis, ethics in crisis management, discuss case studies, analyze real-world scenarios, develop ethical management skills, knowledge, and competencies. Proactive crisis management		
UNIT – III	STAKEHOLDERS IN ETHICAL MANAGEMENT	9
Stakeholders in ethical management, identifying internal and external stakeholders, nature of stakeholders, ethical management of various kinds of stakeholders: customers (product and service issues), employees (leadership, fairness, justice, diversity) suppliers, collaborators, business, community, the natural environment (the sustainability imperative, green management, Contemporary issues).		
UNIT – IV	INDIVIDUAL VARIABLES IN ETHICAL MANAGEMENT	9
Understanding individual variables in ethics, managerial ethics, concepts in ethical psychologyethical awareness, ethical courage, ethical judgment, ethical foundations, ethical emotions/intuitions/intensity. Utilization of these concepts and competencies for ethical decisionmaking and management.		
UNIT – V	PRACTICAL FIELD-GUIDE, TECHNIQUES AND SKILLS	9
Ethical management in practice, development of techniques and skills, navigating challenges and dilemmas, resolving issues and preventing unethical management proactively. Role modelling and creating a culture of ethical management and human flourishing.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Role modelling and influencing the ethical and cultural context.
CO2	Respond to ethical crises and proactively address potential crises situations.
CO3	: Understand and implement stakeholder management decisions.
CO4	Develop the ability, knowledge, and skills for ethical management
CO5	Develop practical skills to navigate, resolve and thrive in management situations

Textbooks:

Average:	3	3	3	3	2	3

Subject Code	Subject Name	Category	L	T	P	C
CP24007	SECURITY PRACTICES	OEC	3	0	0	3

Course Objectives:

- To gain a basic knowledge of system security
- To gain a basic knowledge of network security
- To know the fund medal knowledge about security management
- To obtain knowledge about cyber security and cloud security
- To gain basic knowledge about privacy and storage security

UNIT – I	SYSTEM SECURITY	9
Model of network security – Security attacks, services and mechanisms – OSI security architecture -A Cryptography primer- Intrusion detection system- Intrusion Prevention system - Security web applications- Case study: OWASP - Top 10 Web Application Security Risks		
UNIT – II	NETWORK SECURITY	9
Internet Security - Intranet security- Local Area Network Security - Wireless Network Security - Wireless Sensor Network Security- Cellular Network Security - Mobile security - IOT security - Case Study - Kali Linux		
UNIT – III	SECURITY MANAGEMENT	9
Information security essentials for IT Managers- Security Management System - Policy Driven System Management- IT Security - Online Identity and User Management System. Case study: Metasplo		
UNIT – IV	CYBER SECURITY AND CLOUD SECURITY	9
Cyber Forensics- Disk Forensics – Network Forensics – Wireless Forensics – Database Forensics – Malware Forensics – Mobile Forensics – Email Forensics- Best security practices for automate Cloud infrastructure management – Establishing trust in IaaS, PaaS, and SaaS Cloud types. Case study: DVWA		
UNIT – V	PRIVACY AND STORAGE SECURITY	9
Privacy on the Internet - Privacy Enhancing Technologies - Personal privacy Policies - Detection of Conflicts in security policies- privacy and security in environment monitoring systems. Storage Area Network Security - Storage Area Network Security Devices - Risk management - Physical Security Essentials		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the core fundamentals of system security
CO2	Apply the security concepts to wired and wireless networks
CO3	Implement and Manage the security essentials in IT Sector
CO4	Explain the concepts of Cyber Security and Cyber forensics
CO5	Be aware of Privacy and Storage security Issues.

Subject Code	Subject Name	Category	L	T	P	C
MP24002	CLOUD COMPUTING TECHNOLOGIES	OEC	3	0	0	3
Course Objectives:						
To gain expertise in Virtualization, Virtual Machines and deploy practical virtualization solution						
To understand the architecture, infrastructure and delivery models of cloud computing						
To explore the roster of AWS services and illustrate the way to make applications in AWS						
To gain knowledge in the working of Windows Azure and Storage services offered by Windows Azure						
To develop the cloud application using various programming model of Hadoop and Aneka						

UNIT – I	VIRTUALIZATION AND VIRTUALIZATION INFRASTRUCTURE	9
Basics of Virtual Machines - Process Virtual Machines – System Virtual Machines – Emulation – Interpretation – Binary Translation - Taxonomy of Virtual Machines. Virtualization –Management Virtualization — Hardware Maximization – Architectures – Virtualization Management – Storage Virtualization – Network Virtualization-Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters and Resource Management – Virtualization for data center automation		
UNIT – II	CLOUD PLATFORM ARCHITECTURE	9

 HoD/BOS Chairman

 Principal

Cloud Computing: Definition, Characteristics - Cloud deployment models: public, private, hybrid, community – Categories of cloud computing: Everything as a service: Infrastructure, platform, software- A Generic Cloud Architecture Design – Layered cloud Architectural Development – Architectural Design Challenges

UNIT – III AWS CLOUD PLATFORM - IAAS 9

Amazon Web Services: AWS Infrastructure- AWS API- AWS Management Console - Setting up AWS Storage - Stretching out with Elastic Compute Cloud - Elastic Container Service for Kubernetes- AWS Developer Tools: AWS Code Commit, AWS Code Build, AWS Code Deploy, AWS Code Pipeline, AWS code Star - AWS Management Tools: Cloud Watch, AWS Auto Scaling, AWS control Tower, Cloud Formation, Cloud Trail, AWS License Manage

UNIT – IV PAAS CLOUD PLATFORM 9

Windows Azure: Origin of Windows Azure, Features, The Fabric Controller – First Cloud APP in Windows Azure- Service Model and Managing Services: Definition and Configuration, Service runtime API- Windows Azure Developer Portal- Service Management API- Windows Azure Storage Characteristics-Storage Services- REST API- Blops

UNIT – V PROGRAMMING MODEL 9

Introduction to Hadoop Framework - Mapreduce, Input splitting, map and reduce functions, specifying input and output parameters, configuring and running a job –Developing Map Reduce Applications - Design of Hadoop file system –Setting up Hadoop Cluster- Aneka: Cloud Application Platform, Thread Programming, Task Programming and Map-Reduce Programming in Aneka

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Employ the concepts of virtualization in the cloud computing
CO2	Identify the architecture, infrastructure and delivery models of cloud computing
CO3	Develop the Cloud Application in AWS platform
CO4	Apply the concepts of Windows Azure to design Cloud Application
CO5	Develop services using various Cloud computing programming models.

Subject Code	Subject Name	Category	L	T	P	C
IF24001	DESIGN THINKING	OEC	3	0	0	3
Course Objectives:						
• To provide a sound knowledge in UI & UX						
• To understand the need for UI and UX						
• Research Methods used in Design						
• Tools used in UI & UX						
• Creating a wireframe and prototype						

UNIT – I	UX LIFECYCLE TEMPLATE	9
Introduction. A UX process lifecycle template. Choosing a process instance for your project. The system complexity space. Meet the user interface team. Scope of UX presence within the team. More about UX lifecycles. Business Strategy. Value Innovation. Validated User Research. Killer UX Design. The Blockbuster Value Proposition. What Is a Value Proposition?		
UNIT – II	CONTEXTUAL INQUIRY	9
The system concept statement. User work activity data gathering. Look for emotional aspects of work practice. Abridged contextual inquiry process. Data-driven vs. model-driven inquiry. Organizing concepts: work roles and flow model. Creating and managing work activity notes. Constructing your work activity affinity diagram (WAAD). Abridged contextual analysis process. History of affinity diagrams		
UNIT – III	DESIGN THINKING, IDEATION, AND SKETCHING	9
Design-informing models: second span of the bridge . Some general “how to” suggestions. A New example domain: slideshow presentations. User models. Usage models. Work environment models. Barrier summaries. Model consolidation. Protecting your sources. Abridged methods for design-informing models extraction. Design paradigms. Design thinking. Design perspectives. User personas. Ideation. Sketching		
UNIT – IV	UX GOALS, METRICS, AND TARGETS	9
Introduction. UX goals. UX target tables. Work roles, user classes, and UX goals. UX measures. Measuring instruments. UX metrics. Baseline level. Target level. Setting levels. Observed results. Practical tips and cautions for creating UX targets. How UX targets help manage the user experience engineering process		
UNIT – V	ANALYSING USER EXPERIENCE	9
Sharpening Your Thinking Tools. UX Research and Strength of Evidence. Agile Personas. How to Prioritize Usability Problems. Creating Insights, Hypotheses and Testable Design Ideas. How to Manage Design Projects with User Experience Metrics. Two Measures that Will Justify Any Design Change. Evangelizing UX Research. How to Create a User Journey Map. Generating Solutions to Usability Problems. Building UX Research Into the Design Studio Methodology. Dealing with Common objections to UX Research. The User Experience Debrief Meeting. Creating a User Experience Dashboard		
		Total Contact Hours : 45

HoD/BOS Chairman

Principal

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Hands on Design Thinking process for a product
CO2	Defining the Look and Feel of any new Project
CO3	Create a Sample Pattern Library for that product (Mood board, Fonts, Colors based on UI principles)
CO4	Identify a customer problem to solve.
CO5	Conduct end-to-end user research - User research, creating personas, Ideation process (User stories, Scenarios), Flow diagrams, Flow Mapping

Textbooks:	
1.	Build UI for user Applications
2.	Use the UI Interaction behaviors and principles
3.	Evaluate UX design of any product or application

Reference books/other materials/webresources:	
1.	Demonstrate UX Skills in product development
2.	Implement Sketching principles

DS24001	BIG DATA ANALYTICS	OEC	3	0	0	3
Course Objectives:						
• To understand the basics of big data analytics						
• To understand the search methods and visualization						
• To learn mining data streams						
• To learn frameworks						
• To gain knowledge on R language						

UNIT – I	INTRODUCTION TO BIG DATA	9
Introduction to Big Data Platform – Challenges of Conventional Systems - Intelligent data analysis –Nature of Data - Analytic Processes and Tools - Analysis Vs Reporting - Modern Data Analytic Tools- Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.		
UNIT – II	SEARCH METHODS AND VISUALIZATION	9
Search by simulated Annealing – Stochastic, Adaptive search by Evaluation – Evaluation Strategies –Genetic Algorithm – Genetic Programming – Visualization – Classification of Visual Data Analysis Techniques – Data Types – Visualization Techniques – Interaction techniques – Specific Visual data analysis Techniques.		

HoD/BOS Chairman

Principal

UNIT – III	MINING DATA STREAMS	9
Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.		
UNIT – IV	FRAMEWORKS	9
MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed File Systems – Case Study- Preventing Private Information Inference Attacks on Social Networks- Grand Challenge: Applying Regulatory Science and Big Data to Improve Medical Device Innovation.		
UNIT – V	R LANGUAGE	9
Overview, Programming structures: Control statements -Operators -Functions -Environment and scope issues -Recursion -Replacement functions, R data structures: Vectors -Matrices and arrays -Lists -Data frames -Classes, Input/output, String manipulations.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	understand the basics of big data analytics
CO2	use Hadoop, Map Reduce Framework.
CO3	identify the areas for applying big data analytics for increasing the business outcome.
CO4	gain knowledge on R language
CO5	Contextually integrate and correlate large amounts of information to gain faster insights.

Textbooks:

HoD/BOS Chairman

Principal

Subject Code	Subject Name	Category	L	T	P	C
NC24001	INTERNET OF THINGS AND CLOUD	OEC	3	0	0	3

Course Objectives:

- Objective 1: To understand Smart Objects and IoT Architectures
- Objective 2: To learn about various IOT-related protocols
- Objective 3: To build simple IoT Systems using Arduino and Raspberry Pi.
- Objective 4: To understand data analytics and cloud in the context of IoT
- Objective 5: To develop IoT infrastructure for popular applications

UNIT – I	FUNDAMENTALS OF IoT	9
Introduction to IoT – IoT definition – Characteristics – IoT Complete Architectural Stack – IoT enabling Technologies – IoT Challenges. Sensors and Hardware for IoT – Hardware Platforms – Arduino, Raspberry Pi, Node MCU. A Case study with any one of the boards and data acquisition from sensors.		
UNIT – II	PROTOCOLS FOR IoT	9
Infrastructure protocol (IPV4/V6/RPL), Identification (URIs), Transport (Wifi, Lifi, BLE), Discovery, Data Protocols, Device Management Protocols. – A Case Study with MQTT/CoAP usage-IoT privacy, security and vulnerability solutions.		
UNIT – III	CASE STUDIES/INDUSTRIAL APPLICATIONS	9
Case studies with architectural analysis: IoT applications – Smart City – Smart Water – Smart Agriculture – Smart Energy – Smart Healthcare – Smart Transportation – Smart Retail – Smart waste management.		
UNIT – IV	CLOUD COMPUTING INTRODUCTION	9
Introduction to Cloud Computing - Service Model – Deployment Model- Virtualization Concepts – Cloud Platforms – Amazon AWS – Microsoft Azure – Google APIs.		
UNIT – V	IoT AND CLOUD	9
IoT and the Cloud - Role of Cloud Computing in IoT - AWS Components - S3 – Lambda – AWS IoT Core -Connecting a web application to AWS IoT using MQTT- AWS IoT Examples. Security Concerns, Risk Issues, and Legal Aspects of Cloud Computing- Cloud Data Security		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the various concept of the IoT and their technologies.
CO2	Develop IoT application using different hardware platforms.
CO3	Implement the various IoT Protocols.
CO4	Understand the basic principles of cloud computing.
CO5	Develop and deploy the IoT application into cloud environment.

Textbooks:

Subject Code	Subject Name	Category	L	T	P	C
MX24001	MEDICAL ROBOTICS	OEC	3	0	0	3

Course Objectives:

- To explain the basic concepts of robots and types of robots
- To discuss the designing procedure of manipulators, actuators and grippers.
- To impart knowledge on various types of sensors and power sources.
- To explore various applications of Robots in Medicine.
- To impart knowledge on wearable robots.

UNIT – I	INTRODUCTION TO ROBOTICS	9
Introduction to Robotics, Overview of robot subsystems, Degrees of freedom, configurations and concept of workspace, Dynamic Stabilization.		
Sensors and Actuators		
Sensors and controllers, Internal and external sensors, position, velocity and acceleration sensors, Proximity sensors, force sensors Pneumatic and hydraulic actuators, Stepper motor control circuits, End effectors, Various types of Grippers, PD and PID feedback actuator models.		
UNIT – II	MANIPULATORS & BASIC KINEMATICS	9
Construction of Manipulators, Manipulator Dynamic and Force Control, Electronic and pneumatic manipulator, Forward Kinematic Problems, Inverse Kinematic Problems, Solutions of Inverse Kinematic problems.		
Navigation and Treatment Planning: Variable speed arrangements, Path determination – Machinery vision, Ranging – Laser – Acoustic, Magnetic, fiber optic and Tactile sensor.		
UNIT – III	SURGICAL ROBOTS	9
Da Vinci Surgical System, Image guided robotic systems for focal ultrasound based surgical applications, System concept for robotic Tele-surgical system for off-pump, CABG surgery, Urologic applications, Cardiac surgery, Neuro-surgery, Pediatric and General Surgery, Gynecologic Surgery, General Surgery and Nanorobotics. Case Study		
UNIT – IV	REHABILITATION AND ASSISTIVE ROBOTS	9
Pediatric Rehabilitation, Robotic Therapy for the Upper Extremity and Walking, Clinical-Based Gait Rehabilitation Robots, Motion Correlation and Tracking, Motion Prediction, Motion Replication. Portable Robot for Tele rehabilitation, Robotic Exoskeletons – Design considerations, Hybrid assistive limb. Case Study		
UNIT – V	WEARABLE ROBOTS	9
Augmented Reality, Kinematics and Dynamics for Wearable Robots, Wearable Robot technology, Sensors, Actuators, Portable Energy Storage, Human-robot cognitive interaction (cHRI), Human – robot physical interaction (pHRI), Wearable Robotic Communication - case study		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Describe the configuration, applications of robots and the concept of grippers and actuators.
CO2	Explain the functions of manipulators and basic kinematics.

HoD/BOS Chairman

Principal

CO3	Describe the application of robots in various surgeries.
CO4	Design and analyze the robotic systems for rehabilitation.
CO5	Design the wearable robots.

VE24001	EMBEDDED AUTOMATION	OEC	3	0	0	3

Course Objectives:

- To learn about the process involved in the design and development of real-time embedded system.
- To develop the embedded C programming skills on 8-bit microcontroller.
- To study about the interfacing mechanism of peripheral devices with 8-bit Microcontrollers.
- To learn about the tools, firmware related to microcontroller programming.
- To build a home automation system.

UNIT – I	INTRODUCTION TO EMBEDDED C PROGRAMMING	9
-----------------	---	----------

C Overview and Program Structure - C Types, Operators and Expressions - C Control Flow – C Functions and Program Structures - C Pointers And Arrays - FIFO and LIFO - C Structures -Development Tools

UNIT – II	AVR MICROCONTROLLER	9
------------------	----------------------------	----------

ATMEGA 16 Architecture - Nonvolatile and Data Memories - Port System - Peripheral Features : Time Base, Timing Subsystem, Pulse Width Modulation, USART, SPI, Two Wire Serial Interface, ADC, Interrupts - Physical and Operating Parameters.

UNIT – III	HARDWARE AND SOFTWARE INTERFACING WITH 8-BIT SERIES CONTROLLERS	9
-------------------	--	----------

Lights and Switches - Stack Operation - Implementing Combinational Logic - Expanding I/O - Interfacing Analog To Digital Convertors - Interfacing Digital To Analog Convertors – LED

HoD/BOS Chairman

Principal

Displays : Seven Segment Displays, Dot Matrix Displays - LCD Displays - Driving Relays - Stepper Motor Interface - Serial EEPROM - Real Time Clock - Accessing Constants Table - Arbitrary Waveform Generation - Communication Links - System Development Tools.

UNIT – IV VISION SYSTEM

9

Fundamentals of Image Processing - Filtering - Morphological Operations - Feature Detection and Matching - Blurring and Sharpening - Segmentation - Thresholding - Contours – Advanced Contour Properties - Gradient - Canny Edge Detector - Object Detection – Background Subtraction.

UNIT – V HOME AUTOMATION

9

Home Automation - Requirements - Water Level Notifier - Electric Guard Dog - Tweeting Bird Feeder - Package Delivery Detector - Web Enabled Light Switch - Curtain Automation – Android Door Lock - Voice Controlled Home Automation - Smart Lighting - Smart Mailbox – Electricity Usage Monitor -Proximity Garage Door Opener - Vision Based Authentic Entry System

Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Analyze the 8-bit series microcontroller architecture, features and pin details.
CO2	Write embedded C programs for embedded system application.
CO3	Design and develop real time systems using AVR microcontrollers.
CO4	Design and develop the systems based on vision mechanism.
CO5	Design and develop a real time home automation system.

Textbooks:

1. Dhananjay V. Gadre, "Programming and Customizing the AVR Microcontroller", McGraw- Hill, 2001.
2. Joe Pardue, "C Programming for Microcontrollers ", Smiley Micros, 2005.

Reference books/other materials/webresources:

1. Steven F. Barrett, Daniel J. Pack, "ATMEL AVR Microcontroller Primer : Programming and Interfacing", Morgan & Claypool Publishers, 2012
2. Mike Riley, "Programming Your Home - Automate With Arduino, Android and Your Computer", the Pragmatic Programmers, Llc, 2012.

nanocomposites.
To explore metal-based nanocomposites, their synthesis techniques, and functional properties.
To understand the design, characterization, and applications of polymer-based nanocomposites.
To introduce natural and synthetic biomaterial-based nanocomposites and their biomedical applications.
To familiarize students with technological applications of nanocomposites in textiles, cosmetics, and food industries.

UNIT – I	BASICS OF NANOCOMPOSITES	9
Nomenclature, Properties, features and processing of nanocomposites. Sample Preparation and Characterization of Structure and Physical properties. Designing, stability and mechanical properties and applications of super hard nanocomposites.		
UNIT – II	METAL BASED NANOCOMPOSITES	9
Metal-metal nanocomposites, some simple preparation techniques and their properties. Metal-Oxide or Metal-Ceramic composites, Different aspects of their preparation techniques and their final properties and functionality. Fractal based glass-metal nanocomposites, its designing and fractal dimension analysis. Core-Shell structured nanocomposites		
UNIT – III	POLYMER BASED NANOCOMPOSITES	9
Preparation and characterization of diblock Copolymer based nanocomposites; Polymer Carbon nanotubes based composites, their mechanical properties, and industrial possibilities.		
UNIT – IV	NANOCOMPOSITE FROM BIOMATERIALS	9
Natural nanocomposite systems - spider silk, bones, shells; organic-inorganic nanocomposite formation through self-assembly. Biomimetic synthesis of nanocomposites material; Use of synthetic nanocomposites for bone, teeth replacement.		
UNIT – V	NANOCOMPOSITE TECHNOLOGY	9
Nanocomposite membrane structures- Preparation and applications. Nanotechnology in Textiles and Cosmetics-Nano-fillers embedded polypropylene fibers – Soil repellence, Lotus effect - Nano finishing in textiles (UV resistant, anti-bacterial, hydrophilic, self-cleaning, flame retardant finishes), Sun-screen dispersions for UV protection using titanium oxide – Colour cosmetics. Nanotechnology in Food Technology - Nanopackaging for enhanced shelf life - Smart/Intelligent packaging.		
		Total Contact Hours : 45

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Explain the basic concepts, processing methods, and mechanical behavior of nanocomposites.
CO2	Describe preparation techniques and analyze the properties of various metal-based nanocomposites.
CO3	Evaluate the synthesis and mechanical performance of polymer-based nanocomposites for industrial use.
CO4	Analyze the role of biomaterials in forming nanocomposites and their application in biomedicine.
CO5	Assess the use of nanocomposites in consumer technologies such as textiles, cosmetics, and food packaging.

Textbooks:
1. Introduction to Nanocomposite Materials. Properties, Processing, Characterization-

Subject Code	Subject Name	Category	L	T	P	C
BY24001	IPR, BIOSAFETY AND ENTREPRENEURSHIP	OEC	3	0	0	3

Course Objectives:

- To introduce the fundamentals of Intellectual Property Rights (IPR) and its significance in research and development. - To familiarize students with various international treaties, patent filing processes, and legal implications of patents. - To impart knowledge on biosafety principles, containment levels, and national/international biosafety guidelines. - To understand the regulation and risk assessment of genetically modified organisms (GMOs) and related international protocols. - To develop entrepreneurial skills and explore opportunities in biotechnology and small-scale enterprises.

UNIT – I	IPR	9
Intellectual property rights – Origin of the patent regime – Early patents act & Indian pharmaceutical industry – Types of patents – Patent Requirements – Application preparation filing and prosecution – Patentable subject matter – Industrial design, Protection of GMO's IP as a factor in R&D, IP's of relevance to biotechnology and few case studies.		
UNIT – II	AGREEMENTS, TREATIES AND PATENT FILING PROCEDURES	9
History of GATT Agreement – Madrid Agreement – Hague Agreement – WIPO Treaties – Budapest Treaty – PCT – Ordinary – PCT – Conventional – Divisional and Patent of Addition – Specifications – Provisional and complete – Forms and fees Invention in context of “prior art” – Patent databases – Searching International Databases – Country-wise patent searches – PATENT Scope (WIPO) – IPO, etc National & PCT filing procedure – Time frame and cost –		

HoD/BOS Chairman

Principal

Status of the patent applications filed – Precautions while patenting – disclosure/non-disclosure – Financial assistance for patenting – Introduction to existing schemes Patent licensing and agreement Patent infringement – Meaning, scope, litigation, case studies	
UNIT – III	BIOSAFETY
Introduction – Historical Backround – Introduction to Biological Safety Cabinets – Primary Containment for Biohazards – Biosafety Levels – Biosafety Levels of Specific Microorganisms – Recommended Biosafety Levels for Infectious Agents and Infected Animals – Biosafety guidelines – Government of India.	
UNIT – IV	GENETICALLY MODIFIED ORGANISMS
Definition of GMOs & LMOs – Roles of Institutional Biosafety Committee – RCGM – GEAC etc. for GMO applications in food and agriculture – Environmental release of GMOs – Risk Analysis – Risk Assessment – Risk management and communication – Overview of National Regulations and relevant International Agreements including Cartagena Protocol.	
UNIT – V	ENTREPRENEURSHIP DEVELOPMENT
Introduction – Entrepreneurship Concept – Entrepreneurship as a career – Entrepreneurial personality – Characteristics of successful Entrepreneur – Factors affecting entrepreneurial growth – Entrepreneurial Motivation – Competencies – Mobility – Entrepreneurship Development Programmes (EDP) - Launching Of Small Enterprise - Definition, Characteristics – Relationship between small and large units – Opportunities for an Entrepreneurial career – Role of small enterprise in economic development – Problems of small scale industries – Institutional finance to entrepreneurs - Institutional support to entrepreneurs.	
Total Contact Hours : 45	

Course Outcomes:	Upon completion of the course students should be able to:
CO1	Understand the scope, types, and procedures involved in Intellectual Property Rights (IPR) and patents.
CO2	Analyze global treaties and agreements related to patent protection and apply patent filing procedures.
CO3	Apply biosafety guidelines to laboratory practices and interpret safety levels for various biohazards.
CO4	Evaluate biosafety regulations and risk management strategies associated with GMOs and LMOs.
CO5	Demonstrate entrepreneurial knowledge by identifying opportunities and challenges in establishing small enterprises.
